ERRATA.

- Page 109, last line in the table, omit the word "adults."
- Page 110, table following paragraph 146. The figures for 1891 in this table are not final. The final results will be found in an appendix to the second volume.
- Page 125, in table at head of page, last column, fourth line, read "28.20," instead of "27.23"; sixth line, read "22.76," instead of ".73."
- Page 292, table following paragraph 430, last line, read "£94 7s. 9d.," "£93 0s. 0d.," and "£3 18s. 6d.," instead of "£94 12s. 4d.," "£93 4s. 7d.," and "£3 18s. 2d."
- Page 294, table following paragraph 432, last line but one, read "£94 7s. 9d.," and "£3 16s. 8d," instead of "£94 12s. 4d.," and "£3 16s. 5d.;" and in last line, read "250,000," instead of "25,000."
- Page 295, table following paragraph 434, first line, last column but one, read "£0 18 11," instead of "£8 18 11."
- Page 362, paragraph 582, twelfth line, read "263,119" instead of "265,100;" also, thirteenth line, read "142,419," instead of "144,400;" also, last line, read "20," instead of "23."
- Page 363, table following paragraph 583, last line, read "6,950" and "4.88," instead of "6,150" and 4.26;" also in line of "Means," read "4,402" and "4.14," instead of "4,359" and "4.11."

VICTORIAN YEAR-BOOK, 1892.

INTRODUCTORY REMARKS.

- 1. The land now embraced within the limits of the colony of Discovery of Victoria was first discovered by Captain James Cook, of the Royal Navy, in command of His Majesty's ship Endeavour. This vessel had been sent to Tahiti to observe the transit of Venus over the sun's disc, and Cook, who was in command, having accomplished that object, and having also made a survey of New Zealand, continued his course westward in order to explore the eastern coast of "Terra Australis Incognita." He made the land on the 19th April, 1770, and estimated a prominent point—which he named after the first discoverer, Lieutenant Hicks, one of the officers of his vessel—to be in latitude 38° S., longitude 211° 7′ W. (148° 53′ E.);* he, however, did not attempt to land, but rounding Cape Howe, passed on to the east coast, and carefully examined portions of it, especially Botany Bay, near to which Sydney, the present capital of New South Wales, It may be observed that Point Hicks appears to be identical with the present Cape Eyerard, in Gippsland, situated about midway between Cape Howe and the mouth of the Snowy River.
- 2. The first permanent settlement in Victoria was formed at First Settle-Portland Bay, by Mr. Edward Henty, from Van Diemen's Land—as Tasmania was then called—who landed on the 19th November, 1834, and soon commenced to till the soil, run and breed stock, and carry on whaling operations. Others followed, but the absence of good land in the immediate vicinity of the port, and the openness of the bay, which rendered it unsafe for shipping during the prevalence of certain winds, caused it to be considered an unsuitable site for a capital, which was eventually founded at the northern end of Port Phillip Bay by two parties—one led by John Batman, who landed on the 29th May, 1835, and the other by John Pascoe Fawkner, whose party arrived at the site of Melbourne on the 28th August of the same year. Both of these were from Van Diemen's Land, and they were soon followed by others from the same island, and from Sydney, who

 \mathbf{B}

^{*} The latitude of Cape Everard, according to present computations, is 37° 49' S., and the longitude 149° 17' E.

brought stock with them, and commenced to push their way into the interior. These were met by Major (afterwards Lieutenant-Colonel Sir) Thomas Mitchell, who, entering from New South Wales on the north, and traversing a considerable portion of the, as yet, unknown territory, was so struck with its wondrous capabilities that he named it Australia Felix—a title the aptness of which a subsequent knowledge of the geniality of its climate, the excellence of its soil, and the then unsuspected richness of its mineral treasures, has proved to be fully justified.

Constitution granted to Victoria.

3. A constitution, giving responsible Government to the colony, was proclaimed on the 23rd November, 1855, and since then, although political struggles have been frequent and party feeling has at times run high, these circumstances have had no permanent effect in setting class against class, or in any way lessening the good feeling which exists between all sections of the community. At times commerce has been depressed, but this has soon revived, and the material prosperity the colony has, upon the whole, enjoyed is, perhaps, without a parallel in the history of any other country.

Progress since 1855

4. When the Constitution was proclaimed the population of the colony numbered 364,000, it now numbers 1,157,678; the land in cultivation amounted to 115,000 acres, it now amounts to over 2,600,000 acres; the bushels of wheat grown in a year numbered 1,150,000, they now exceed 12,000,000, and in one year (1883-4) they amounted to 15,500,000; the sheep numbered 4,600,000, they now number 12,000,000; the cattle numbered 530,000, they now number 1,700,000; the horses numbered 33,000, they now number not less than 436,000; the public revenue amounted to £2,728,000, it now amounts to over £8,500,000; the total value of imports and exports was £25,500,000, it now exceeds £36,000,000; and this, although the export of gold has fallen off from £11,000,000 in the former to a little over £2,739,000 in the past year. For further evidences of progress the reader is referred to the statistics given throughout this work.

Principal events.

- 5. The following are the dates of some of the principal events connected with the discovery and history* of Victoria:—
- 1770. April 19th.—Victorian land first discovered by Capt. James Cook, R.N., in command of His Majesty's ship *Endeavour*.—("Point Hicks," believed to be the present Cape Everard in Gippsland.)

^{*} A detailed statement of the Discovery and Early History of the territory now embraced within the limits of the Colony of Victoria was given in the *Victorian Year-Book*, 1884-5, page 10 et. seq.

- 1798. June 4th.—Western Port discovered and entered by Surgeon George Bass, R.N.
 - ,, Nov. and Dec.—The existence of a strait between Australia and Tasmania proved by Midshipman Matthew Flinders, R.N., who, accompanied by Bass, sailed round the latter island in the sloop Norfolk.
- 1800. Dec. 4th to 9th.—Bass's Straits first sailed through from the westward by Lieutenant James Grant, R.N., in H.M.S. Lady Nelson, a gun brig of sixty tons burthen, bound from England to Port Jackson. On this occasion Grant discovered and gave the present names to Capes Bridgewater, Nelson, and Sir William Grant, Portland Bay, the Lawrence and Lady Julia Percy Islands, Capes Otway, Patton, Liptrap, etc.
- 1802. January 5th.—Entrance to Port Phillip Bay discovered by Acting-Lieutenant John Murray, R.N., in the *Lady Nelson*. Heads entered by the launch on 2nd February, and by the vessel on 15th February.
 - ,, April 26th.—Port Phillip Bay entered and examined by Flinders, who had been promoted to the rank of Commander. He was not aware that the Bay had been previously discovered by Murray.
- 1803. Jan. and Feb.—Port Phillip Bay surveyed and the Yarra and Saltwater Rivers discovered by Charles Grimes, Surveyor-General of New South Wales, and party.
 - " October 7th.—Attempt to colonize Port Phillip by Colonel David Collins in charge of a party of convicts.
- 1804. January 27th.—Port Phillip abandoned by Collins as unfit for settlement.
- 1824. Decem. 16th.—Hume and Hovell arrived at Corio Bay, having travelled overland from Sydney.
- Attempt made early in the year to colonize Western Port, on its eastern side, near the site of the present township of Corinella, by Captain S. Wright, of H.M. 3rd Regiment, the Buffs, in charge of a party of convicts. This expedition was sent from New South Wales in consequence of a report that the French contemplated a settlement on the south coast of Australia. This apprehension having been found to be groundless, and the locality being sterile and scrubby, the establishment was withdrawn early in 1828.
- 1834. Novem. 19th.—Permanent settlement founded at Portland Bay by Edward Henty.
- 1835. May

 29th.—John Batman arrived in Port Phillip and made a treaty with the natives for a grant of 600,000 acres of land. This treaty was afterwards disallowed by the Imperial Government.
 - "August 28th.—John Pascoe Fawkner's party sailed up the Yarra in the *Enterprise* and founded Melbourne on the site previously selected by Batman. (Fawkner followed shortly after, and landed on the 18th October.)
- 1836. April to Oct.—Major (afterwards Lieutenant-Colonel Sir) Thomas Livingstone Mitchell made extensive explorations in the Port Phillip District, the western portion of which he named Australia Felix.
 - " Septem. 29th.—Regular Government established under Captain William Lonsdale, who was sent from Sydney to act as Resident Magistrate of the Port Phillip District.

- 1837. March 2nd.—Governor Sir Richard Bourke arrived from Sydney and gave the name of Melbourne to the metropolis of the new settlement.
 - June 1st.—First sale of Crown lands took place in Melbourne. Average price of half-acre town lots, £35.
- 1838. Septem. 12th.—First census of the colony. Population enumerated, 3,511, viz., 3,080 males and 431 females.
- 1839. Septem. 30th.—Mr. Charles Joseph La Trobe arrived from Sydney and took charge of the Port Phillip District under the title of Superintendent. The territory over which he exercised jurisdiction was much smaller than the present colony of Victoria, being bounded on the east and west by the 146th and 141st meridians and on the north by the 36th parallel. (For boundaries of Victoria see paragraph 6 post.)
- 1841. March 2nd.—Second census. Population enumerated, 11,738, viz., 8,274 males and 3,464 females.
- 1842. August 12th—Melbourne incorporated as a Town by Act of the Legislature of New South Wales 6 Vict. No. 7.
- 1846. March 2nd.—Third census. Population enumerated, 32,879, viz., 20,184 males and 12,695 females.
- 1847. June 26th.—Royal Letters Patent erecting the Town of Melbourne into a City signed at this date; gazetted in Sydney on the 5th February, 1848.
- 1849. October 12th.—Geelong incorporated as a Town by Act of the Legislature of New South Wales 13 Vict. No. 40.
- 1851. February 6th.—"Black Thursday."—A day of tremendous heat and destructive fire, whereby a large tract of country was devastated. Some lives were lost, numbers of sheep, cattle, and horses perished, and a vast amount of property was destroyed.
 - " March 2nd.—Fourth census. Population enumerated, 77,345, viz., 46,202 males and 31,143 females.
 - " July 1st.—Port Phillip separated from New South Wales and erected into an independent colony under the name of Victoria.
 - ,, July and Aug.—Discovery of gold in Victoria.
- 1853. February 8th.—Road districts (the origin of the present shires) established by Act 16 Vict. No. 40.
- 1854. April 26th.—Fifth census. Population enumerated 236,798, viz., 155,887 males and 80,911 females.
 - " Nov. and Dec.—Riots on Ballarat gold-field. (Eureka Stockade taken on the 3rd December.)
 - " Decem. 29th.—Municipal institutions (the origin of the present cities, towns, and boroughs) established by Act 18 Vict. No. 15.
- 1855. Nov. 23rd.—Constitution proclaimed in Victoria.
- 1856. March 19th.—The ballot as a means of electing members of both Houses of Parliament prescribed by Act 19 Vict. No. 12.
- 1857. March 29th.—Sixth census. Population enumerated, 410,766, viz., 264,334 males and 146,432 females.
 - " August 27th.—Property qualification of members of the Legislative Assembly abolished by Act 21 Vict. No. 12.
 - ,, Novem. 24th.—Universal manhood suffrage for electors of the Legislative Assembly made law by Act 21 Vict. No. 33.

- 1858. Decem. 17th.—Number of members of the Legislative Assembly increased to 78, to be returned for 49 Electoral Districts.
- 1861. April 7th.—Seventh census. Population enumerated, 540,322, viz., 328,651 males and 211,671 females.
 - " October … Conference, attended by representatives of Victoria, New South Wales, Queensland, and South Australia, met in Melbourne for the purpose of endeavouring to secure uniformity in the collection and compilation of their annual statistics.
- 1867. February 6th.—Customs tariff imposing import duties on a number of articles with the view of affording protection to native industry came into operation under Act 31 Vic. No. 306.
- 1869. January 1st.—Property qualification of members and electors of the Legislative Council reduced by Act 32 Vict. No. 334.
- 1871. April 2nd.—Eighth census. Population enumerated, 731,528, viz., 401,050 males and 330,478 females.
 - " May 17th.—Import duties on many articles increased under Act 35 Vict. No. 400, with the view of affording further protection to native industry.
- 1875. January 15th.—Conference in Hobart Town, convened for the purpose of endeavouring to secure uniformity in statistical collection and compilation, held its first meeting. Representatives of Victoria, New South Wales, South Australia, and Tasmania attended. Conference closed 26th January.
- 1876. Novem. 2nd.—Number of members of the Legislative Assembly increased to 86, and boundaries of Electoral Districts altered so as to increase the number to 55, by Act 40 Vict. No. 548.
- 1878. Decem. 28th.—The Hon. Graham Berry, Premier, and Professor C. H. Pearson, member of the Legislative Assembly of Victoria, with Mr. H. H. Hayter as secretary, started for England on a mission from the Victorian to the Imperial Government, the object being to endeavour to induce the latter to amend the Victorian Constitution Act in regard to certain matters (affecting chiefly the relations between the two Houses of the Legislature) in which the Constitution had been found to be unworkable. The mission, which was only partially successful, returned to Victoria about the middle of 1879.
- 1880. February 6th.—Fortnightly mail contract service between Victoria and England commenced.
 - October 1st.—First Victorian International Exhibition opened in Melbourne.
 It was closed 30th April, 1881.
- 3rd.—Ninth census of Victoria and first simultaneous census of all the Australasian Colonies. Population enumerated—in Victoria, 862,346, viz., 452,083 males and 410,263 females; in all the Australasian Colonies, 2,815,924, viz., 1,526,121 males and 1,289,803 females.
 - Novem. 28th.—Property qualification of members and electors of the Legislative Council further reduced, number of provinces increased to 14, number of members increased to 42, and tenure of seats shortened by Act 45 Vict. No. 702.
- 1884. February 1st.—Victorian Railways placed under the control and management of three Commissioners, under Act 47 Vict. No. 767.

- 1884. Decem. 31st.—Patronage in the public service abolished with respect to appointments and promotions, and "a just and equitable system in lieu thereof, which will enable all persons who have qualified themselves in that behalf to enter the public service without favour or recommendation other than their own merits and fitness for the position," established under Act 47 Vict. No. 773, which Statute also provided for the appointment of a Public Service Board, consisting of three members, to administer its provisions.
- 1885. December 9th.—Imperial Act constituting a Federal Council of Australasia brought into operation in respect to Victoria by Act 49 Vict. No. 843. First meeting of Federal Council opened in Tasmania, 25th January, 1886.
- 1887. April 4th.—Conference between representatives of the principal colonies of the Empire and the Imperial Government, summoned chiefly for the purpose of considering questions of defence and postal and telegraphic communication, held its first meeting in London, Victoria sending four representatives. Conference closed 9th May.
- 1888. January 18th.—Hundredth anniversary of the first settlement in Australia. Governors, ministers, members of Parliament, and corporation officials of all the Australasian Colonies, together with a large number of citizens, proceeded to Sydney to join in celebrating the occasion.
 - " February 1st.—Weekly mail contract service between Australia and England commenced, by means of vessels of the Peninsular and Oriental, and Orient services running alternately.
- 1888. August 1st.—Second Victorian International Exhibition opened in Melbourne. It was closed 31st January, 1889.
 - " August 28th.—First meeting of the Australasian Association for the Advancement of Science. Held in Sydney.
 - " Decem. 22nd.—Number of members of the Legislative Council increased to 48 by Act 52 Vic. No. 995. Number of members of the Legislative Assembly increased to 95, and boundaries of Electoral Districts altered so that their number should be 84, and so that—with a few exceptions—only one member should represent each constituency, by Act 52 Vict. No. 1,008.
- 1890. February 6th.—Australasian Federation Conference, at which representatives from the seven principal Australasian colonies were present, held its first meeting. It was unanimously agreed that the best interests of the Australian colonies would be promoted by their early union under one Legislative and Executive Government; and that the legislatures of the respective colonies should be invited to appoint, during the present year, delegates to a National Australasian Convention, consisting of delegates empowered to report upon a scheme for a Federal Constitution. Conference closed 14th February.
 - ,, March 3rd.—Conference convened for the purpose of arranging for the collection and compilation of the returns of the census of 1891 upon a uniform principle, held its first meeting in Hobart, under the presidency of the Government Statist of Victoria. Representatives of Victoria, New South Wales, South Australia, Tasmania, and New Zealand attended. Conference closed 18th March.

- 2nd.—National Australasian Convention held in Sydney, at which a 1891. March Draft Bill "To constitute the Commonwealth of Australia" was framed and adopted. The Convention also recommended that provision be made by the Parliaments of the several colonies for submitting for the approval of the people of the colonies respectively the constitution of the Commonwealth of Australia as framed by the Convention. Delegates from the seven principal Australasian Colonies were present at the meetings of the Convention, which closed on the 9th April.
 - 5th.—Tenth census of Victoria, and second simultaneous census of April all the Australasian colonies. Population enumerated, in Victoria, 1,140,405, viz., 598,414 males and 541,991 females; in all the Australasian colonies 3,878,143, viz., 2,078,603 males, and 1,799,540 females.
- October 1st.—The Australasian colonies entered the Universal Postal Union. 1892. March 17th.—Railway Commissioners suspended by the Government. They resigned with a promise of compensation on the 7th June. Resignations accepted, 13th June.
- 6. Victoria is situated at the south-east extremity of the Australian Area and continent, of which it occupies about a thirty-fourth part, and con- of Victoria. tains about 87,884 square miles, or 56,245,760 acres. It is bounded on the north and north-east by the colony of New South Wales, from which it is separated by the River Murray, and by a right line running in a south-easterly direction from a place near the head waters of that stream, called The Springs, on Forest Hill, to Cape Howe. On the west it is bounded by South Australia, the dividing line being about 242 geographical miles in length, approximating to the position of the 141st meridian of east longitude, and extending from the River Murray to the sea. On the south and south-east its shores are washed by the Southern Ocean, Bass's Straits, and the Pacific Ocean. between the 34th and 39th parallels of south latitude, and the 141st and 150th meridians of east longitude. Its extreme length from east to west is about 420, its greatest breadth about 250, and its extent of coast-line nearly 600 geographical miles. Great Britain, exclusive of the Islands in the British seas, contains 88,309 square miles, and is therefore slightly larger than Victoria.
- 7. The area of the Australian continent is estimated to be some- Areas of what under three million square miles; but that area added to the areas of Tasmania and New Zealand, amounts to nearly three million one hundred thousand square miles. The following are the areas of the different colonies, which were computed by the late Surveyor-General of Victoria, Mr. A. J. Skene, from the map of Continental Australia compiled and engraved under his direction—the calculations being based on latitude and longitude and the generally-accepted figure of the earth:—

colonies.

AREAS OF AUSTRALASIAN COLONIES.

						Square Miles.
Victoria	• - •		•••	• • •		87,884
New South Wales					• • •	$309,\!175$
Queensland	• • •					668,224
South Australia				• • •		903,425*
Western Australia	a	• •	• • •	• • •		975,920
Total	Australia	• • •			• • •	2,944,628†
Tasmania	•••		•••			26,375
New Zealand	• • •	• • •	• • •	• • •		104,235
Total	Australasi	ia	•••	•••	•••	3,075,238

Area of Victoria and other colonies.

8. It will be noticed that Victoria is by far the smallest colony on the Australian continent, and the smallest of the group except If the whole continent were to be divided into 100 equal parts, the area of Victoria would embrace 3 such parts, that of New South Wales 10, that of Queensland 23, that of South Australia 30, and that of Western Australia 34. Victoria is thus less than a third of the size of New South Wales, little more than an eighth of that of Queensland, about a tenth of that of South Australia, and less than an eleventh of that of Western Australia.

Area of Europe, States.

9. It may be mentioned that the area of Australia, Tasmania, Australasia, and New Zealand is less by 680,764 square miles than the area of the and United Continent of Europe (3,756,002 square miles), but exceeds by 47,647 square miles the area of the United States, exclusive of the Alaska territory (3,027,591 square miles).

Extreme points of Victoria.

10. The southernmost point in Victoria, and consequently in the whole of Australia, is Wilson's Promontory, which lies in latitude 39° 8′ S., longitude 145° 26′ E.; the northernmost point is the place where the western boundary of the colony meets the Murray, latitude 34° 2′ S., longitude 140° 58′ E.; the point furthest east is Cape Howe, situated in latitude 37° 31′ S., longitude 149° 59′ E.; the most westerly point is the line of the whole western frontier, which, according to the latest correction, lies upon the meridian 140° 58' E., and extends from latitude 34° 2′ S. to latitude 38° 4′ S., or 242 geographical miles.

* Inclusive of the Northern Territory, estimated to contain 523,620 square miles. † Including islands and inland lakes. The area of Australia, as here given, is less by 85,888 square miles, and that of Australasia is less by 85,951 square miles, than the areas derived from the returns furnished officially by the various Governments, which are as follow:—

v ictoria	• •	• •	• •		87,884	Square Miles.
New South	Wales (exclus	sive of w	ater, 306	6,066	310,700	,,

- 11. The Melbourne Observatory is a building specially erected for Position of observatory purposes in the Government reserve, on the south side of the River Yarra. According to the latest computation, its latitude is 37° 49′ 53″ south, and its longitude 144° 58′ 32″ east.*
- 12. According to the latest and most reliable information, the Positions of following are the latitudes and longitudes of the capital cities of the asian different Australasian colonies, the positions being the observatories at Melbourne, Sydney, Brisbane, and Adelaide, the Barracks Observatory at Hobart, the Survey Office Observatory at Wellington, and the Government House at Perth:—

capitals.

13. From its geographical position, Victoria enjoys a climate more climate. suitable to the European constitution than any other colony upon the continent of Australia, resembling that of the more favoured portions of Southern Europe. In the thirty-three years ended with 1891, the maximum temperature in the shade was 111.2° Fahr., viz., on the 14th January, 1862; the minimum was 27°, viz., on the 21st July, 1869; and the mean was 57.4°. Upon the average, on four days during the year the thermometer rises above 100° in the shade; and generally on about three nights during the year it falls below freezing point. The maximum temperature in the sun ever recorded (i.e., since 1857) was 178.5°, viz., on the 4th January, 1862. atmospheric pressure, noted at an Observatory 91 feet above the sealevel, was, in the twenty-eight years ended with 1891, 29.94 inches; the average number of days on which rain fell was 131, and the average yearly rainfall was 25.56 inches.

^{*} For latitudes and longitudes of principal towns in, and most prominent places on the coast of, Victoria, see Vol. I., paragraph 12, of the Victorian Year-Book, 1889-90.

[†] For further information respecting the meteorological observations, not only for Melbourne, but also for other parts of the colony, see part "Vital Statistics," post. A chapter on "Meteorology and Climate" was given in the Victorian Year-Book, 1874.

PART I.—CONSTITUTION* AND GOVERNMENT.

Executive authority.

14. In Victoria the executive power is in the hands of a Governor appointed by the Crown, who acts under the advice of a responsible Ministry, consisting of 10 members.

Parliament of Victoria.

15. The legislative authority is vested in two Houses of Parliament, viz., the Upper House or Legislative Council, consisting of 48 members returned in fourteen provinces, each member being elected for six years, and the Lower House or Legislative Assembly, which consists of 95 members, elected for three years (unless dissolved sooner by the Governor), returned in 84 districts or electorates. qualification for the Upper House is as follows:—For members, the possession of freehold property of an annual value of £100; for electors, the possession of freehold property rated in some municipal district at not less than £10 per annum, or occupation of leasehold property of not less than £25 annual rating. Graduates of universities within the British dominions, barristers and solicitors, legally qualified medical practitioners, officiating ministers of religion, certificated schoolmasters, matriculated students of the Melbourne University, and officers in the army and navy—when not on active service, also have votes for the Legislative Council. There is no property qualification for members of the Lower House, and every male of 21 years of age or upwards, untainted by crime, is allowed a vote.

Persons incapable of becoming members. 16. Judges, ministers of religion; persons holding any office or place of profit under the Crown, or employed in the Public Service for salary, wages, or emolument (except Responsible Ministers); persons who are interested in any bargain or contract entered into on behalf of Her Majesty; uncertificated bankrupts and insolvents; and persons attainted of treason, or convicted of any felony or infamous offence within any part of Her Majesty's dominions, are incapable of being elected or continuing to be members of either House of Parliament; neither can the same person be a member of the two Houses at the same time.

Salaries of Ministers.

17. The Constitution Act, as amended by the Constitution Act Amendment Act 1890,† provides for the sum of £15,500 being set aside annually for the payment of ten Ministers, of whom not more than eight may be members of the Assembly, but at least four must be members of either the Council or Assembly.

^{*} For an account of the Victorian Constitution, see Victorian Year-Book, 1883-4, page 610 et seq. † Imperial Act, 18 and 19 Vict., Schedule I.; and 54 Vict. No. 1,075.

18. No person who is a member of either House of Parliament or Members has not ceased to be one for a period of six months may accept any office or place of profit under the Crown, except the office of Responsible Minister, Judge of the Supreme Court, Agent-General, President or Chairman of Committees of the Legislative Council, or Speaker or Chairman of Committees of the Legislative Assembly. Should be do so he is liable to forfeit the sum of £50 for every week he may hold such office or place, together with full costs of suit to any person who may sue for the same.

accept offices of

19. Members of the Legislative Council receive no payment for Payment of their attendance in Parliament, but every member of the Legislative Assembly who is not in receipt of any official salary or annual payment from the State, is entitled to receive reimbursement of his expenses in relation to his attendance in the discharge of his Parliamentary duties at the rate of £300 per annum out of the consolidated revenue.

20. The names of ratepayers in municipal districts are placed on Electors' the rolls of the Legislative Assembly—also on those of the Legislative Council if qualified—without action on their own part, but non-ratepayers, or property holders residing in another electorate and not enrolled as ratepayers, wishing to vote for either House of Parliament must take out "elector's rights," for which they are required to pay the sum of sixpence. These "rights" must be renewed every three years. In 1891 an Act* was passed with a view of more closely scrutinizing the electoral rolls, and of expunging therefrom the names of all persons not entitled to vote, including criminals, drunkards, etc.

21. Persons paying rates in several provinces or electoral districts Plural may vote in all such at the same election, but no one may vote more than once in the same province or electoral district, although he may have several properties rated independently therein.

> tary representation

22. In proportion to population Victoria has a smaller number of Parliamenrepresentatives in the Lower House of Parliament than any other Australasian colony, or than Greece, Servia, or Uruguay, but a larger in various countries. number than any other country. New Zealand comes next to Victoria, but is more largely represented than Servia or Uruguay. All the other Australasian colonies, except New South Wales, are more largely represented than any other countries. By the following table,† in which the countries are arranged according to the

^{*} Purification of Rolls Act 1891 (55 Vict. No. 1,242).
† This table has been compiled from official documents, many of the figures having been taken from a return prepared for the Government of Brazil, by Mr. J. P. Favilla Nunes, and published in Rio de Janeiro, 1889.

proportion of representatives they respectively have, the country least represented is shown to be the United States of America, and the next lowest is Brazil:—

Population, members, electors, and voters, Legislative Assembly. 29. The general election for the Legislative Assembly held on the 20th April, 1892, was the first after the passing of the Purification of Rolls Act 1891*; all the seats were contested except thirteen. Returns have been received from all the districts except one, and these show that 65 per cent. of the electors in contested districts voted. At the previous general election, which took place on the 28th March, 1889, the proportion of electors in contested districts who recorded their votes was $66\frac{1}{2}$ per cent. The following table shows for each electoral district the population, according to the recent census, number of members, total number of electors, and number and proportion of electors who recorded their votes at the general election referred to:—

Electors Assembly.

30. At elections for the Legislative Assembly, close upon twowho voted, thirds of the electors have generally recorded their votes in contested

^{*} No contest.

[†] In contested districts only.

districts; whereas in elections for the Legislative Council, the proportion has been rarely much above half, as has been already shown. The following are the proportions who voted at the last eleven general elections of members of the Lower House in districts in which the election has been contested:—'

PROPORTION OF VOTERS AT GENERAL ELECTIONS FOR THE LEGISLATIVE ASSEMBLY, 1866 TO 1892.

Year of General Election			Year of General Electi	ion.	Proportion of Electors of Contested Districts who voted. Per cent.		
1866			55.10	1880	(July)	• • •	65.85
1868	• •••		61.59	1883			64.96
1871 .			65.02	1886	•••		64.70
1874		• • •	61.00	1889		•••	66.58
1877	•		62.29	$1892\dots$			65.12
1880 (1	February))	66.56	·			

31. The estimated population of Victoria on the 31st December, Proportion 1891, was 1,157,678, and there being 48 members and 163,153 electors for the Upper House, there is one member to every 24,118 and one elector to every 7.1 of the population. In like manner, there being 95 members of the Legislative Assembly, and 278,812 electors for that House, there is now 1 member to every 12,186, and 1 elector to every 4.2 of the population.

and electors of both Houses to population.

- 32. The proportion of members to electors is one to every 3,399 for Proportion the Upper House, and 1 to every 2,935 for the Lower House. to electors.
- 33. The enumerated population of the United Kingdom, by the Proportion census of 1891, was 37,888,153, and the Upper House consisted of 551 peers. The proportion was therefore 1 peer to every 68,762 of the population. If Victoria were to be represented in the same proportion as far as the Upper House is concerned, that House would consist of no more than 17 members, instead of 48.

34. The United Kingdom returns 670 members to the Imperial Proportion Parliament, viz., 495 for England, 72 for Scotland, and 103 for The proportion of members to the population of the United Kingdom was 1 to every 56,545; or, for England, 1 member to every 58,887 persons; for Scotland, 1 member to every 56,015 persons; and for Ireland, 1 member to every 45,690 persons. If Victoria were to Representabe represented according to population in the same proportion as the United Kingdom, she would, instead of sending 95 members to the Lower House, return only about 20; if in the same proportion as

of members of Imperial Parliament to population.

Kingdom.

population in Victoria and United Kingdom.

England, she would return 19; if in the same proportion as Scotland, about 20; and if in the same proportion as Ireland, 25.*

Representation proposed for Federal Assembly. 35. In the Draft Bill adopted by the National Australasian Convention in 1891, for the construction of a Federal Constitution, the representation in the proposed Federal House of Assembly is based on a proportion of 1 member to every 30,000 inhabitants.

Municipal government.

36. Municipal or local government is almost universal throughout Victoria, all but about one per cent. of its whole area being divided into urban or rural municipalities. The former are called cities, towns, and boroughs, and the latter shires. They are regulated under the Local Government Act (54 Vict. No. 1112), as amended by Act 55 Vict. No. 1243, each municipality being a body corporate, with perpetual succession and a common seal, capable of suing and being sued, and of purchasing, holding, and alienating land. The cities, towns, and boroughs now number 60, and the shires 137. They have power to levy rates, and are also subsidized by the State. Their peculiar functions are to make, maintain, and control all streets, roads, bridges, ferries, culverts, watercourses, and jetties within their respective boundaries; also to regulate under proper by-laws the markets, pounds, abattoirs, baths, place of recreation, charitable institutions, and the arrangements for sewerage, lighting, water supply, prevention of fire, and carrying on of noxious trades.

Cities, Towns, and Boroughs.

37. A borough must not be of a greater area than nine square miles,† and, on being constituted, must have a population of inhabitant householders of not less than three hundred. No point within its limits must be more than six miles distant from any other point. Any borough having a gross revenue of not less than £10,000 may be declared by the Governor in Council a town, and any one having a gross revenue of not less than £20,000 may be declared by the Governor in Council a city.

Shires.

38. Portions of country containing rateable property capable of yielding, upon a rate not exceeding one shilling in the pound on the annual value thereof, a sum of £500, may be proclaimed as shires.

Subdivision of Districts.

39. The Governor in Council may divide any municipal district into any number of subdivisions not exceeding eight.

^{*} According to the census of 1891, the population of England and Wales was 29,148,888, of Scotland 4,033,103, of Ireland 4,706,162.

[†] Or 5,760 acres. Notwithstanding this proviso, four urban municipalities have larger areas, viz., Bendigo, with 7,900 acres; St. Arnaud, with 6,355 acres; Stawell, with 5,996 acres, and Port Fairy, with 5,902 acres.

- 40. Each municipality existing at the commencement of the Local Municipal Government Act is allowed the number of councillors then assigned to it; but in other cases the number must by the Statute be some multiple of three, and must not be less than 6 or more than 24. The number is usually nine. If the district is subdivided, the number of councillors is 3 for each subdivision. Male persons liable to be rated in respect of property of the rateable value of £20 at least in any municipal district are qualified to hold the office of councillor. Being a contractor or the holder of any office of profit under the council, being an uncertificated or undischarged bankrupt or insolvent, being convicted or attainted of felony, perjury, or any infamous crime, or being of unsound mind, renders a person incapable of being, or continuing to be, a councillor. The election of councillors takes place annually. A third part of the councillors retires each year by rotation, but retiring councillors may be re-elected.
- 41. The councillors elect their own chairman, who, in the case of Chairman of boroughs, is called the mayor; in the case of shires the president.

 The chairman becomes a justice of the peace, by virtue of his position during the time he holds office and one year longer.
- 42. Every person (male or female) 21 years of age or upwards, Municipal liable to be rated in respect of property within a municipal district, is entitled to be enrolled as a voter, provided the rates on such property have been fully paid.
- 43. Plurality of votes for the election of councillors is allowed Plurality of upon the following scale:—

In Boroughs.

Properties rat	ed at an a	annual value	of under £50		One vote
• 25	"	,,	£50 and under £10		Two votes
"	,,	,,	£100 and upwards	• • •	Three votes

IN SHIRES.

Properties ra	ated at an annu	ial value of	${f f}$ under £2 ${f f}$	• • •	One vote
"	,,	,,	£25 and under £75		
,,	>>	,,	£75 and upwards	• • •	Three votes

- 44. No person is allowed to vote for property of less than £10 Ten pounds annual value unless there is a house thereon, and he is the occupier rating insufficient thereof. In other cases, either the owner or occupier, but not both, without occupation. may vote.
- 45. Where any municipal district is subdivided, the ratepayers are Enrolment enrolled for the subdivision in which the property in respect of which divisions. they are enrolled is situated.

Rateable property.

46. All land situated in a municipal district, except Crown land and land used for public purposes, is rateable property.

General and separate rates.

47. Rates levied in municipal districts are of four kinds, viz., General rates are general, extra, separate, and improvement rates. made and levied uniformly over each district, and must not be more than 2s. 6d. or less than 6d. in the pound of the net annual value of the rateable property.* Extra rates are those which may be levied in any one or more subdivisions of a district in addition to the general rate, provided that both rates together in any subdivision do not exceed 2s. 6d. in the pound. Separate rates, limited to 6d. in the pound, may, by consent of one-third of the ratepayers in a particular portion of the district, be levied upon the property within such portion, for the execution of works intended for its special benefit. Improvement rates are, like separate rates, applicable to any particular portion of a district which requires special permanent improvements, such as the formation of private roads, rights-of-way, or sewers; on the security of such rates loans may be raised for the execution of the works, the rates being applied towards the repayment of the moneys borrowed with interest, and the maintenance of the works.

Incorporation of Melbourne and Geelong.

48. Melbourne and Geelong, the latter of which was for many years the place of second importance in the colony, having been incorporated under special statutes prior to the establishment of municipal government on a large scale throughout the colony, are not subject to the Local Government Acts except in a few comparatively unimportant particulars. Melbourne was incorporated as a town by Act 6 Vict. No. 7, which was assented to on the 12th August, 1842, and was afterwards ordained a city by Royal letters patent dated at Westminster on the 25th June, 1847, and gazetted in Sydney on the 5th February, 1848. Geelong was incorporated as a town on the 12th October, 1849, under Act 13 Vict. No. 40.

Melbourne and Metropolitan Board of Works. 49. An Act† to provide for the better management of the metropolis and for the creation of a Melbourne and Metropolitan Board of Works to give effect thereto was passed on the 20th December, 1890, and, as to the election of members, the date of holding the first meeting, and other preliminary matters, came into immediate operation, but the other provisions did not come into force

† Melbourne and Metropolitan Board of Works Act 1890 (54 Vict. No. 1197.)

^{*} Formerly it was provided that the annual value should be computed at not less than 5 per cent. of the capital value, but by the Local Government Act Amendment Act 1891, the minimum rate was reduced to 3 per cent.

until the 18th March, 1891 (the day of the first meeting of the Board). The Act is divided into seven parts, dealing respectively with the Board's constitution; Water Supply, Sewerage, and Drainage; Metropolitan General Fund and Rating; Borrowing Powers; Acquisition of Land; and Miscellaneous. The Board is a body corporate, consisting of a chairman elected by the Board, and of 39 other members elected by the Councils of the City of Melbourne and the twenty-three surrounding municipalities all within a radius of 10 miles from the General Post Office; but such members can only retain their seats on the Board so long as they continue to be members of their respective Municipal Councils. Seven members are allotted to the municipality of Melbourne, 4 to South Melbourne, 3 to Prahran, 2 each to four other municipalities, and one member each to the remaining seventeen. After the first annual election, each member will be elected for three years, whilst the terms of membership of the first elected members are so arranged that after the year 1894 one-third of the members for the whole district will retire annually. The chairman, whose salary may be fixed by the Board between the limits of £1,500 and £2,000 per annum, and has been fixed at the latter amount, will hold office for a period of four years, but is eligible for re-election. The whole of the Metropolitan Water Supply and Sewerage Works are vested in the Board—embracing all lands, reservoirs, tramways, mains, buildings, plant and machinery, etc., in connexion with the supply of water to the inhabitants of the metropolis, and all sewers and drains within the metropolis or works in connexion therewith; also all the bed soil and banks of the River Yarra, and all other public rivers, creeks, and watercourses within the metropolis, except so much thereof as is already vested in the Melbourne Harbor Trust and Railway Commissioners. The liability for that portion of the public debt which was incurred for the construction of Melbourne Waterworks—amounting to £2,389,934*—is transferred to the Board, which is held liable to the Treasurer of Victoria for the due payment of principal and interest. The revenue of the Board is to be derived chiefly from rates levied on all rateable property in the district, the annual rate not to exceed 1s. in the £ on the net annual value of such property, for the due collection and payment of which the various Municipal Councils are held responsible. The Board is empowered, in addition to loans raised by the Government, to borrow money by the issue of debentures so that the total

^{*} Including £250,000 stock authorized to be raised by the Government and to be handed over to the Board.

amount outstanding at any one time shall not exceed £5,000,000; it is also allowed a bank overdraft on current account not exceeding £100,000. All officers employed at the passing of the Act in the Melbourne Sewerage and Water Supply department have been placed under the control of the Board, and have become officers thereof, subject to the observance of all existing or accruing rights and privileges. An account of the Sewerage Works proposed to be carried out by the Board will be found in the last issue of this work. (Vol. II., page 309.)

Fire Brigades Boards.

50. The Fire Brigades Act 1890 (amended by the Fire Brigades Act 1891 in slight particulars) provides for the division of the populous parts of the colony into "Fire Districts" consisting of a "Metropolitan" and nine "Country Fire Districts." The "Metropolitan District" is controlled by a "Metropolitan Fire Brigades Board," and the country districts are subject to the management and control of a "Country Fire Brigades Board." The "Metropolitan Board" consists of nine members; 3 appointed by the Governor in Council; 1 by the Council of the City of Melbourne; 2 by suburban municipalities, and 3 by the Fire Insurance Companies carrying on business within the colony. The "Country Board" consists, also, of nine members; 3 appointed by the Governor in Council; 2 elected by the municipal councils of those municipal districts which are within or partly within any country fire district; 2 elected by the insurance companies carrying on business within such country fire districts; and 2 by the brigades in such districts. Local committees are appointed for each country district under the supervision of the Country Board. Each local committee consists of 3 members; 1 elected by the council or councils of municipalities in such fire district who is also chairman; I elected by the district fire brigades, or, if there be no brigade, by the Governor in Council, and 1 by the insurance companies insuring within the district. The tenure of office in all cases is limited to two years, but retiring members are eligible for re-election. Each Board has power to purchase, lease or otherwise acquire stations, buildings, engines, escapes, and other apparatus, and from time to time to sell, exchange, or let any property vested in it. for the purposes of the Act. The duty of taking and enforcing all necessary steps for the extinguishment of fires and protection of life and property from fire is vested in the respective Boards. Full power is given to each Board to form or disband fire brigades, to acquire plant, establish schools of instruction, provide for telephonic, telegraphic, or other communication between stations. An annual

report has to be furnished by each Board to the Minister. The amount required to cover the annual expenditure—which must not exceed the limits fixed from time to time by the Governor in Council—is to be contributed equally by the Treasurer of Victoria out of the consolidated revenue, by the municipalities whose districts are within or partly within the metropolitan, or any country district, out of the municipal funds, and by the insurance companies insuring against fire in such districts. Power is given to either Board to borrow money for the purposes of the Act in the form of debentures bearing interest at a rate not exceeding 6 per cent., but the total so borrowed by either Board at any one time must not exceed £100,000. Among the general powers and provisions are included—the establishment of salvage corps, the determining of awards, the permission to hold demonstrations, the supervision of hotels, theatres, etc., with reference to life saving apparatus, the regulation of height of buildings; the holding of inquests, etc.

51. An Act to constitute a Federal Council of Australasia* "for Federal the purpose of dealing with such matters of common Australasian Act. interest, in respect to which united action is desirable, as can be dealt with without unduly interfering with the management of the internal affairs of the several colonies by their respective legislatures," passed the Imperial Parliament and became law on the 14th August, 1885. This Act provides for the institution of a Council composed of representatives of such of the Australasian colonies as should pass an Act or Ordinance declaring that the Imperial Act should have force therein; each such colony to be represented by two members, except in the case of Crown colonies, which should be represented by only one member each, power being reserved to Her Majesty, at the request of the legislatures of the colonies, from time to time to increase the

52. Saving Her Majesty's prerogative, and subject to the pro-Matters visions of the Act, the Council was authorized thereby to have Federal legislative authority in respect to the following matters:—

Council may legislate.

- (a) The relations of Australasia with the islands of the Pacific.
- (b) Prevention of the influx of criminals.

number of representatives for each colony.

- (c) Fisheries in Australasian waters beyond territorial limits.
- The service of civil process in the courts of any colony within Her Majesty's possessions in Australasia out of the jurisdiction of the colony in which it is issued.
- The enforcement of judgments of courts of law of any colony beyond the limits of the colony.

^{*} Federal Council of Australasia Act 1885 (48 & 49 Vict. cap. 60).

(f) The enforcement of criminal process beyond the limits of the colony in which it is issued, and the extradition of offenders, including deserters of wives and children, and deserters from the imperial or colonial naval or military forces.

(g) The custody of offenders on board ships belonging to Her Majesty's

Colonial Government beyond territorial limits.

(h) Any matter which at the request of the legislatures of the colonies Her Majesty by Order in Council shall think fit to refer to the Council.

(i) Such of the following matters as may be referred to the. Council by the legislatures of any two or more colonies, that is to say-general defences, quarantine, patents of invention and discovery, copyright, bills of exchange and promissory notes, uniformity of weights and measures, recognition in other colonies of any marriage or divorce duly solemnized or decreed in any colony, naturalization of aliens, status of corporations and joint stock companies in other colonies than that in which they have been constituted, and any other matter of general Australasian interest with respect to which the legislatures of the several colonies can legislate within their own limits, and as to which it is deemed desirable that there should be a law of general application. Provided that in such cases the Acts of the Council shall extend only to the colonies by whose legislatures the matter shall have been so referred to it, and such other colonies as may afterwards adopt the same.

Assent to Council.

53. It was expressly provided that bills relating to the first items Bills passed by Federal in the list—(a), (b), and (c)—should be reserved for the signification of Her Majesty's pleasure; other bills might be assented to by the Governor of the colony in which the Federal Council was held, subject, however, to the subsequent disallowance by Her Majesty, within one year, if Her Majesty should so determine.

Further Council Act.

54. The Governors of any two or more of the colonies were also of Federal given power upon an address of their legislatures to refer for the consideration and determination of the Council any questions relating to those colonies, or their relations with one another; the Council thereupon to have authority to consider and determine the matters so referred to it. The Council was also given power to make representations or recommendations to Her Majesty with respect to any matters of general Australasian interest, or to the relations of Her Majesty's possessions in Australasia with the possessions of foreign powers.

Expenses of Federal Council.

55. It was further provided that the necessary expenditure connected with the business of the Council should be defrayed in the first instance by the colony wherein the expenditure was incurred, and should be ultimately contributed and paid by the several colonies in proportion to their respective populations; in case of difference, the Governor of Tasmania being empowered to assess and apportion the amounts payable.

Power to determine operation of Act in

56. The Act was to cease to be in operation in respect to any colony, the Legislature of which should have passed an Act or any colony. Ordinance declaring that the same should cease to be in force therein;

but all Acts of the Council passed while the Act was in operation in any such colony were to continue to be in force unless altered or repealed by the Federal Council.

57. An Act (49 Vict. No. 843) to bring this Act into operation Colonies was passed into law in Victoria on the 9th December, 1885, and similar at Federal Acts or Ordinances were passed in Queensland, Western Australia, Tasmania, Fiji, and subsequently in South Australia. The operation of the South Australian Act, however, was limited to two years; that period having expired, and the Act not having been renewed, South Australia is not at present in the Federation. The other two Australasian colonies, viz., New South Wales and New Zealand, have not joined the Federal Council.

58. The Federal Council has held four sessions since its inaugu- Dates and ration. The first session was opened on the 25th January, 1886; the second on the 16th January, 1888; the third on the 29th January, 1889; and the fourth on the 20th January, 1891. All the sessions were held in Hobart, and were opened by the Governor of that colony. At the last session, Victoria was represented by the Premier and the Attorney-General; Queensland by the Premier and a member of the Legislative Assembly; and Tasmania by the Attorney-General and The present representatives of Victoria are the the Treasurer. Hon. Wm. Shiels, Attorney General (Premier); and the Hon. Allan McLean, Chief Secretary. The sittings in 1891 were not attended by delegates from the other colonies represented in Council.*

59. The Council at each session appoints a standing committee to standing act while the Council is not sitting. The chairman of the present Committee. standing committee is the Hon. William Shiels, the senior representative of Victoria.

60. Towards the end of 1889, at the instance of the Hon. Sir Austral-Henry Parkes, G.C.M.G., Premier of New South Wales, negotiations Federation were opened between the various Australasian colonies, with the view 1890 of bringing about a Federal Union of the whole in "one powerful Australian nation," the result being that a conference of representatives of the various colonies interested was held in Melbourne in the early part of 1890, when resolutions were adopted affirming the desirability of Federation, and binding the members of the conference to induce the legislatures of their respective colonies to appoint

^{*} For particulars as to the names and official positions of representatives of the different colonies, who took part in the proceedings of the first three sessions of the Federal Council, see *Victorian Year-Book*, 1889-90, Vol. I., paragraph 77.

delegates to a National Australasian Convention, empowered to consider and report upon an adequate scheme for a Federal Constitution.

National Australasian Convention. 61. In accordance with these resolutions, delegates to a National Australasian Convention were duly appointed, and the Convention commenced its deliberations in Sydney on the 2nd March, 1891, and closed on the 9th April, 1891. After an animated debate extending over more than a fortnight, the following resolutions were adopted:—

RESOLUTIONS OF THE NATIONAL AUSTRALASIAN CONVENTION, 1891.

That in order to establish and secure an enduring foundation for the structure of a Federal Government, the principles embodied in the Resolutions following be agreed to:—

- (1.) That the powers and privileges and territorial rights of the several existing Colonies shall remain intact, except in respect to such surrenders as may be agreed upon as necessary and incidental to the power and authority of the National Federal Government.
- (2.) No new State shall be formed by separation from another State, nor shall any State be formed by the junction of two or more States or parts of States, without the consent of the Legislatures of the States concerned, as well as of the Federal Parliament.

(3.) That the trade and intercourse between the Federated Colonies, whether by means of land carriage or coastal navigation, shall be absolutely free.

(4.) That the power and authority to impose Customs duties and duties of Excise upon goods the subject of Customs duties and to offer bounties shall be exclusively lodged in the Federal Government and Parliament, subject to such disposal of the revenues thence derived as shall be agreed upon.

(5.) That the Military and Naval Defence of Australia shall be entrusted to Federal Forces, under one command.

(6.) That provision should be made in the Federal Constitution which will enable each State to make such amendments in its Constitution as may be necessary for the purposes of the Federation.

Subject to these and other necessary conditions, this Convention approves of the framing of a Federal Constitution which shall establish—

- (1.) A Parliament, to consist of a Senate and a House of Representatives, the former consisting of an equal number of members from each Colony, to be elected by a system which shall provide for the periodical retirement of one-third of the members, so securing to the body itself a perpetual existence combined with definite responsibility to the electors, the latter to be elected by districts formed on a population basis, and to possess the sole power of originating all Bills appropriating revenue or imposing taxation.
- (2.) A Judiciary, consisting of a Federal Supreme Court, which shall constitute a High Court of Appeal for Australia.
- (3.) An Executive, consisting of a Governor-General, and such persons as may from time to time be appointed as his advisers.

Committees appointed by Conven-appointed three committees to deliberate and draw up reports on tion.

Committees to deliberate and draw up reports on certain matters submitted to them before dealing with the subject of

the Federal Constitution to be decided on. The first committee was to deal with provisions relating to Finance, Taxation, and Trade regulation; the second, with the establishment of a Federal Judiciary -its powers and functions; and the third with the consideration of Constitutional machinery, and the distribution of functions and powers, and to prepare and submit to the Convention a Bill, based upon the deliberations of the other two committees, for the establishment of a Federal Constitution.

63. The Bill—intituled a Bill "To Constitute a Commonwealth Draft Bill of Australia"—having been drafted as directed, was, with the reports by Convention. of the other two committees, duly presented to the Convention, and subsequently adopted with slight alterations. Finally, the Convention formally recommended that provision be made by the Parliaments of the several colonies for submitting for the approval of the people of the colonies respectively the Constitution as framed by the Convention.

64. Subjoined is a list of the Governors and Acting Governors of Governors. Victoria, with the dates of their assumption of and retirement from office:

GOVERNORS OF VICTORIA.

Name.	Date of Assumption of Office.	Date of Retirement from Office.
Charles Joseph La Trobe { John Vesey Fitzgerald Foster (acting) Sir Charles Hotham, K.C.B Major-General Edward Macarthur	30th Sept., 1839* 15th July, 1851 8th May, 1854 22nd June, 1854 1st January, 1856	5th May, 1854 22nd June, 1854 31st December, 1855† 26th December, 1856
(acting) Sir Henry Barkly, K.C.B Sir Charles Henry Darling, K.C.B Brigadier-General George Jackson	26th December, 1856 11th September, 1863 7th May, 1866	10th September, 1863 7th May, 1866 15th August, 1866
Carey, C.B. (acting) The Honorable Sir John Henry Thomas Manners-Sutton, K.C.B.‡	15th A ugust, 1866	2nd March, 1873
Sir William Foster Stawell, Kt.(acting) Sir George Ferguson Bowen, G.C.M.G.§	3rd March, 1873 31st March, 1873	19th March, 1873 22nd February, 1879

^{*} At the first of these dates Mr. La Trobe assumed the office of Superintendent of Port Phillip; at the second he became Lieutenant-Governor of Victoria.

[†] Sir Charles Hotham died at this date.

[‡] Succeeded to the title of Viscount Canterbury, December, 1869.

[§] Sir G. F. Bowen was absent on leave from the 31st December, 1874, to the 14th January, 1876.

GOVERNORS OF VICTORIA—continued.

Name.	Date of Assumption of Office.	Date of Retirement from Office.
Sir Redmond Barry, Kt. (acting) Sir William Foster Stawell, Kt.	3rd January, 1875 11th January, 1875	10th January, 1875 14th January, 1876
(acting) The Most Honorable George Augustus Constantine Phipps, Marquis • of	27th February, 1879	18th April, 1884
Normanby, G.C.M.G., P.C. Sir William Foster Stawell, Kt. (acting)	18th April, 1884	15th July, 1884
Sir Henry Brougham Loch, G.C.M.G., K.C.B.	15th July, 1884	15th Nov., 1889*
Sir William Foster Stawell, K.C.M.G. (Lieutenant-Governor)	6th November, 1886†	12th March, 1889
Sir William Cleaver Francis Robinson, G.C.M.G. (acting) The Right Honorable John Adrian	(9th March, 1889 (16th Nov., 1889 28th November, 1889	17th October, 1889 27th November, 1889 Still in office
Louis Hope, Earl of Hopetoun, G.C.M.G.	20th 110 tollisor, 1000	

Note.—Captain William Lonsdale, formerly of the 4th Regiment, was appointed Police Magistrate of the District of Port Phillip on the 9th September, 1836, and assumed office on the 29th of the same month. In that capacity he was in charge of the District until the assumption of office as Superintendent by Mr C. J. La Trobe. Subsequently, Captain Lonsdale acted as Superintendent during the temporary absence of Mr. La Trobe, who was called on to administer the Government of Tasmania from the 13th October, 1846, to the 25th January, 1847.

Duration of Governorship.

65. Since Victoria has been an independent colony, the average time during which the Governors of Victoria, prior to Lord Hopetoun, not including the Acting Governors, have held office has been about four years and seven months.

Interregna in Victoria.

66. During the twelve days between the 19th and the 31st March, 1873, the former being the day on which Sir W. F. Stawell left the colony, and the latter that on which Sir G. F. Bowen arrived; also during the five days between the 22nd and 27th February, 1879, the former being the day on which Sir G. F. Bowen left, and the latter that on which Lord Normanby arrived, there was neither Governor nor Acting Governor in Victoria.

Ministries.

67. Since the inauguration of responsible government, twenty-five Ministries have held office in Victoria. The following are the names of the members of these Ministries, and the dates of their assumption of and retirement from office:—

^{*} Sir H. B. Loch was absent on leave from the 9th March to the 17th October, 1889.

[†] Date of appointment. Sir W. F. Stawell never acted after his appointment as Lieutenant-Governor. He died on the date given in the next column. No Lieutenant-Governor has been appointed since.

MINISTRIES.

William Anderson	Commissioner of Public Works	2 Sept. 1890	5 Nov. 1890

^{*} Died at this date.

† John Lamont Dow resigned 21st May, 1890, and was re-appointed 1st Sept., 1890. His duties were temporarily

administered by Dr. Pearson.

[†] The duties appertaining to the office of Minister of Mines were attended to by the Hon. John James from the 20th February to the 6th April, 1886. Mr. James, however, was not appointed Minister of Mines, and official documents requiring the Minister's signature were signed by Mr. Dow. Mr. James failed to obtain a seat in Parliament, and resigned the Acting Office on the 6th April, 1886.

§ Mr. M H. Davies resigned his Ministerial office on being elected Speaker of the Legislative Assembly.

Appointed Commissioner of Public Works on this date. ¶ Appointed Minister of Mines on this date.

*** The Representatives of the Government in the Upper House are indicated by the letters "M.L.C."

13. Charles Gavan Duffy	357	25. William Shiels	Still in office.

^{*}The term "Premier" is used to show that the Ministers named were respectively at the head of the Governments enumerated; there is, however, no such office as that of Premier recognised under the Victorian Constitution. Nevertheless, the Hon. Graham Berry was appointed Premier on the 7th August, 1875, but vacated the office three days later. No other Minister has ever been appointed under that title.

† For the date of assumption of, and retirement from, office by each Ministry, see last table.

Average

69. By means of the figures in the last column it is ascertained duration of Ministries. that the average duration of Victorian Ministries prior to the Ministry now in office has been 550 days, or 1 year and 6 months.

Parliaments.

70. The present is the fifteenth Parliament since the inauguration of responsible government in Victoria. The following table shows the number of sessions in each Parliament, the dates of opening and of closing or dissolution, also the duration of each session and of each Parliament:-

Proportion
of persons
employed
by the
State to
population
in three
colonies.

73. By the following statement, based upon the foregoing table, it appears that, in proportion to population, the number of persons employed in the departments named, and the average payment to such persons, is smaller in Victoria than in either New South Wales or Queensland, whilst the average salary for persons employed, though lower in Victoria than in New South Wales, is not so low as in Queensland:—

Proportio	N OF	PERSO	vs E	MPLOYED	\mathbf{TO}	POPUL	ATI	on.

Upper
House in
Australasian
colonies-Members
and
electors.

77. The Constitution of Western Australia having been proclaimed on the 22nd October, 1890, all the Australasian colonies now possess responsible Government, and an Upper and a Lower House of Parliament.† In three of these colonies the members of the Upper House are elected, and in the other four they are nominated by the Governor. In Western Australia, however, this House is to become elective on the expiration of six years after the first summoning of Parliament, or when the population of the colony attains 60,000. The following is a statement of the number of members of that House, and the manner and term of their appointment in each colony, also the number of electors in the three colonies in which the appointment is by election:—

UPPER HOUSE IN AUSTRALASIAN COLONIES.—MEMBERS AND ELECTORS.

Colony.	Number of Members.	Manner of Appointment.	Term of Appointment.	Number of Electors.
Victoria New South Wales Queensland South Australia Western Australia	24 15	Elected Nominated Nominated Elected Nominated	Six Years‡ Life§ Life Eight years‡ Six years	163,153 33,668
Tasmania New Zealand	. 18 39¶	Elected Nominated	Six years { Life** { Seven years	6,750

^{*} Including 444 teachers of unclassified schools.

convicted of certain crimes, his seat thereby becomes vacant.

† One-third of the members retire by rotation every two years in Victoria (with a few exceptions), and every three years in South Australia.

|| Four-fifths of the persons nominated must not be holders of any office of emolument under the Crown, except officers of Her Majesty's Sea and Land Forces on full or half-pay, or retired officers on pension.

[†] For a full account of the constitution of each colony, except Western Australia, see Victorian Year-Book, 1883-4, Appendix C, and same work, 1884-5, Appendix E.

[§] A member may resign, and he vacates his office by being absent for two successive sessions without leave; by becoming a citizen of a foreign state; by becoming bankrupt or insolvent; by becoming a public contractor or defaulter; or by being attainted of treason, or convicted of felony or any infamous crime.

[¶] Including two Maori members (viz., aboriginal natives).

** Term reduced, for future appointments, from life to seven years, by an Act passed in 1891. If a member of this House is absent without leave for two successive sessions, or makes an acknowledgment of obedience or allegiance to any foreign state, or becomes bankrupt or insolvent, or is

78. The following is a statement of the qualification of members Upper of the Upper House in the various colonies. Victoria appears to be Qualificathe only colony of the group in which a property qualification is necessary:-

UPPER HOUSE IN AUSTRALASIAN COLONIES.—QUALIFICATION OF MEMBERS.*

Victoria	•••	At least 30 years of age; a natural born or naturalized subject of Her Majesty; possessed of freehold property in Victoria of the value of £100 per annum.
New South Wales	• • •	At least 21 years of age; a natural born or naturalized subject of Her Majesty.
Queensland	• • •	At least 21 years of age; a natural born or naturalized subject of Her Majesty.
South Australia	•••	At least 30 years of age; resident 3 years in the colony; a natural born or naturalized subject; or legal denizen.
Western Australia	•••	No specific qualification at present.
Tasmania	•••	At least 30 years of age; a natural born or naturalized subject of Her Majesty; or a holder of letters of denization or certificate of naturalization.
New Zealand	• • •	At least 21 years of age; a natural born or naturalized subject of Her Majesty.

79. A property qualification for electors of members of the Upper Upper House exists in the three colonies in which the appointment is by The following is a description of the necessary qualifications:—

UPPER HOUSE IN AUSTRALASIAN COLONIES.—QUALIFICATION OF ELECTORS.

Victoria	•••		At least 21 years of age; possessed of freehold property rated in some municipal district at not less than £10 per annum, or occupying leasehold property of not less than a £25 annual rating; or being a graduate of some university in the British dominions, a barrister, a solicitor, a legally qualified medical practitioner, an officiating minister of religion, a certificated schoolmaster, a matriculated student of the Melbourne University, or an officer of the Army or Navy not on active service.
----------	-----	--	---

^{*} In most, if not all the colonies, judges of any court in the colony; ministers of religion; persons holding offices of profit or emolument under the Crown (except Responsible Ministers); and contractors on account of the Public Service are not eligible as members. Persons attainted of treason, or convicted of felony or infamous offence, and uncertificated insolvents are disqualified from being elected, or continuing to be, members of this House.

[†] When the Upper House in Western Australia becomes elective, a property qualification will be required for members of freehold estate of the value of £500 above all incumbrances, or of the clear yearly value of £50; whilst for electors, it will be £200 for freeholders, or £30 for lease or householders.

¹ See last footnote.

UPPER HOUSE IN AUSTRALASIAN COLONIES.—QUALIFICATION OF Electors—continued.

South Australia

At least 21 years of age; natural born or naturalized subject or legal denizen; possessed of a freehold estate of the value of £50, or a leasehold of £20 annual value, with three years to run, or with right of purchase; or occupying a dwelling-house of £25 annual value, six months on roll prior to election.

Tasmania ...

At least 21 years of age, and a natural born or naturalized subject of Her Majesty; possessed of a freehold estate of the value of £20 per annum, or a leasehold of £80 per annum; or being a graduate of some university in the British dominions, an associate of arts of Tasmania, a barrister, a solicitor, a legally qualified medical practitioner, an officiating minister of religion, an officer or a retired officer of H. M. Army or Navy not on actual service, or a retired officer of the Tasmanian Volunteer Force.

Upper House and money bills.

80. The Upper House cannot initiate money bills in any of the In New South Wales it claims the right to alter such bills, but this is not admitted by the Lower House. In South Australia, by a compact between the two Houses, the Upper House can return a money bill with a memorandum of the amendments they suggest. In Tasmania the Upper House has power to reduce, but not to increase the amounts proposed in such bills. In the other colonies, the Upper House cannot alter a money bill, but must either pass or reject it as a whole.

Upper Housemembers.

81. In South Australia, members of the Upper House receive Payment of £200 per annum for their services; in Tasmania they receive £100 per annum; and in New Zealand they receive £100 for every session attended if they live more than three miles from the seat of Parliament, in other cases no payment. In the remaining colonies members of this House receive no remuneration.

Upper House— Governor.

82. In South Australia, the Upper House can be dissolved by Dissolution the Governor, but only in the event of its rejecting the same Bill passed twice by the Lower House, a general election of the latter having intervened between the first and second passings and an absolute majority of the Lower House concurring in the second In the other colonies, the Governor has no power to dissolve the Upper House.

Lower House-Members and electors.

83. In all the Australasian colonies the members of the Lower House are elected. The following table shows the number of members, the term for which they are elected (unless sooner dissolved by the Governor), and the number of electors for this House in each colony:—

Lower House in Australasian Colonies.—Members and ELECTORS.

Colony.			Number of Members.	Term for which elected.	Number of Electors.
Victoria		. • •	95	Three years	278,812
New South Wales	• • •		141	Three years	305,546
Queensland		• •	72	Three years*	86,925
South Australia	• • •	• • •	54	Three years	69,331
Western Australia			30	Three years	5,810
Tasmania		.	36	Three years*	30,817
New Zealand	• • •		74+	Three years	183,171

84. No property qualification is necessary for members for the Lower Lower House in any of the colonies except Western Australia. The following is the necessary qualification:—

members.

Lower House in Australasian Colonies—Qualification of MEMBERS.

Wiekenie	-	At least 91 wears of any and marident in Wistonia Co. 41
Victoria	•••	At least 21 years of age, and resident in Victoria for the space of two years.‡
New South Wales	• • •	At least 21 years of age, absolutely free, and a natural born or naturalized subject of Her Majesty.§
Queensland	•••	At least 21 years of age, absolutely free, and qualified and registered as a voter in any electoral district.
* South Australia		Same qualification as an elector (post).
Western Australia		At least 21 years of age, a natural born or naturalized subject of Her Majesty, and seised at law, or in equity, of an estate of freehold of the value of £500, above all incumbrances, or of the yearly value of £50.
Tasmania	•••	At least 21 years of age, and a natural born or naturalized subject of Her Majesty.
New Zealand	•••	Same qualification as an elector (post).

^{*} On dissolution of present Parliament. The term was formerly five years.

[†] Four of these are Maoris.

[#] Members of the Legislative Council, judges of any court in Victoria, ministers of religion, persons attainted of treason, or convicted of felony or nefarious crime, and uncertificated insolvents are disqualified from sitting or voting in this House.

[§] No person can be a member of this House who is a member of the Upper House, who holds any office of profit under the Crown, during pleasure or for a term of years, or who is interested in any contract for or on account of the Public Service.

^{||} Members of the Upper House, ministers of religion, holders of an office of profit under the Crown (except Responsible Ministers and two other officers to be named by the Governor in Council), Crown pensioners (except officers in the Army or Navy) are incapable of being elected for this House.

[¶] Judges of the Supreme Court, persons holding offices of profit or emolument under the Crown (except Responsible Ministers), and contractors on account of the Public Service are not eligible as members.

Lower House— Qualification of electors. 85. To entitle a person to be an elector for members of the Lower House of Parliament, a property qualification is not essential in any of the Australasian colonies except Western Australia and Tasmania. A further vote in each electoral district in which real property is held is, however, in most instances,* acquired in respect to such property, but no person is allowed two votes in the same electoral district. The following is a statement of the qualification of electors for this House in each of the colonies:—

Lower House in Australasian Colonies—Qualification of Electors.

Victoria		Any person at least 21 years of age, a natural born or naturalized subject of Her Majesty, not subject to any legal incapacity, and having resided in Victoria for the space of one year, may vote by virtue of being included in the lists of ratepaying electors, or by virtue of being the holder of an "elector's right," but no person may vote twice in the same electoral district at one election.
New South Wales	•••	Any person at least 21 years of age, a natural born or naturalized subject of Her Majesty, is after six months residence entitled to be placed on the roll of electors either in respect to residence or property.
Queensland	• • •	Any person at least 21 years of age, absolutely free, a natural born or naturalized subject of Her Majesty, and being a resident in any electoral district for a period of six months, is entitled to be placed on the roll of electors either in respect to residence or property.
South Australia		Any person at least 21 years of age, a natural born or naturalized subject of Her Majesty, untainted by crime, and having been on the electoral roll of his district for six months prior to the election is entitled to vote.
Western Australia		Any person of full age, and not subject to any legal incapacity, a natural born or naturalized subject of Her Majesty, or a denizen of Western Australia, who has for a year previous to registration possessed, within the electoral district for which he desires to vote, freehold of the value of £100, above all incumbrances, or leasehold of the clear value of £10 per annum, or must have occupied within the electoral district for which he desires to vote a house or lodging rented at £10 per annum.
Tasmania	• • •	An elector must be at least 21 years of age, a natural born or naturalized subject of Her Majesty, and must be the owner or occupier of property of any value, as shown on the assessment roll, or must be in receipt of income, salary, or wages of not less than £60 per annum, of which £30 must be received during the six months prior to the claim to vote being sent in.

^{*}In South Australia there is no further vote in respect to property. It is believed that the privilege exists in all the other colonies.

Lower House in Australasian Colonies.—Qualification of Electors—continued.

New Zealand

For European representation:—Any male 21 years of age (not a Maori), if resident one year in the colony, and six months in an electoral district, is entitled to be placed on the register of voters. Freehold property, £25 in value, held for six months before registration entitles an adult male to register, if not already registered, under the residential qualification. For a Maori to be placed on the register it is necessary he should be possessed of a £25 freehold under Crown title, or be on a ratepayers' roll.

For Maori representation:—Every Maori may vote for the district in which he resides without registration.

Note.—In most, if not all the colonies, females are disqualified from voting, as also are lunatics, paupers, and criminals. In Victoria the police have been admitted to the franchise, but it is believed this privilege is not accorded to them in the other colonies.

86. In Victoria, New South Wales, and Queensland* each member Lower of the Lower House is entitled to receive £300 per annum in reim- Payment of bursement of expenses incurred in the discharge of his Parliamentary In South Australia each member receives £200 per annum for his services. In Tasmania and New Zealand each member receives £100 per session for his services; also in the latter colony, in consideration of necessary expenses incurred, £25 per session if he lives within three miles, or £50 if he lives beyond that distance from the seat of Parliament.

members.

87. In all the colonies the Lower House of Parliament can be Lower dissolved at the pleasure of the Governor. In such cases His Excellency acts generally according to the advice of Ministers, but Governor. there are instances in which their advice has been disregarded and a dissolution has been refused.

Dissolution

88. Females can neither be elected as members nor vote for the Females election of members of either House of Parliament in any of the elected, or Australasian colonies.

cannot be vote at elections.

89. In the following table a summary is given for each Austral-Members, asian colony, of the estimated population on the 31st December, 1891; the number of members and electors for the Lower House of Parliament about the same date; the proportion of inhabitants to a member, of inhabitants to an elector, and of electors to a member;

electors, etc., in Australasian colonies.

^{*} In Queensland, members also receive allowances for travelling expenses at the rate of 1s. 6d. per mile beyond the first three miles for one land journey from and to their own homes during each session; or the actual passage money paid if they travel by sea. The particulars for Western Australia are not available.

also the percentage of electors who voted at the last general election held in each colony:—

Ontario	2,000	7	

Note.—The salaries of the Governors of Newfoundland, British Honduras, Hong Kong, Straits Settlements and Labuan are paid in dollars; those of Ceylon, Mauritius, and Seychelles are paid in rupees; and the salary of the Governor of Gibraltar is paid in pesetas. These values have been reduced to pounds sterling upon the assumption that a dollar is worth 4s. 2d., a rupee 1s. 8d., and a peseta 9s. 6d.

92. The names of the reigning sovereigns or other rulers of the Reigning principal countries in the world, together with the years of birth and of succession to or assumption of office, are as follow:—

^{*} Including £3,000 as High Commissioner of South Africa, and £1,000 personal allowance from Imperial funds.

[†] Including allowances.

[‡] Including £1,000 as Governor of Zululand.

[§] Including £300 as High Commissioner of Western Pacific.

* Re-elected 1888.
† The King's mother, Maria Christina, born in 1858, who succeeded in 1885 on the death of her husband, Alphonso XII., acts as Regent during her son's minority.

Oldest and longest reigning sovereigns.

93. It will be observed that, omitting the Supreme Pontiff, the only European Sovereign older than the Queen of Great Britain and Ireland is Adolf of Schaumburg-Lippe, born in 1817; and Christian IX. of Denmark, Ernst II. of Saxe-Coburg-Gotha, and Karl Alexander of Saxe-Weimar, all born in 1818; also that Her Majesty has reigned longer than any other living monarch.

PART II.—POPULATION.

- 94. A census of Victoria was taken on the 5th April, 1891, that census of being the date on which the census was also taken in the United Kingdom, in the other Australasian colonies, and in most other portions of the British Empire.
- 95. The Victorian census was taken under a Statute (54 Vict. Census Act. No. 1171) specially passed to give legality to the undertaking. The Statute fixed the day on which the enumeration was made, gave the Governor in Council power to appoint the requisite officers, and made the Government Statist the officer responsible for carrying out the work.
- 96. According to the census, the total population of the colony Population, was as follows:—

Population, Census of 5th April, 1891.

Males Females	•••	•••	•••	•••	•••	598,414 541,991
	Total	•••			• • •	1,140,405

- 97. The increase of population between the censuses of 1881 and Increase of 1891 was 278,059, viz., 146,331 males and 131,728 females, as against an increase of 130,818, viz., 51,033 males and 79,785 females, between the censuses of 1871 and 1881, and an increase of 191,206, viz., 72,399 males and 118,807 females, between the censuses of 1861 and 1871. It will be observed that, whilst in the last intercensal period the increase of males was greater than that of females, in the two previous intercensal periods the increase of females was greater than that of males.
- 98. Between the censuses of 1881 and 1891, the rate of increase Rate of of the total population (32·2 per cent.) was much greater than that population between 1871 and 1881 (17·9 per cent.), but not so great as that between 1861 and 1871 (35·4 per cent.).
- 99. The rate of increase of the male population was considerably Rate of greater in the last than in either of the two previous intercensal males. periods, the percentage being 32.4 between 1881 and 1891, 12.7 between 1871 and 1881, and 22.0 between 1861 and 1871.

Rate of increase of females.

100. The rate of increase of the female population was—as in the case of the total population—greater in the last than in the middle period; but it was less than in the first period, the percentage being 32·1 between 1881 and 1891, 24·1 between 1871 and 1881, and 56·1 between 1861 and 1871.

Births over deaths in ten years.

101. According to the registrations, the excess of births over deaths between the censuses of 1881 and 1891 was 161,699, viz., 73,406 of males and 88,293 of females. Thus, the colony not only retained a number equivalent to the whole of this natural increase, but gained in addition 116,360 persons, viz., 72,925 males and 43,435 females, by immigration. In the previous intercensal period (1871 to 1881) the excess of registered births over registered deaths was, of males 66,923, and of females 78,980; but the colony lost by emigration a number of males equivalent to all those born and 15,890 more, and a number of females equivalent to all born except 805, the net loss in those ten years being thus 15,085.

Actual, apparent, and estimated

102. Between the censuses of 1881 and 1891 the excess of recorded arrivals by sea over recorded departures by sea was 183,347, viz., population. 126,817 of males, and 56,530 of females. If these numbers, and those just quoted showing the excess of births over deaths had been correct, and the arrivals and departures overland had balanced each other, the census would have shown a population of 1,207,392, viz., 652,306 males and 555,086 females, or 66,987, viz., 53,892 males and 13,095 females more than it actually did. The totals may to a certain extent have been affected by the overland emigration, of which no account is kept, but there is no doubt that the main disturbance has arisen from the circumstance that a large number of the departures by sea are unrecorded. The defective nature of the emigration returns being known, an allowance was made for it each quarter in the estimates of population published at those periods by the Government Statist, the whole allowance during the 10 years 1881-1891 being 52,131, viz., 41,333 males and 10,798 females; this reduction turned out to be insufficient, as the estimate brought on to the census day exceeded the population then enumerated by 14,856, viz., 12,559 males and 2,297 females. The following table shows the actual, apparent, and estimated population at the date of the census of 1891, and the numbers by which the apparent and estimated exceeded the actual population:—-

ACTUAL, APPARENT, AND ESTIMATED POPULATION, 5TH APRIL, 1891.

Sex.		Рорг	ılation of Vict	Excess over Actual Popula- tion of			
		Actual.*	Apparent.†	Estimated.;	Apparent Population.	Estimated Population.	
Males Females	•••		598,414 541,991	652,306 555,086	610,973 544,288	53,892 13,095	$12,\!559 \\ 2,\!297$
Total	•••	•••	1,140,405	1,207,392	1,155,261	66,987	14,856

103. During the period intervening between the last two censuses, Proportion the recorded departures from the colony numbered 602,189, viz., 411,792 of males and 190,397 of females. Adding the unrecorded departures as derived from the last column but one of the last table to these numbers, and calculating the proportion of such departures to the whole, it is found that 10 per cent. of those who left the colony in the ten years ended with the census day 1891, viz., $11\frac{3}{5}$ per cent. of the males, and $6\frac{2}{5}$ per cent. of the females—passed out by sea or over the borders without their departure being officially recognized. In the ten years 1871-81 these proportions were as follow:—Both sexes, 17 per cent.; males, 19 per cent.; females, 11 per cent.

emigrants.

104. It should be pointed out that the number by which the Disturbance apparent exceeds the actual population does not represent all who leave the colony unobserved, as whilst, practically, all the deaths are registered, a number of the births escape registration, the population estimates being thereby disturbed in an opposite direction to that due to unrecorded departures, therefore the number of the latter must really be greater than that shown by the figures.

by unregistered births.

105. At the census of 1881 the actual was found to be less than Actual and the apparent population by 67,437, or 55,204 males and 12,233 These numbers are greater as regards the total by 450, and as regards the males by 1,312, but less as regards the females by 862 than the difference found to exist at the recent census.

apparent population,

106. The want of agreement between the estimated and the enume-Reconrated population has necessarily caused a reconsideration of the figures which in the Victorian Year-Book and Statistical Register have been set down as showing the probable population of each year, and the

sideration of former estimates.

^{*} Enumerated at the census of 1891.

[†] Made up by adding excess of recorded births over recorded deaths, and of recorded arrivals over recorded departures, between censuses of 1881 and 1891.

[‡] Made up by deducting 41,333 males and 10,798 females from the apparent population for the estimated number of unrecorded departures.

difference involved in this want of agreement has been distributed as fairly as possible over the different years of the intercensal period. All calculations of averages or proportions to population during these years have also been reworked, and are now final.*

Chinese, 1881 and

107. The Chinese enumerated in 1891 numbered 9,377, including 888 half-castes, as against 12,128, including 169 half-castes in 1881. All were males except 605 at the first named, and 259 at the last named period. The numbers and sexes of the Chinese, whether of pure or mixed race, are shown for the two periods in the following table:—

. Chinese, 1881 and 1891.

				Males.		Females.		Total.	
	Race.		1881.	1891.	1881.	1891.	1881.	1891.	
Pure Mixed	•••	••	11,795 74	8,355 417	164 95	134 471	11,959 169	8,489 888	
T	ocal	•••	11,869	8,772	259	605	12,128	9,377	

Aborigines 1881 and 1891.

108. Only 565 Aborigines were enumerated in 1891 as against 780 in 1881. Half-castes are included on both occasions. These numbered 248, viz., 133 males and 115 females in 1891, but in 1881 their numbers were not separated from those of the pure blacks. The following table shows the numbers returned at both periods:—

Aborigines, 1881 and 1891.

Race.	Males.	Females.	Total.
Pure	192 133	125 115	317 248
Total Total 1881	325 460	240 320	565 780
Decrease	135	80	215

Central Board's Aborigines.

109. It may be remarked that it is tolerably certain there were estimate of more Aborigines in the colony both in 1881 and 1891 than are shown In consequence of the nomadic habits of this people, by the figures. some may have been missed by the sub-enumerators, and it is

^{*} The estimated population of Victoria at the end of each year will be found in the Statistical Summary of Victoria (first folding sheet) published at the beginning of the second volume.

moreover possible that the latter may have sometimes failed to comply with the instruction to note the fact of the person being an aboriginal by marking the letter "A" after the birthplace entry on the census schedule, and in consequence it might possibly not be recognised that he was one. The Central Board for the Protection of the Aborigines state that they have information of the existence of 731 Aborigines in the colony.

110. The following table contains a statement of the numbers of Population the people and of the dwellings and their distribution in the different counties at the last two censuses:-

and 1891.

Population and Dwellings, 1881 and 1891.

Total	87,884	90.57	12.950*	2.549	5.08*

113. The census of 1891 shows that the sexes in Victoria have Proportions slightly diverged from equality since the previous census, the population of females to every 100 males being 90.57, as against 90.75 in

^{*} In making these calculations the number of persons in ships and vessels have been excluded.

1881. In 1871 the proportion of females was 82.4, and, in 1861, 64.4 to every 100 males.

Density of population.

114. The population returned at the recent census furnishes a proportion of nearly 13 (12.98) persons to the square mile, or 1,298 persons to 100 square miles. The proportion in 1881 was 9.8 persons, in 1871 8.3 persons, and in 1861 6.1 persons to the square mile.

Density of houses.

115. In 1891 the inhabited dwellings were in the proportion of about $2\frac{1}{2}$ (2.55) to the square mile, or $25\frac{1}{2}$ to 10 square miles. The inhabited dwellings in 1881 were in the proportion of 19 in 1871, of 17, and in 1861 of 15, to 10 square miles.

Persons to a dwelling.

116. The number of persons to the inhabited dwelling differs but slightly from that which prevailed at the last census, the average being 5.08, or 508 persons to every 100 such dwellings in 1891, as against 506 to every 100 such dwellings in 1881. In 1871 the proportion was no more than 486, and in 1861 only 417 persons to every 100 inhabited buildings.

Population and dwellings in cities, towns, and boroughs. 117. The following table contains a statement of the population and dwellings enumerated in each city, town, and borough, on the 5th April, 1891:—

Population and Dwellings in each City, Town, and Borough, 1891.

Sexes in shires.

120. In shires males exceeded females by 54,000, the proportion being 81 of the latter to every 100 of the former. In only three of the shires were females the more numerous, viz., Boroondara, Caulfield, and Malvern.

Cities, towns, boroughs, townships, etc. 121. The population of 727 cities, towns, boroughs, townships, villages, and other centres of population has been ascertained from the census returns. The following table gives a list of such places, the position of each place, the pursuits with which it is connected, and the number of dwellings and inhabitants it was found to contain:—

CITIES, Towns, Boroughs, Townships, etc., 1891.

 $*_{*}*$ (c) signifies City, (t) Town, and (b) Borough.

^{*} Hotham in 1881.

[†] Emerald Hill in 1881.

[‡] Sandridge in 1881.

[§] Essendon and Flemington and Kensington were one borough in 1881.

Northcote and Preston were united in 1881 under the name of the Jika Shire.

[¶] Oakleigh Borough formed part of Oakleigh Shire in 1881.

123. Between the censuses of 1881 and 1891, whilst the population Increase in of Melbourne City increased by 7,502, or rather more than 11 per cent., the city with its suburbs increased by 207,949, or no less than 73 per cent. The greatest increase was in Prahran (18,535), then South Melbourne (16,350), Brunswick (15,739), Richmond (15,392), Hawthorn (13,566), Footscray (13,156), Essendon (11,578), and Collingwood (11,241). These were the only metropolitan municipalities in which the increase of population amounted to as much as 10,000.

palities.

124. The most populous of the suburban municipalities is South Most Melbourne, with 41,724 inhabitants; it and Prahran with 39,703, and Richmond with 38,797 inhabitants, are the only ones of which the population amounts to half that of Melbourne City.

populous suburban municipalities.

125. According to the census, the population of Greater Melbourne Increasing is equal to 43 per cent. of the population of the colony. This proportion increases rapidly, as will be observed by comparing the following figures, which show the proportions of the metropolitan to the whole population at the last four census periods:—

proportion of metropolitan population.

Proportion of Population of Greater Melbourne to the TOTAL POPULATION OF VICTORIA.

					Per cent.
1861	• • •		•••	•••	25.89

126. The district called Greater Melbourne, which, as has been Population stated, embraces the ground situated within a radius of ten miles from the Melbourne Post Office, extends over a wider area than that under the jurisdiction of the Metropolitan Board of Works. The following is a statement of the population and inhabited dwellings included in the area controlled by that body, including a portion of Moorabbin Shire (Sandringham), which has been added since the census was taken:-

and dwellings under Metropolitan Board of Works

127. Next to the municipalities embraced under the head of Population Greater Melbourne, the most important towns in Victoria are— Ballarat, comprising three municipalities; Bendigo, two; Geelong, tan towns. three; Warrnambool, one; Castlemaine, two; and Stawell, one. The enumerated populations of these, with their immediate suburbs, according to the results of the censuses of 1881 and 1891 respectively, also the increase or decrease in each during the decade, were as follow:—

Population of Six Extra-Metropolitan Towns, 1881 and 1891.

British and Foreign subjects. 131. The first grand division of the inhabitants of Victoria, according to their birthplaces, is into British and Foreign subjects. The table shows that in 1891, the former amounted to 97 per cent. and the latter to 3 per cent. of the total population; also that in the decennium between the last two censuses, while British subjects increased by nearly a third, Foreign subjects increased by less than a seventh.

Victorian born.

132. Persons of Victorian birth amounted in 1891 to nearly two-thirds of the population. These combined with natives of the other Australasian colonies amounted to seven-tenths of the population.

Decrease of certain nationalities. 133. In the interval between the censuses, the Irish, French, and Chinese embraced in the population diminished in numbers, but the natives of Australasia increased 47 per cent.

^{*} The minus sign (-) indicates decrease.

[†] Including dependencies either in Europe or elsewhere.

[‡] Including 17 of European race.

other colonies.

- 134. No nationality decreased between the censuses to the same Decrease of extent as the Chinese, the falling off being  $28\frac{1}{3}$  per cent. The diminution in the numbers of the Irish and French was but slight.
- 135. The attractiveness of Victoria to the natives of the other Increase of Australasian colonies is instanced by the fact that they increased 100 per cent., whilst the increase of the total population was only 32 per It is worthy of remark that the natives of each individual cent. colony of the group resident in Victoria increased in a faster ratio than the population of the latter, the proportionate increase of natives of New Zealand being 317 per cent.; South Australia, 155 per cent.; Queensland, 146 per cent.; New South Wales, 101 per cent.; Western Australia, 87 per cent.; and Tasmania, 38 per cent.

136. The next table shows the number of persons of each religious Religions of Where possible the exact way in which the religion was stated in the schedule has been entered, so that the manner in which the grouping has been effected may be readily understood:—

Religion						
Total specified	847,291	1,117,528	270,237	31.89	100.00	100.00
Unspecified	6,457	9,269	2,812	43.55		10000
Object to state Religion	8,598	13,608	5,010	58.27		
Total Population	862,346	1,140,405	278,059	32.24		• • •

138. If the whole of the Protestant sects be combined, the number Protestants of Protestants is found to have been 618,392 in 1881, and 836,857 in and Roman Catholics. The proportion of these to the population was 72.99 per cent. 1891. at the former, and 74.88 per cent. at the latter period. At the same two periods respectively the table shows the percentage of Roman Catholics in the population to have been 24.01 and 22.25; thus, during the intercensal period, whilst in proportion to population, Protestants gained 1.89 per cent., Roman Catholics sustained a loss of 1:76 per cent.

- 139. The table also shows that whilst, in proportion to the popu-Protestant lation, the Church of England, the Methodists, the Baptists, and the Lutherans showed more or less increase, the Presbyterians and the Independents lost slightly.
- 140. It will, moreover, be observed that the Salvation Army, a salvation Army. body which had no existence in Victoria in 1881, returned as many as 13,521 followers in 1891.

^{*} The minus sign (-) indicates decrease. † Including also Free Church of England and Protestants not otherwise defined.

¹ Including also Bible Christians. § Including also Catholics not otherwise defined.

Buddhists, Confucians, etc.

141. The only bodies which returned smaller numbers in 1891 than in 1881 were those classed as Buddhists, Confucians, etc., which fell off by 4,413. This reduction was mainly in consequence of the diminished numbers of the Chinese, which were fewer by 2,751 at the last than at the previous census period. It may be mentioned that of the Chinese (including half-castes) enumerated in 1891, 1,537 were set down as Christians, viz., 1,306 as Protestants and 231 as Roman Catholics.

No denomination and religion.

142. Persons returning themselves as of No Denomination and No Religion more than doubled between the last two censuses. In 1891, they amounted jointly to  $1\frac{1}{2}$  per cent. of the population.

Ages of the people.

143. The ages of 595,516 males and 539,920 females were recorded in the census schedules. In the following table the numbers under 22 and over 85 are shown at each year of age, the remainder are grouped in quinquennial periods:—

144. The total population halves itself at  $21\frac{1}{2}$  years of age, there Age at being about as many persons above as at and below that age. the same principle the male population halves itself at about 22½ years itself. of age, and the female population at about  $20\frac{1}{2}$  years of age.

Upon population

145. According to the census, the average age of the population Average was as follows:—In 1891, males, 26.61 years; females, 24.60 years; Males were, therefore, on the average, 2 both sexes, 25.66 years. years older than females. In 1881 the population was younger on the average than in 1891, males by 6 months, females by one year . and about  $3\frac{3}{4}$  months.

Ages, 1881 and 1891.

146. In the following table the numbers of males and females have been arranged in quinquennial periods of age, and are compared with the numbers at similar periods returned at the previous census:—

AGES OF THE PEOPLE, 1881 AND 1891.

Survivors and immigrants at various ages, 1881-1891.

147. In comparing the numbers in 1881 and 1891 embraced in each age group, the above table shows that there were 11,807 fewer males in the groups between 40 and 55 years of age at the latter period than at the former, but that in all the other groups of males and in all the groups of females the numbers were the larger at the latter period. It will, however, be readily understood that in order to show what falling off has taken place by emigration and deaths, or what increase has taken place by immigration, the numbers at each age period in 1891 should be compared with those belonging to the ten years younger group in 1881. Thus the males between 40 and 45 in 1891, although fewer by 1,910 than in 1881, were more numerous by 1,405 than those between 30 and 35 in 1881, and upon the same principle the deficiency of males between 45 and 50 is reduced from 6,242 to 1,322, and the apparent surplus of females between 40 and 45 is changed to a deficiency of 543. An examination of the table will show that in all the groups of males after 40 to 45, and in all the groups of females after 25 to 30, the numbers were smaller in 1891 than they were in the ten years younger groups in 1881.

^{*} The minus sign (-) indicates decrease.

148. It is evident that the census of 1881 can afford no guide as to Ages, births, the probable numbers in 1891 under ten years of age, as all returned 1881 and at that age at the latter period had been born since the census of 1881 had been taken. The number of births in the decennium intervening between the censuses must therefore be compared with the numbers under 10 in 1891 in order to ascertain whether there has been a gain or a loss. This is done in the following table, in which, also, the numbers at the other age periods in 1891 are compared with those returned as 10 years younger in 1881; the increase or decrease at each age, the deaths at each age, and the resulting gain by immigration or loss by emigration at each age being also shown:-

Ages, Births, and Deaths, 1881 to 1891.

Note.—In this table those whose ages were not specified in the Census Schedules have been distributed by proportion among the other numbers.

^{*} Births in the interval between the Censuses of 1881 and 1891.

Gain by arrivals or loss by departures.

149. The sum of the numbers in 1881, and of the births which took place between then and the census of 1891, expresses the whole number of persons to be accounted for, viz., 613,211 males and 563,670 females. As it is evident some will die, there must necessarily be a falling-off at each age, unless the numbers are supplemented by immigration. A glance at the fifth column will show that the age-periods at which the immigration was so great as to outnumber not only the deaths but also the emigration, were all between 10 and 45 (0 and 35 in 1881) in the males, and all between 10 and 30 (0 and 20 in 1881) in the females, the excess of the former being 39,403, and of the latter 17,233. The sixth column shows the deaths at each period in the ten years, the difference between which and the numbers in the fifth column where the minus sign occurs, or their sum where the plus sign occurs, gives the numbers in the last column, which express the actual gain by excess of arrivals over departures, or loss by excess of departures over arrivals at each period of age during the ten years.

Periods at which arrivals were in excess and vice versû.

150. It will be observed that the gain shown in the age-period 0 to 10 (not born in 1881) is more than the gain in the two subsequent periods combined in the case of the males, and nearly as much as that in those periods combined in the case of the females; but this can scarcely have been caused by so many more infants being brought here than have been taken away, and it is probable that unregistered births are partly accountable for the large numbers. A loss of 635 males will be observed at 55 to 60 (45 to 50 in 1881), of 432 females at 30 to 35 (20 to 25 in 1881), and of 340 females at 55 to 60 (45 to 50 in 1881), a gain being shown at all the other periods.

Net gain by immigration.

151. The difference between the sum of the plus quantities and the sum of the minus quantities in the last column shows a net gain by immigration of 72,925 males and 43,435 females, which numbers agree as a matter of course with those quoted in a previous paragraph*, as showing the extent to which the natural increase of the population has been added to by immigration in the case of both males and females.

Conjugal condition.

152. The conjugal condition of the people of Victoria at various periods of life, exclusive of Chinese and Aborigines, was returned as follows:—

#### Conjugal Condition of the People, 1891. (Exclusive of Chinese and Aborigines.)

			Ma	ales.		Females.

- 153. According to this table, there were, when the census was Married taken, 343,929 persons, or 30 per cent. of the population, exclusive of Chinese and Aborigines, in the marriage state, the wives exceeding the husbands by 3,363.
- 154. The single males of 20 and upwards and the single females Marriageof 15 and upwards, or in other words, the bachelors and spinsters in persons. the population,* numbered 144,567 and 140,240 respectively. these be added the widowers and widows at all ages, the whole marriageable population is ascertained to have amounted to 163,048 males and 173,138 females, the latter exceeding the former by 10,090.
- 155. The marriageable females were in the proportion of 106 to Proportion every 100 marriageable males. In 1881 the proportion of marriageriageable males and able females was 120, but in 1871 only 74 to every 100 marriageable females. males.
- 156. It will be observed that before they had reached their 21st Married year 281 youths had become husbands, of whom 7 had lost their persons under 21 wives; and 3,471 girls had become wives, of whom 37 had lost their years of age. husbands; also that 1 boy and 3 girls under 15 years of age were living in the marriage state.
- 157. On the night of the census of 1891, 154,241 husbands abode Husbands in the same house with their wives; but there were 15,945 husbands whose wives were absent, and 19,304 wives whose husbands were absent. On the night of the previous census, the lone husbands numbered 11,841 and the lone wives 13,777.

together and apart.

^{*} Including 110 divorced males and 86 divorced females.

Divorced persons.

158. In 1891, 196 persons, viz., 110 males and 86 females were living in a state of divorce. In 1881 the number so living was only 19, viz., 9 males and 10 females.

Conjugal condition, 1881 and 1891. 159. In the next table are given the proportions at the last two censuses of single, married, and widowed males and females in every 10,000 of either sex at various periods of life:—

CONJUGAL CONDITION OF THE PEOPLE, 1881 AND 1891. (Exclusive of Chinese and Aborigines).

	In every 10,000 living at each Age.									
Ages.	t	Males.			Females.					
	Never Married.	Husbands.	Widowers.	Never Married.	Wives.	Widows

20 years and upwards	3,891	5,537	572	2,473	6,409	1,118				
All ages	6,891	2,818	291	6,398	3,072	530				
1891.										
Under 21 years	9,990	10		9,869	129	2				
21 years and upwards	4,131	5,294	575	2,666	6,147	1,187				
15 years and upwards	5,162	4,364	474	4,044	5,007	949				
20 years and upwards	4,338	5,107	555	2,914	5,949	1,137				
All ages	6,797	2,890	313	6,183	3,209	608				

Married persons, 1881 and 1891. 160. Considering the population at all ages, exclusive of Chinese and Aborigines, it is found that in 1881, 5,890 in every 20,000 of both sexes, or 2,818 in every 10,000 males and 3,072 in every 10,000 females, were living in the marriage state. In 1891 these numbers had risen to 6,099, viz., 2,890 in the case of males and 3,209 in the case of females.

Unmarried persons, 188! and 1891. 161. At all ages from infancy upwards, the single males decreased in proportion to the male population from 6,891 per 10,000 in 1881 to 6,797 per 10,000 in 1891, whilst the single females per 10,000 of the female population decreased from 6,398 to 6,183.

Widowed persons, 1881 and **1891**. 162. Both widowers and widows, the latter especially, showed larger numbers in proportion to the population in 1891 than in 1881.

163. In every 10,000 of their respective numbers in the population, Marriagethe unmarried males and widowers of 20 and upwards (marriageable sons, 1881 males), rose from 4,463 to 4,893; and the unmarried females and widows of 15 and upwards (marriageable females), increased from 4,868 to 4,993.

164. In 1881, only 1 male in 48,863, and 1 female in 40,968, were Divorced living in a state of divorce; but in 1891, 1 male in 5,357, and 1 female persons, and 1 female 1881 and in 6,291, were living in that condition.

165. The census returns of education give an account of the Education of numbers and ages of those persons who have acquired the rudimentary arts of reading and writing, but do not supply any particulars of the higher branches of knowledge which many such persons possess. The following table contains a statement of the numbers at various periods of life, omitting Chinese and Aborigines, who were returned as able to read and write, able to read but not write, or unable to read:—

EDUCATION OF THE PEOPLE, 1891. (Exclusive of Chinese and Aborigines.)

,, ,,			8,712	9,095	$9,\!491$	Could write.
,, ,,	• • .	• • • •	549	428	272	Could not read.

Improved state of education.

167. Comparing 1891 with 1871, very considerable improvement will be noticed at all the ages; also comparing it with 1881 there is substantial improvement, except at the school age (6 to 13) at which, although the proportion able to write was larger, the proportion able to read was rather smaller, and the proportion unable to read was rather larger than in 1881, which probably arises from the fact of the children between 6 and 13 being on the average younger at the latter period than at the former. At all the other ages named, and at all ages, a larger proportion could write and could read, and a smaller proportion could not read in 1891 than at either of the two former census periods.

Education of boys and girls.

168. It is invariably found that girls are somewhat superior to boys in point of elementary instruction. This, so far as 1891 is concerned, is shown by the following figures:—

IN EVERY 10,000 LIVING AT THE SCHOOL AGE (6 to 13), 1891.*

Boys.		Girls.	
9,357	• • •	9,421	Could read.
8,686	• • •	8,852	Could write.
643	• • •	<b>57</b> 9	Could not read.

Education of children sects.

169. The degree of education of children is found to differ of different according to the religious denomination. This will be seen by the following table, which shows the proportionate amount of primary

^{*} Exclusive of Chinese and Aborigines.

instruction returned as possessed by the children between 5 and 15 years of age belonging to each of the principal denominations:—

EDUCATION OF CHILDREN OF DIFFERENT DENOMINATIONS, 1891. (Exclusive of Chinese and Aborigines.)

Religious Denomination.	Numbers in every 10,000 living between 5 and 15 years of age—						
	Able to read and write.	Able to read only.	Unable to read				
Church of England*	8,190	637	1,173				
Presbyterians	8,302	663	1,035				
Methodists	8,461	581	958				
${\bf Independents} \hspace{1cm} \dots \\$	8,487	469	1,044				
Baptists	8,216	630	1,154				
Lutherans	7,820	518	1,662				
Salvation Army	7,878	782	1,340				
Other Protestants	8,145	692	1,163				
Total Protestants	8,270	627	1,103				
Roman Catholics†	8,161	687	1,152				
Jews	8,615	540	845				
Residue	7,753	725	1,522				
	8,236	641	1,123				

170. Of all the denominations named in the table, the children of Education of the Jews appear to be much the best educated. It must, however, be remembered that the adherents of this body are but few in number, and do not, as a rule, belong to the labouring classes. Especial interest attaches to the returns of the Roman Catholic denomination, as that body labours under the disadvantage of not generally availing itself of the gratuitous instruction offered by the State. The comparison of the degree of elementary education of children of that denomination with that of children of Protestants and Jews will be best understood by means of the following figures:—

CHILDREN BETWEEN FIVE AND FIFTEEN YEARS OF AGE, 1891.

Of Protestants			8,897 in	10,000	could read.
,,			8,270	"	could write.
,,	•••		1,103	,,	could not read.
Of Roman Catho	lics	• • •	8,848	,,	could read.
<b>)</b>	• • •	• • •	,	"	could write.
"			1,152	"	could not read.
Of Jews	• • •	• • •	9,155	• • • • • • • • • • • • • • • • • • •	could read.
<b>,,</b>	• • •	v v de es	8,615	95	could write.
,,,	• • • • • • •	• • • • • • • • • • • • • • • • • • •	845	<b>99</b>	could not read.

^{*} Including Protestants not otherwise described.

[†] Including Catholics not otherwise described.

Education of different sects compared.

171. It will be observed that, in proportion to their numbers, the Jews have more children who can read and write and fewer who are illiterate, than either of the other denominations; also, that the Protestant children are, in point of instruction, somewhat in advance of the children of the Roman Catholics.

Populations 1 of Australcolonies,

172. It has been already stated* that a census of all the Australasian colonies was taken on the same day, viz., the 5th April, 1891. 1881 to 1891. In the following table the numbers returned in the different colonies are collated with those returned at the previous simultaneous census, which was taken on the 3rd April, 1881:—

ENUMERATED POPULATIONS' OF AUSTRALASIAN COLONIES, 1881 AND 1891.

Colony.	Census Enumerated Population.				Females to	Persons to the	
	Year.	Males.	Females.	Total.	100 Males.	Square Mile.‡

Order of colonies in respect to population and sex.

173. Victoria is by far the most densely populated colony of the group; but in South Australia there exists a nearer approach to equality in the numbers of the sexes than in Victoria. The following is the order in which the colonies stand in respect of these two matters:—

whom 3,635 were Chinese.

^{*} See paragraph 94 ante.

[†] The figures for Victoria contain 780 Aborigines for 1881 and 569 for 1891; those for New South Wales contain 1,643 Aborigines for 1881 and 8,280 for 1891. In most other cases it is understood that the Aborigines are omitted. For estimated populations in each year since 1872, see Summary of Australasian Statistics (third folding sheet) in the second volume.

[†] For areas of the colonies, see paragraph 7 ante. § The population of South Australia, as here given, is inclusive of that contained in the Northern Territory, of which the small portion inhabited contained, when the census of 1881 was taken, 4,521 persons, of whom 3,804 were Chinese; and at the census of 1891, 5,219 persons, of

^{||} The population of New Zealand is exclusive of Maoris, who numbered 44,097, viz., 24,368 males and 19,729 females in 1881; and 41,993, viz., 22,861 males and 19,132 females in 1891.

#### ORDER OF COLONIES IN REFERENCE TO DENSITY OF POPULATION, 1891.

- 1. Victoria.
- 2. New Zealand.
- 3. Tasmania.
- 4. New South Wales.

- 5. Queensland.
- 6. South Australia.
- 7. Western Australia.

· Order of Colonies in reference to Equality of Sexes, 1891.

- 1. South Australia.
- 2. Victoria.
- 3. Tasmania.
- 4. New Zealand.

- 5. New South Wales.
- 6. Queensland.
- 7. Western Australia.
- 174. It will be noticed that, according to the census of 1891, the More perpopulation of Victoria is still greater than that of New South Wales. The male population of the latter exceeds that of Victoria; but the effect of this upon the numbers of the total population is neutralized by the large excess of females in this colony. The official estimates published prior to the recent census indicated that New South Wales had a larger population than Victoria, but the simultaneous enumeration of the two colonies has shown the reverse to be the case.

sons in Victoria **New South** Wales.

175. If reference be made to the last column but one of the table, Sexes it will be observed that in Victoria and Tasmania the proportion of males preponderates over that of females in a slightly higher, and in Western Australia in a much higher, degree now than it did in 1881; but in the other colonies the tendency since then has been for the sexes to approach nearer to equality.

diverging equality in some colonies.

176. The following table shows the population of the Australian Population continent without and with Tasmania and New Zealand, as returned at the censuses of 1881 and 1891, the proportions of the sexes and the number of persons to the square mile being also given:—

of Australia 1881 and 1891.

ENUMERATED POPULATION OF AUSTRALASIA, 1881 AND 1891.

Continent of—	Census	Enun	nerated Popula	tion.*	Females	Persons to the
	Year.	Males.	Females.	Total.	100 Males.	Square Mile.
Australia	{ 1881	1,155,149	981,763	2,136,912	84·99	·726
	{ 1891	1,631,363	1,405,207	3,036,570	86·14	1·031
Ditto with Tasmania	{ 1881	1,485,916	1,256,634	2,742,550	84·57	·892
and New Zealand	{ 1891	2,041,800	1,768,095	3,809,895	86·59	1·239

^{*} See footnote (†) on page 118 ante.

Sexes approaching equality.

177. According to the experience of the intercensal period, the proportionate excess of males over females shows a tendency to diminish both on the Australian continent and in Australasia as a whole.

Proportion of Victorians in Australasia. 178. A comparison of the figures in the last two tables will show that considerably more than one-third of the inhabitants of Australia, and about two-sevenths of the inhabitants of the Australasian group, are living in Victoria.

Population of Australasian colonies, 1861 to 1891.

179. In 1881 and 1891 the census was simultaneous in all the Australasian colonies, but not so in 1861 and 1871, except as regards Victoria, New South Wales, and South Australia. The populations of the other four colonies have, however, been brought by calculation from the nearest census to the same date as that on which the census of the three colonies named was taken, viz., to about the end of the first quarter of the census year, and the results are shown in the following table:—

CENSUS POPULATIONS OF AUSTRALASIAN COLONIES, 1861, 1871, 1881 AND 1891.*

Total Australasia	685,511	55.39	819,355	42.60	1,067,345	38.90				

181. From the figures in this table it may be found that, during Increase at the ten years intervening between the censuses of 1881 and 1891, the population of the Australasian colonies as a whole increased by 1,067,000, as compared with not quite 820,000 during the 10 years 1871 to 1881, and with less than 700,000 during the 10 years 1861 to In the last decennial period the increase in New South Wales was about 381,000, or nearly three-eighths of the whole; Victoria, 278,000, or over a fourth; Queensland, 180,000, or over a sixth; and New Zealand, 137,000, or over an eighth.

182. The following table shows the annual rate of increase of the Annual population of each colony in each of the last three decennial periods:-

increase, 1861 to 1891.

Annual Increase of Population, 1861 to 1891.

Colony.	:	Annual Rate of Increase between the Censuses of—				
	:	1861 and 1871.	1871 and 1881.	1881 and 1891.		
		Per cent.	Per cent.	Per cent.		
Victoria		3.07	1.66	2.83		
New South Wales		3.69	4:08	4.18		
Queensland		14.65	6.11	6.28		
South Australia		3.88	4.19	1.36		
Western Australia		5.28	1.63	5.30		
Total Australia	• • •	3.94	3.17	3.58		
Tasmania		1.14	1.37	2.40		
New Zealand	•••	11.80	6.63	2.49		
Total Australasia		4.51	3:61	3.34		

Rates of increase, 1881 to 1891.

183. Except in very small communities, an annual increase to the population of 3 per cent. may be regarded as a high rate, and even that could not under ordinary conditions be maintained except by the aid of immigration. For it rarely happens that over a series of years the rate of natural increase (i.e., by excess of births over deaths) exceeds 2 per cent. Indeed, in almost every country it is below  $1\frac{1}{2}$  per cent.; * although exceptional instances occur, as in the case of some of the Australasian colonies, where the rates have over a series of years considerably exceeded even 2 per cent.—notably New Zealand, where the rate has averaged during a recent decade as high as 2.4 per cent.* Such high rates, however, are unusual, and are generally due to the presence of an abnormally large proportion of the population being at the reproductive ages, consequent on a considerable influx of immigrants. A glance at the last table will show that in Queensland, Western Australia, and New South Wales the annual rate of increase in the ten years ended with 1891 has been considerably over 3 per cent., and although in the other colonies it has been less than 3 per cent., the average for the whole of Australasia has been over  $3\frac{1}{3}$  per cent., and for the continent of Australia nearly  $3\frac{2}{3}$  per cent.

Rates of increase at three periods compared.

184. On comparing the rates of increase at the three periods, it will be observed that the population of Victoria increased seventy per cent. faster at the last than at the second period, but not quite so fast as at the first period; also that the population of New South Wales increased much faster at the last than at the first, and a little faster than at the second period. Queensland and New Zealand had by far the highest rates of increase at the first and second periods; but, whilst Queensland still maintains a high position, New Zealand at the last period is shown to have had a lower rate than any colony except Tasmania or South Australia.

Probable
Austral
asian populations,
1901.

185. In view of the increases shown in the table, it may fairly be estimated that when the next simultaneous census of the colonies is taken, viz., in 1901, the inhabitants of the Australian continent will be found to number at least 4,310,000, and those of that continent with the addition of Tasmania and New Zealand will be found to number close upon 5,300,000.

Chinese in Australasian colonies.

186. It is estimated that in 1859 there were about 43,000 Chinese in the Australasian colonies, which number had become reduced in 1861 to 38,300, and in 1871 to 31,100. Ten years later, viz., at the

^{*} See Victorian Year-Book, 1889-90 Vol. I., page 323.

census of 1881, the Chinese had increased to 43,706, which number was 1,500 in excess of that returned in 1891. The following table shows, for each colony, the number of Chinese of either enumerated at the recent census, also the total number at the previous census, and the increase or decrease during the intercensal period:—

Chinese in Australasian Colonies, 1881 and 1891.

	-	Numbers, 189	NT1-	T (1)	
Colony.	Males.	Females.	Total.	Numbers, 1881.	Increase (+), Decrease(-).

187. In most, if not all, the Australasian colonies, the enumeration Aborigines of the Aborigines was incomplete. It has been already stated that, asian in Victoria, whilst only 565 (including half-castes) were enumerated, 731 are believed to be in existence. In Queensland no attempt was made to enumerate or estimate the number of Aborigines. Australia the Aborigines were not regularly enumerated, but estimates of their numbers were furnished by the census collectors; seveneighths of them were in the Northern Territory. In Western Australia only those Aborigines who were in the employment of the white population, together with a few who were met with travelling from one station to another, were enumerated. In Tasmania there are no longer any Aborigines, the last male having died in 1869 and the last It is believed that a very fair estimate has been female in 1876.

colonies.

^{*} In 1891, 888 half-castes, viz., 417 males and 471 females, and in 1881, 169 half-castes, are included.

[†] Including, in 1891, 867 half-castes, viz., 422 males and 445 females.

Including 29 male and 20 female children born in Queensland of Chinese parents; also 1 Chinaman born in New South Wales.

[§] It is understood that the figures for South Australia are not final.

^{||} See paragraph 109 ante.

made of the Maoris in New Zealand. The following are the numbers returned for each colony at the date of the census of 1891, also the numbers returned in 1881, with the increase or decrease:—

Aborigines in Australasian Colonies, 1881 and 1891.

Grand Total		56,490	44,967	101,457	75,797	+25,664¶

Note.—Tasmania is omitted, as no Aborigines remain on that island.

Apparent increase of in Australasia.

188. The figures show an increase during the intercensal period of Aborigines 27,800 Aborigines upon the Australian continent, which number, in consequence of there being a falling off of 2,100 in New Zealand, is reduced to 25,700 in the Australasian colonies as a whole. believed, however, that this increase is only apparent, and has arisen from the fact of the enumeration of the Aborigines having been less imperfect in 1891 than in 1881. Nothing like a complete census of the Aborigines was taken on either occasion.

Populations 1 of Australasian capitals, 1881 and 1891.

189. In the following table is shown the population of the capital city (including suburbs) of each of the Australasian colonies, according to the census returns of 1881 and 1891, the sexes at the latter period being distinguished; also the numerical and centesimal increase of population which took place in each city during the intercensal period:

^{*} Including in 1891 248 half-castes, viz., 133 males and 115 females.

[†] Including in 1891 3,183 half-castes, viz., 1,663 males and 1,520 females.

[!] No estimate having been made of the Aborigines in 1891, the figures for 1881 have been repeated. It is believed that these figures considerably understate the truth.

[§] Aborigines employed by whites and those met with in travelling between one station and another only. The figures for 1891 include 575 half-castes, viz., 293 males and 282 females.

Including in 1891 40 Aboriginal inhabitants of the Chatham Islands (Maoris) viz., 26 males and 14 females, but exclusive of 2,184 half-castes living amongst Europeans.

[¶] Net figures.

#### Populations of Australasian Capital Cities, 1881 and 1891.

190. According to the figures, both the numerical and centesimal Relative increase of the Melbourne population during the ten years ended with Melbourne April, 1891, have been greater than those of any of the other metropolitan cities.

population.

191. From the results of the census of 1891 it appears that the Proportions metropolitan population forms a larger proportion of the total population in Victoria than it does in any other of the Australasian colonies; at the census of 1881 that position was occupied by Adelaide, which has since fallen to the second place. The following are the proportions in each colony at the present time:—

total popu-

#### Proportion of Metropolitan to Total Population in Australasian Colonies, 1891.

Population, 1891.

193. The estimated population of Victoria at the end of 1891 was as follows:—

ESTIMATED POPULATION, 31ST DECEMBER, 1891.

Males Females			• • •		606,035 551,64 <b>3</b>
	Total	•••	•••	1,	157,678

Mode of forming population estimate.

194. This estimate shows an increase during the year of 24,412, viz., 9,971 males and 14,441 females. The figures have been derived from the numbers returned at the census, worked back to the beginning and on to the end of 1891 by means of the numbers expressing the excess of births over deaths and of arrivals over departures which took place before and after the census day. The official record of births, deaths, and arrivals have been taken as they stand, but the record of departures being known to be defective, an allowance has been made for those unrecorded, which are estimated to have amounted to 4,631, viz., 3,603 males, and 1,028 females in 1891. These numbers have accordingly been deducted from the totals. Had no such deductions been made, the apparent population at the end of 1891 would have been 1,162,309, viz., 609,638 males and 552,671 females.

Apparent increase of population in 1891.

195. According to the records of births and deaths, and of immigrants and emigrants, the apparent increase of population in 1891 was 29,150, viz., 14,436 males and 14,714 females. Of this increase, 19,874, consisting of 8,932 males and 10,942 females, resulted from excess of births over deaths; and 9,276, consisting of 5,504 males and 3,772 females, was due to excess of arrivals over departures.

Mean population, 1891.

196. The mean population of the year 1891 may be estimated as follows:—

#### ESTIMATED MEAN POPULATION, 1891.

Males	• • • • • • • • • • • • • • • • • • •	• • •	en de la companya de la companya de la companya de la companya de la companya de la companya de la companya de La companya de la co	• • •	600,860

197. In the following table the area of Victoria is divided into Urban and three districts, the first being the metropolitan (Greater Melbourne), population. extending in all directions for a distance of ten miles from the centre of the city;* the second, viz., the extra-metropolitan towns, including the total space embraced in cities, towns, and boroughs (present or former) outside the limits of Greater Melbourne; and the third, viz., the extra-urban or rural, including the remaining portions of the colony. In each of these districts the population is shown as at the end of 1891, as well as the average population during that year, also the ratio of the population of each district to that of the whole colony, and the number of persons to the square mile:—

#### URBAN AND RURAL POPULATION, 1891.

198. The number of gold miners to be shown by the census returns Mining is not yet known, as the tabulation of the occupations of the people has not been completed; an estimate of the number of miners actually at work is, however, each year made by the Mining Department, and the figures for the end of 1891 are subjoined:—

ESTIMATED NUMBER OF GOLD MINERS, 1891.

Alluvial miners Quartz miners	• • •	10,520 13,006	European miners Chinese miners		20,779 2,747
Total		23,526	Total	4	23,526
	era e e e e e e e e e e e e e e e e e e			5 g 11	

199. According to the same estimate, the Europeans engaged in European quartz mining at the end of 1891 exceeded those engaged in alluvial miners.

* Exclusive of water, which covers about 58 square miles of the area named.
† In addition to the present extra-metropolitan cities, towns, and boroughs, certain towns, which were at one time independent municipalities but have since become portions of shires, are included in this line. These, with their enumerated populations in 1891, are as follow:—Avoca, 787; Beechworth, 2,528; Chiltern, 1,351; Gisborne, 413; Graytown, 104; Guildford, 236; Jamieson, 223; Kilmore, 1,122; Kyneton, 3,371; Maldon, 1,692; South Barwon, 1,589; Steiglitz, 265; Taradale, 322; Walhalla, 1,771; Woodend, 1,157. The populations of the present cities, towns, and boroughs, also those of the shires, are given in a subsequent table.

mining by 4,919, the numbers being 12,849 and 7,930 respectively. The Chinese seldom practise quartz mining; the numbers returned as engaged in that industry being only 157, as against 2,590 engaged in alluvial mining.

Population of Australasian

200. The following table shows the estimated population of each Australasian colony at the end of 1891, the increase of population of end of 1891. each such colony since the census was taken, and the mean population of each during the year:—

Populations of Australasian Colonies at end of 1891.

Population 1 4 1 of Victoria and New South Wales.

201. It will be remembered that, according to estimates made in New South Wales, the population of that colony, as far back as 1887, was shown to be larger than that of Victoria. The census of 1891, however, revealed the fact that these estimates were erroneous, and Victoria had still the larger population.* If the figures in the table relating to New South Wales-which were supplied by the Government of that colony—are correct, it would appear that in consequence of the increase since the census having been, according to the returns, greater there than in this colony New South Wales is now, in point of population, in advance of Victoria or any other Australasian colony.

Population 1 4 1 of Greater 1891.

202. The following table shows the estimated area in acres, the Melbourne, estimated population and the number of persons to the acre at the end of 1891, also the estimated mean population during that year in the various municipalities comprised in Greater Melbourne:

^{*} See table following paragraph 172 ante.

of Greater Melbourne is shown in the fourth column of the table. It will be noticed that the most thickly peopled municipality is North Melbourne, with rather over 37 persons to the acre; then Fitzroy, with 34; Collingwood, with nearly 31; Richmond, with 26; South Melbourne, with 20; Prahran City, with 17; and Melbourne City, with rather less than 15 persons to the acre. In explanation of the fact that some of the suburbs are more densely populated than the city, it will be remembered that large numbers of people who come to business spend their days in the latter, but have their residences, and would therefore be enumerated, in the former. It should also be borne in mind that, in some of the municipalities, extensive parks, gardens, and other public reserves exist, so that the population is really living in closer proximity than the figures indicate. Melbourne City contains

VOL. I.

^{*} In making this calculation, persons in ships were excluded from the total population.

1,723 acres of such reserves; Kew, 634 acres; South Melbourne, 482 acres; Williamstown, 446¹/₄ acres; Flemington and Kensington, 307 acres; St. Kilda, 250 acres; Richmond, 190 acres; Brighton,  $166\frac{1}{2}$ acres; Port Melbourne,  $80\frac{1}{4}$  acres; Essendon,  $65\frac{1}{2}$  acres; Fitzroy, 41 acres; Collingwood, 39 acres; Footscray,  $45\frac{3}{4}$  acres; and there are smaller reserves in some of the other municipalities. If the reserves be excluded, the persons to the acre in the places named would be as follow: Fitzroy, 35.7; Collingwood, 31.6; Richmond, 29.6; South Melbourne, 24.9; Melbourne City, 22.2; Flemington and Kensington, 12.9; St. Kilda, 11.25; Williamstown, 7; Footscray, 6; Port Melbourne, 5.6; Essendon, 3.9; Brighton, 3.2; and Kew, 2.9.

mall increase of 1891.

204. The growth of the population of Greater Melbourne in the population, ten years ended with 1891 was at the rate of nearly 21,000 per annum, but according to estimates carefully prepared by the municipal authorities, this increase has been severely checked, the augmentation between the 5th April and the end of December, 1891, being only 1,046, or at the rate of about 1,400 per annum.

Metropolitan popula-

205. In the following table is shown the area embraced in the tan populations, 1891. metropolis (including suburbs) of each of the Australasian colonies, with the population thereof as enumerated at the last census and estimated at the end of 1891; also the increase of the population of each capital city since the census, the mean population of each during the year, and the density of the population of each at its close:—

POPULATION	OF	AUSTRALASIAN	CAPITAL	CITIES.	1891.
T OT OTWITTOM	OT.	TTUBLIADIAN			1001.

		Popul	ation.	Increase	Mean	Persons to

Wellington	9,032	33,224	33,682	458	$33{,}374$	3.72	

Increase of population since census.

206. According to the estimates made, Sydney is the only capital city in which any substantial increase of population took place between the date of the census and the end of 1891. It will be noticed that, not only in Sydney but in Perth, the estimated numerical increase of

^{*} The census figures are repeated, as no later estimate has been made of the population of Brisbane. † Decrease.

population during the period referred to was greater than in Melbourne.

207. It will, moreover, be noticed that the inhabitants of Greater Density of Sydney dwell in greater contiguity than those of any of the other in capital metropolitan cities, and in both that city and Wellington the people are nearer each other than they are in Greater Melbourne, whilst in Adelaide and Hobart there is less than one person to the acre.

208. There is often considerable difficulty in obtaining a true Population statement of the population of towns, as, in some instances, the population within the limits of the city or municipality only is returned, whilst in others the population of the suburbs is also included; for these reasons, the populations of the different towns given in the published lists are not always comparable with one another. The populations of the Australasian towns given in this work include their immediate suburbs, but it is not by any means certain that the same rule applies to all the towns in the following statement, which, however, has been compiled from the latest and best authorities, and will be found to embrace nearly all towns having as many as 100,000 inhabitants:—

of principal towns of the world.

POPULATION OF PRINCIPAL TOWNS OF THE WORLD.

Town.				Country.		Year of Enumeration or Estimate.	Population.

<u></u>	<b></b>					. " 	

Note.—Some towns in China, not included in the list, are stated to have more than 100,000 inhabitants, but the populations of these are not known with accuracy, and little is heard of them outside the country; they have therefore been omitted. All towns in China having important commercial relations with Europeans, if stated to contain as many as 100,000 inhabitants, have, it is believed, been included in the list.

* This is the approximate population of Greater London, as returned at the census of 1891 The population of Inner London (Registration District) at the same time was 4,211,056. The district of Greater London embraces an area within a radius of 15 miles from Charing Cross.

[†] New York, combined with Brooklyn, from which it is separated by the East River, and Jersey City and Hoboken, from which it is separated by the North River, contained 2,524,392 inhabitants in 1890. This combination, if allowed, would show New York to be the most populous city in the world except London.

Population of Melother cities compared.

209. According to the figures in the table, Melbourne is the most bourne and populous town in the Southern Hemisphere, except Buenos Aires; it is more populous than any town in the United Kingdom, except London, Glasgow, Liverpool, and Manchester; than any town on the continent of Europe, except Paris, Berlin, Vienna, Constantinople, St. Petersburg, Moscow, Hamburg, Naples, and Madrid; or than any town in the United States, except New York, Philadelphia, Chicago, and Brooklyn. It should, however, be remembered that the population of the suburbs is included in the case of Melbourne, but it may not be so in the case of some of the towns which appear by the table to have smaller populations.

Area and population of British dominions.

210. The following table shows the area and the population of the United Kingdom and its various colonies and dependencies. been compiled in the office of the Government Statist, Melbourne, principally from official documents, and embodies the latest available information upon the subject:-

Note.—If Protectorates and "Spheres of Influence" be included, the area of British Dominions (according to the Statesman's Year-Book), would be increased to 11,475,057 square miles, and the population to 378,725,857 persons. The most important of these protectorates are in Africa, the chief being Niger Territories and Oil Rivers, area, 269,500 square miles, population 17,500,000; Zambesia and Nyasaland, area 520,000 square miles, population 950,000; and British East Africa (from Zanzibar to Sokotra), area 1,255,367 square miles, population, 12,875,000.

Australasia compared with other

211. The Australasian colonies occupy about one-third, and Victoria rather less than a hundredth, of the whole area of the possessions. British dominions. The Australasian colonies contain about a ninetieth, and Victoria contains about a three-hundredth, of the population of the whole British Empire. The area of Australasia is somewhat smaller than that of Canada, which is the largest British possession; and the population of Canada exceeds that of Australasia by a million persons. The population of Victoria is exceeded by that of no British dependency except India, The Feudatory Native States, Canada, Ceylon, the Cape of Good Hope, and the Gold Coast.

Foreign countries, area and population.

212. The next table gives the area and population of foreign countries, including all which are of importance. The information

‡ Exclusive of wandering Aborigines.

^{*} The area includes inhabited islands only, which number from 70 to 80; inclusive of uninhabited islands, the area is estimated to be 7,740 square miles. Of the population, in 1891, 108,019 were Fijians; 2,036 Europeans; 1,076 half-castes; 2,267 Polynesians; 7,468 Asiatics (chiefly natives of British India); and others, 314.

[†] For areas of the various colonies, see paragraph 7 ante.

has been drawn from authentic sources, and it is brought down to the latest available dates:—

British dominions compared with foreign countries.

213. According to the last two tables, the British Empire covers an area somewhat larger than European and Asiatic Russia combined, more than four times as large as Russia in Europe, more than twice as large as the Chinese Empire, and over two and a half times as large as the United States; while its population is equal to seven-eighths of that of the Chinese Empire, is more than three times as large as that of the Russian Empire, is five times as large as that of France and its possessions, is five and a half times as large as that of the United States, and nearly seven times that of Germany. Moreover, the area of the British dominions is about seventy-six times, and the population thereof more than nine times, as large as the area and population respectively of the United Kingdom itself.

Density of population in various countries.

214. The most densely populated independent country in the world appears to be Belgium, and the next England and Wales—the former containing five hundred and forty-one, and the latter nearly five hundred, persons to the square mile. Holland comes next, with three hundred and sixty-one; then China, which, according to the latest estimate, contains, even without its dependencies, over a fourth of the total population of the world, with two hundred and eighty-nine persons to the square mile; Japan with two hundred and

^{*} Including Alaska Territory, which contains an area of 577,390 square miles, and a population of 37,000. Indians to the number of 249,273 are also included.

[†] Of the population given 34,436 were natives, 6,186 half-castes, 15,301 Chinese, 12,360 Japanese, 588 Polynesians, and 21,115 whites, principally Portuguese.

seventy-one; Italy next, with two hundred and sixty-four; followed in close succession by Germany, Luxemburg, France, Switzerland, Austria-Hungary, and Denmark. Ireland is a little less densely populated than Denmark, and Scotland is less so than Ireland.

215. In most European countries, females are more numerous Proportions than males, the only exceptions in the following list being Russia, Italy, Servia, Roumania, Greece, and Bosnia. British India and the Asiatic portion of the Russian Empire, Corea, Japan, Canada, the United States, most of the South American Republics, the Cape of Good Hope, and the Australasian colonies also contain more males than females:—

216. Geographers differ as to the area and population of the The world's world and its various divisions. The total land area, however, is generally considered to be something over fifty million square miles, and the total population to something under fifteen hundred millions. The following table contains two of the latest estimates, the number of inhabitants to the square mile being also given:—

^{*} No regular census of the Russian Empire has ever been taken, but an estimate was made by the Government in 1885, which gave the number of males as 54,063,353, and the number of females as 53,883,042; and there were besides 835,840 individuals in Central Asia, of whom the sex was

THE WORLD.—ESTIMATES OF AREA AND POPULATION.

Note.—These estimates have been taken from the Statesman's Year Book, 1892. Estimate A is by Mr. E. G. Ravenstein, F.R.G.S. Estimate B is from Die Bevölkerung der Erde.

Increase in the world's 1880-1890.

217. Mr. Ravenstein estimates that the increase of the population population, of the world and its various divisions during the ten years ended with 1890 has been at the following rate:—Europe, 8.7 per cent.; Asia, 6 per cent.; Africa, 10 per cent.; North America, 20 per cent.; South America, 15 per cent.; Australasia, 30 per cent.; the World, 8 per cent.

**Proportion** of countries named to world.

218. Comparing the totals in the table with those in the lowest line of the table following paragraph 212 ante, it appears that more than three-fourths of the earth's surface, and more than five-sixths of its population, are included in the countries named.

Proportion of British dominions, etc., to world.

219. It appears, moreover, that British dominions cover more than a sixth of the earth's surface, and contain about a fourth of its population; that the Australasian colonies cover a little over a seventeenth of its surface, but contain only about a four-hundredth of its population; and that Victoria does not cover much more than a sixhundredth part of its surface, and contains less than a fourteenhundredth of its population.

Available land of the world.

220. It has been estimated that of the land of the earth, exclusive of the polar regions, 61 per cent. is fit for agriculture, 30 per cent. consists of steppes and mountains, a considerable portion being probably fit for pastoral purposes, and 9 per cent. is desert.

^{*} Beyond the north limit of cereals.

recorded.

- 221. In the following paragraphs the immigration and emigration overland referred to is by sea only; the results given would probably be greatly not modified if the overland traffic, of which no record is available, were to be taken into account, more especially since the facilities for overland intercourse with the neighbouring colonies have been greatly increased by the extension of railways. The insufficiency of the present returns of immigration and emigration to supply material for supplementing the return of births and deaths, for the purpose of forming estimates of population between the census periods, has more than once been brought under the notice of the Government by the Government Statist, who has suggested that steps should be taken to obtain a record of the arrivals and departures overland; but it seems that difficulties, at present supposed to be insuperable, stand in the way of taking note of such persons, and therefore there is no alternative but to leave them out of account altogether. It is evident that, supposing the returns of those who come and go by the seaboard are correct, and the births and deaths are all registered, the population estimates must always understate or overstate the truth, according as the arrivals or the departures overland are the greater.
- 222. In consequence of the system pursued in keeping the records Returns of of immigration and emigration—the practice being to set down all arrivals and departures who pass through Victorian ports on their way to other colonies and unduly swelled. countries as both arriving in and departing from this colony-Victoria, being situated between South Australia and Western Australia on the one hand and New South Wales and Queensland on the other, seems always to have an unduly large number of persons coming in and leaving, whereby an impression is created that great numbers come to Victoria, but, being dissatisfied with their prospects in this colony, betake themselves elsewhere. If all are recorded accurately, the result showing those who remain would be correct; still it is to be regretted that some means could not be found of keeping the account without including a number of persons who have had no connexion whatever with the colony, and perhaps may have never so much as even landed
- 223. The arrivals and departures by sea* recorded during 1891, Immigraalso the excess of the former over the latter, were as follow:—

emigration,

L

on its shores.

^{*} All the figures relating to arrivals in the colony, and departures therefrom, contain statements of those who come and go by sea only. No attempt is made to keep an account of those who cross the frontier from and to the adjacent colonies. It has already been mentioned that the number of persons departing by sea is habitually understated. The number of immigrants and emigrants recorded in each year will be found in the Statistical Summary of Victoria (first folding sheet), published in the second volume.

Immigration and Emigration, 1891.

		Males.	Females.	Total.
Arrivals by sea Departures by sea		 41,537 $36,033$	20,911 17,139	62,448 53,172
Excess of arrivals	,	 5,504	3,772	9,276

Gain by immigration, 1890 and 1891 compared.

224. The records of both arrivals and departures show much smaller numbers for 1891 than for 1890—the former by 17,329, and the latter by 10,648; the apparent net gain being less than in 1890 by 6,681, viz., 3,927 males and 2,754 females.

Adults and children arriving and departing.

225. The immigration authorities do not note the exact ages of the persons arriving and departing, but classify them as adults, or those from 12 years of age upwards; as children, or those between 1 year of age and 12 years; and as infants, or those under 1 year. The following are the numbers under each of those heads who came and went during 1891:—

ARRIVALS AND DEPARTURES OF ADULTS, CHILDREN, AND Infants, 1891.

	•			Adults.	Children.	Infants.	Total.
Arrivals Departures	•••	•••		57,807 47,848	4,131 4,586	510 738	62,448 $53,172$
Immigr	ation in	n excess	• • •	9,959	-455*	-228*	9,276†

Arrivals from and for different countries.

226. In consequence of the practice which exists of recording the departures ports of original departure and final destination of the ships as being also those of all the passengers, instead of noting the ports at which the respective passengers joined the vessel and those at which they stated their intention of leaving it, much doubt must exist as to the accuracy of the records showing the countries from which persons who arrive in the colony came, and to which those who left it went. returns, however, as furnished by the immigration authorities, are given for what they may be worth:—

^{*} Excess of emigration.

^{*} Where the minus sign (-) occurs it indicates that emigration was in excess of immigration by † Net figures. the number against which it is placed.

Net immigration from various countries.

228. It would appear from this table that the colony gained population from the United Kingdom in all the periods shown, except during the first three months of 1891, when there was a slight loss; that it gained in all the periods from foreign countries, Tasmania, and New Zealand; that, moreover, it gained from the western colonies in all the years except 1890 and 1891, but lost to the eastern ones in all the periods but five, the net loss in that direction being over 8,000 in the eleven years. The largest apparent gain in any one year (42,000) was in 1888, that being the year of the Melbourne Centennial International Exhibition; the next largest gain (25,000) was in 1886, when the net immigration was much larger than in any other year except the Exhibition year alluded to. It should be borne in mind that so far as migration by the seaboard is concerned, which is that to which the table refers, the returns inwards are fairly correct, whilst those outwards invariably understate the truth, and chiefly for this reason the recent enumeration of the population, taken in connection with the registrations of births and deaths, revealed the fact that in the recent intercensal period the actual gain by immigration was only 168,000, as against 183,000 shown by the addition of the figures in the last column of the table, omitting those in the last line.

Stateassisted immigration. 229. In the twelve years 1871 to 1882, 5,547 immigrants from the United Kingdom had free or partially free passages granted them to Victoria. Of these, 3,212, or 58 per cent., arrived in the first year, and 5,168, or 93 per cent., in the first three years of the period alluded to. The number then declined rapidly from year to year, and since 1873 only 379 such immigrants have arrived. Of these only 5, all females, came in 1880, not one in 1881, and only 2 in 1882. Since 1882 no free or assisted immigrants have been introduced by the State.*

Chinese immigration, 1891.

230. The Chinese immigrants included in the returns of 1891 numbered 293 all but 3 of whom were males, or 61 more than in 1890, and 169 more than in 1889. The number of Chinese emigrants during 1891 was 604, viz., 603 males and 1 females, as compared with 583 males and 10 females in 1890.

Chinese where from and where to.

231. Of the Chinese who arrived in 1891, 2 came from New South Wales and Queensland, 138 from Tasmania, 29 from New Zealand, 1 from South Australia, 74 from the United Kingdom and France, and 49 from Hong Kong. Of those who left, 54 went to New South Wales, 13 to South Australia, 2 to New Zealand, and 535 returned to Hong Kong.

^{*} For number of State-assisted immigrants, not only in Victoria but also in the neighbouring colonies, for each year since 1850, see last issue of this work, Vol. II., page 484.

232. In the last ten years the Chinese population apparently Arrivals and decreased by 136. In the first three and in the last four years of of Chinese, that period there was a loss by the departures of Chinese being in 1891. excess of the arrivals, which was not counterbalanced by the reverse process during the three years prior to 1888, as will be seen by the following figures:-

ARRIVALS AND DEPARTURES OF CHINESE BY SEA, 1882 то 1891.

Note.—The figures in this table refer to immigration and emigration by sea only.

† Where the minus sign (-) appears the departures exceeded the arrivals by the number against t Exclusive of the Northern Territory. § Net figures. which it is placed.

^{*} The figures in these columns understate the truth. Many persons leave all the colonies by sea without their departure being noted.

Net gain by immigration to Australia and Australasia.

234. The figures in the table indicate the persons going from colony to colony, as well as those arriving from, and departing for, distant countries. The figures in the total and grand total lines of the last three columns, however, ought to show the net gain to the population of Australia and Australasia by immigration. By the last of these columns it is seen that, in 1891, the Australian continent apparently gained nearly 37,000, and the continent, with the addition of Tasmania and New Zealand, apparently gained over 39,000 inhabitants. corresponding figures for 1890 were 51,139 and 51,804; those for 1889 were 48,802 and 51,688; those for 1888 were 73,844 and 65,599; those for 1887 were 61,732 and 65,041; and those for 1886 were 63,144 and 64,947. Many persons, however, leave all the colonies by sea without their departure being noted; therefore the actual gain from without is always less than the records indicate.

Net gain in Zealand.

235. It will be noticed that the net immigration during the year Victoria, loss in New was very much larger to Victoria than to any other colony of the group, except New South Wales; also that New Zealand was the only colony in which there was a recorded loss of population by emigration.

Order of colonies in respect to gain by immigration.

236. The following, according to the table, is the order in which the colonies stood during 1891, in reference to the net increase of their populations from external sources:—

ORDER OF THE COLONIES IN REFERENCE TO EXCESS OF IMMIGRANTS OVER EMIGRANTS, 1891.

- 1. New South Wales
- 2. Victoria
- 3. Tasmania
- 4. South Australia

- 5. Western Australia.
- 6. Queensland
- 7. New Zealand (emigrants exceeded immigrants)

Immigration and emigration in Australasian colonies, 1882-91.

237. The arrivals in and departures from each Australasian colony by sea, and their difference, were as follow in the ten years ended with 1891, the arrivals of persons whose passages were paid, either wholly or partly, by the Colonial Governments, being distinguished from those who made their way to the colonies without State assistance:—

IMMIGRATION AND EMIGRATION RETURNS OF THE AUSTRALASIAN Colonies, 1882 to 1891.

Note.—The minus sign (-) indicates that the emigrants exceeded the immigrants by the number to which it is prefixed.

Immigration and emigration in different years.

238. The returns show that more persons have in all the years departed from Victoria than from any of the other colonies; but it has been already explained§ that many of these only pass through the ports of the colony on their way to other places. In the three years ended with 1885, the arrivals in New South Wales were more numerous than those in Victoria, but in all the other years the arrivals in Victoria exceeded those in any other colony. In 1888 the net

§ See paragraph 222 ante.

^{*} See footnote (*) on page 151. † See footnote (†) on page 151. † The numbers assisted and unassisted were not distinguished.

immigration to Victoria was much larger than that to New South Wales, but the reverse was the case in all the other years named.

239. The returns of assisted immigration in 1891 have not come order of to hand, but in 1890 immigration received little or no State assistance in Victoria, South Australia, Western Australia, Tasmania, or New Zealand; but it was still largely subsidized in Queensland, and to a less extent in New South Wales. The following are the differences between the number of persons who arrived in the various colonies entirely at their own expense and those who left them in that year; the colonies being placed in order:—

colonies in respect to gain by unassisted immigra-

Note.—Besides the cities, towns, and boroughs, there are several large towns in Victoria which form portions of shires. These, with their populations at the census of 1891, were as follow:—Kyneton, 3,371; Bairnsdale, 3,000; Maldon, 1,692; Benalla, 2,455; Beechworth, 2,528; Shepparton, 1,678; Walhalla, 1,771; Colac, about 2,000; Camperdown, 1,434; Avoca, 787. For other towns, which were formerly boroughs, see footnote to paragraph 197 ante.

241. The next table gives a list of the shires, numbering 137; Shires, 1891. together with a statement of the estimated area, population, and number of dwellings; the total and annual value of rateable property, and the total revenue of each shire, during the year 1891:—

[†] The financial year of the shires ends on the 30th September.

‡ A portion of the Shire of Traralgon was severed therefrom and added to Shire of Woorayl on the 28th April, 1891.

§ See footnote (**) on page 157.

palities.

- 243. The estimated area of Victoria is 87,884 square miles. It Proportion to total thus appears that all but about a one-hundredth part of this area is area of Victoria. included within the limits of municipal districts.
- 244. The population of the two kinds of districts, as estimated by Population of municithe municipal authorities, was as follows at the end of 1891: palities.

### Population of Municipalities, 1891.

Cities, towns	, and bord	oughs	• • •	• • •	•••	$620\ 258$
Shires	•••	•••	•••	• • •	•••	<b>52</b> 3,699
	Tot	al	•••	•••	•••	<b>1</b> ,143,957

245. According to the recent census, the shore residents living Population outside municipalities numbered only 91, whilst persons in ships and municivessels numbered 2,439, or 2,530 in all. The population enumerated being 1,140,405, it appears that all except a four hundred and fiftieth were enjoying the benefits of local self-government.

246. The ratepayers in the two kinds of municipal districts Ratepayers numbered as follow, in 1891. Each ratepayer is not necessarily a palities. distinct individual, as ratepayers having property in more than one municipality, or more than one ward or riding of the same municipality, are entered on the municipal roll for each such property:—

#### RATEPAYERS IN MUNICIPALITIES, 1891.*

Cities, towns, Shires	and borou	ighs 	•••	•••		138,218 138,919
	Tota	l	•••	•••	•••	277,137

247. The following is a statement of the number of dwellings in Dwellings the two kinds of municipal districts as returned at the end of 1891:— in municipalities.

### DWELLINGS IN MUNICIPALITIES, 1891.

Cities, towns, and borough Shires	ns 	•••	•••		136,084 112,447
Total	•••	•••	•••	•••	248,531

248. According to the recent census returns, the average number Persons to of inhabitants to a dwelling is about  $4\frac{2}{3}$  in both descriptions of in munici palities. municipalities; the exact proportions being 4.70 in cities, towns, and boroughs, and 4:66 in shires.

^{*} Including both male and female ratepayers; also ratepayers whose rates are in arrear.

Area, population, etc., in shires and boroughs compared.

249. The area contained in shires is about 250 times that in cities, towns and boroughs; but the population in the latter exceeds that in the former by nearly a fifth, and the dwellings in the latter exceed those in the former by rather more than a fifth.

Amount of rating in municipalities.

250. The following is the number of cities, towns, and boroughs, and the number of shires, in which rates were struck in each of the last five years at the amounts set down in the first column:—

High and low ratings

251. It will be observed that no municipality during the last five years was rated at the lowest amount allowed by law, viz., 6d. in the pound; also, that only one municipality in any of the years levied rates up to the full amount allowed by law, viz., 2s. 6d. in the pound.

Municipalities rated at 1s. in the pound.

252. Of the cities, towns, and boroughs, 37 per cent. in 1887, 36 per cent. in 1888, 32 per cent. in 1889, 31 per cent. in 1890, and 28 per cent. in 1891, were rated at 1s. in the pound; of the shires 90 per cent. in 1887, 88 per cent. in 1888, 87 per cent. in 1889, 86 per cent. in 1890, and 93 per cent. in 1891, were rated at the same amount.

^{*} Including general and special rates.

tion of pro-

253. In 1887, 4; in 1888, 6; in 1889, 5; in 1890, 4; and in Municipali-1891, 3; municipal districts were rated at less than 1s. in the pound. under and In 1887, 44; in 1888, 45; in 1889, 52; in 1890, 55; and in 1891, 47 the pound. municipal districts were rated at over that amount.

254. The number of properties in cities, towns, and boroughs, and Classificain shires, during the eighteen years ended with 1891, arranged in perties groups according to their rateable values, will be found in the following table. In 1891 as compared with 1890 the increase of the whole number of properties was 9,387, of which 3,557 were in cities, towns, and boroughs, and 5,830 in shires. All the groups relating to both kinds of municipalities showed increase except those relating to properties rated at between £300 and £400 in the case of cities, towns, and boroughs, and those relating to properties rated at between £200 and £400, and at £500 and over in the case of shires:—

CLASSIFICATION OF PROPERTIES RATED, 1874 TO 1891.

Increase in seventeen years.

255. In the seventeen years ended with 1891 the total increase in the number of properties was 172,923, of which 77,833 were in cities, towns, and boroughs, and 95,090 in shires.

Total value of rateable property.

256. The following table gives the estimated total value (or value in fee simple) of rateable property in cities, towns, and boroughs, and in shires, during the seventeen years ended with 1891, arranged in groups according to the value of the properties of which the amounts are made up. In 1891, as compared with 1890, an increase occurred in the value of properties rated under all the heads in cities, towns, and boroughs, and all the heads but that relating to properties valued at £200 or upwards in shires. The valuation on the whole showed an increase of £9,037,714, made up of an increase of £5,049,124 in urban, and of £3,988,590 in country properties:—

Increase in total value

257. According to the above table the total value of rateable of property. property in urban and rural municipalities combined has nearly doubled in the last seven years; and that in cities, towns, and boroughs has nearly doubled in the last six years; but that in shires has not quite doubled in the last eight years.

Annual value of rateable property.

258. The annual value of rateable property is arranged in similar groups in the next table. In 1891, as compared with the previous year, there was an increase of £308,227 in the urban, and of £160,000 in the country, properties—thus resulting in a total increase of The only group which shows decrease is that embracing properties of an annual value of £200 and upwards in shires:—

1891	5,641,260	2,498,580	1,748,420	3,845,510	13,733,770

259. During the seventeen years ended with 1891 the total Increase in increase in the annual valuation of rateable property has amounted value of to £7,738,293, viz., to £4,284,788 in cities, towns, and boroughs, and to £3,453,505 in shires.

260. The increase in the value of rateable properties is no Increase in doubt partly due to the greater extent and number of properties rated, as well as to the improvements made. The following table ties rated. shows the total increase, and the increase under each group in the number of properties, and in their total and annual values, during the seventeen years intervening between 1874 and the end of 1891

and value of properthe increase in cities, towns, and boroughs being added to that in shires:—

INCREASE IN NUMBER AND VALUE OF RATEABLE PROPERTIES, 1874 TO 1891.

		Increase during Seventeen Years in the—							
Rateable Values.		Number of Properties.	Total Value.	Annual Value.					
Under £50		149,140	£57,280,830	£3,068,254					
£50 to £100		22,105	26,874,027	1,468,382					
£100 to £200		7,330	18,931,459	1,051,479					
£200 and upwards	• • •	4,348	38,043,405	2,150,178					
Total increase	• • •	172,923	£141,129,721	£7,738,293					

Largest increase in small properties. 261. By far the greatest increase in the number of properties, amounting to four-fifths of the whole increase, was in properties rated at less than £50; moreover, the largest increase in the total and in the annual value of properties, amounting in each case to about two-fifths of the total gain, was in properties of that rating. The next largest increase in the value of properties was in those rated at at £200 and upwards, which, in the case of both the total and the annual value amounted to between a third and a fourth of the whole increase.

Naturalization. 262. In Victoria, a foreigner, even if naturalized, is not eligible to become a member of the Executive Council, but, with this exception, the highest offices of the State are open to naturalized persons of foreign as well as of British birth; and, without becoming naturalized, alien friends resident in the colony may acquire real and personal property, and may convey, devise, and bequeath it in the same manner as if they had been British subjects by birth. Alien women married to British subjects thereby become naturalized; but to become a member or elector of either House of Parliament it is necessary for a foreigner to take out letters of naturalization, to procure which, in accordance with the provisions of the Aliens Act 1890 (54 Vict. No. 1,063), he must present a memorial to the Governor, stating his name, age, birthplace, residence, occupation, period of residence in the colony, and his desire to settle therein, which memorial must be accompanied by a certificate from a magistrate, to the effect that he is known to be

the person signing and is of good repute. Should letters be granted, the applicant, before they are issued, must take an oath of allegiance to the Sovereign of the United Kingdom of Great Britain and Ireland. The following table shows the native countries of those who obtained letters of naturalization during the year 1891 and the previous twenty years:—

NATURALIZATION, 1871 TO 1891.

#### PART III.—FINANCE.

265. The following is a statement of the revenue and expenditure Finance of Victoria in the financial year ended on the 30th June, 1891; the 1890-91. excess of the latter over the former; the credit balance brought forward from 1889-90, and the debit balance carried forward to 1891-2:—

### FINANCE ACCOUNT OF VICTORIA, 1890-91.*

(Exclusive of recoups and special expenditure.+)

					£	s.	d.
Receipts	• • •	• • •		• • •	8,343,587	18	4
Expenditure	•••	• • •	•••		9,128,698	16	9
Expenditure in	excess of		• • •	785,110	18	5	
Credit balance	from 1889	-90	•••	• • •	578,268	0	9
Debit balance	carried for	ward to 18	391-2		206,842	17	8

266. During the financial year under review, the expenditure Large debit exceeded the receipts by £785,111; but after allowing for the large credit balance brought forward from the previous year, viz., £578,268, there remains a net debit balance of £206,843 to be carried forward This is the first debit balance which has occurred during to 1891-2. the last ten years.

267. With reference to this debit balance, however, it should be accounts stated that an exceptionally large amount (nearly £641,000) was paid during the last two years to wipe out all arrears remaining over from previous years, with a view of placing the accounts upon a sound footing. Thus the expenditure incurred in each of the last four financial years, but charged forward in each case to the subsequent year, was as follows:—£507,123 in 1887-8, £658,936 in 1888-9, £153,226 in 1889-90, and £18,258 in 1890-91. As against the last-named amount, however, the Audit Commissioners point out that there is a set-off of £15,498 by amounts received at country revenue offices in

placed on footing.

^{*} According to a statement distributed to members of the Legislative Assembly on the 28th July, 1892, by the Honorable the Treasurer, the revenue of 1891-2 was £7,728,828, and the expenditure was £8,639,900, the latter thus exceeding the former by £911,072, which amount being added to the balance at the beginning of the financial year, leaves a debit balance of £1,117,915, which, being added to the balance at the debit of the Land Sales by Auction Fund, £416,410 (which it is proposed to charge to the general revenue account), results in a total debit balance of £1,534,325 to be carried forward. The estimated population at about the middle of the same twelve months was about 1,157,678; so that the revenue per head was £6 13s. 6d., and the expenditure per head £7 9s. 3d. These figures are not final. Further details are given in an Appendix published at the end of this

[†] For particulars of recoups, see paragraph 283; and for special expenditure, see table following paragraph 294, post.

June, but not brought to account in the Treasury until July. Thus, all arrears having virtually been paid off, the year 1891-2 is practically free from the liabilities of former years. In accordance with established custom, the interest on the public debt is still charged to the year in which it is payable; interest accrued, but not payable until after the close of any year, being charged to the subsequent year. The amount of interest which had accrued in 1890-91, but was not payable until 1st July and 1st October of the ensuing financial year, was £730,992.

Net revenue and expenditure.

268. In the following table the receipts and expenditure, exclusive of advances recouped and to be recouped, are given for each of the seventeen financial years ended with 1890-91; also the surplus or deficiency of revenue in each year, and the credit or debit balances carried forward from year to year:—

NET PUBLIC REVENUE AND NET PUBLIC EXPENDITURE, 1874-5 to 1890-91.*

	Excluding Advances Recouped and to be Recouped.								
Year.	Public Revenue.	Public Expenditure.	Surplus (+). Deficiency (-).	Balances carried forward Credit (+). Debit (-).					
	£	£	£	£

1887-8	7,607,598	7,287,151	+ 320,447	+948,758					
1888-9	8,675,990	7,919,902	+756,088	+1,704,846					
1889-90	8,519,159	9,645,737	-1,126,578	+578,268					
1890-91	8,343,588	9,128,699	-785,111	-206,843					

Years of highest and lowest surplus and deficiency, etc. 269. It will be noticed that the gross revenue showed a surplus in eight and a deficiency in nine of the years named. On the whole, the deficiencies were larger than the surpluses, as the credit balance

^{*} For particulars relating to earlier years, see Victorian Year-Book, 1889-90, Vol. I., paragraph 243.

[†] For amounts of advances and recoups, see tables following paragraphs 285 and 292 post.

amounting to £120,000 carried forward at the end of the first year has disappeared, and its place at the end of the last year has been supplied by a debit balance of £207,000. By far the largest surplus of revenue was in 1888-9, when it exceeded by nearly onethird of a million sterling that in 1881-2, which was the next largest. The credit balance carried forward at the end of 1888-9 was also much larger than that in 1887-8, which in turn was much larger than in any other year. The largest deficiencies of revenue were in 1889-90 and 1890-91, when they exceeded by over £830,000 and nearly £500,000 respectively, the deficiency in 1878-9, which was the largest after these.

270. No changes were made in the taxation of the people in 1890-91, Changes in but several changes, carried out in the previous year, continued to affect source of revenue. the revenue during the year under review. Thus, on the one hand, the Customs duties on tea, coffee, and cocoa, which were either remitted or considerably reduced in 1889-90, showed a further actual loss in 1890-91 of about £26,100; moreover, duties on several other articles, which were mostly increased, were estimated to, but did not, result in a net further gain of £52,500 to the revenue of the year, on the assumption that the importation of the articles affected would not fall off.* As a matter of fact, however, the revenue from Customs duties as a whole fell off by over £130,000, owing partly to some of the duties having become prohibitory, but chiefly to a gradual contraction in the general imports since 1888-9, when they were partly by the Melbourne Centennial International Exhibition held during that year, and partly by the great excitement, which was then at its height, in connexion with land, mining, and other speculations. Moreover, the excise duty on tobacco was reduced (in 1889-90) at an actual loss on the year under review of about £11,000; and the rate of tonnage dues on vessels was reduced at a loss of about £9,100. An unforeseen decrease of about £215,000, as compared with 1889-90, also occurred in the amount received from duties on estates of deceased persons—a source of income which is naturally subject to fluctuations. As regards other sources of revenue, the railways were extended by an average length of 321 miles during the year; and, in consequence, the revenue derivable therefrom might be expected to increase, allowing £1,340 per mile, † by about £430,300.‡

* See also paragraph 342, and table following paragraph 348, post.

See table following paragraph 196 in Vol. II. of the last edition of this work.

1 Owing to a falling off of traffic the railway revenue, however, increased by only £172,500, as will be shown hereafter.

Revenue 1890-91 and previous years.

271. The revenue of 1890-91 was smaller by £332,000 and £176,000 than the revenues of 1888-9 and 1889-90 respectively; it was, however, much larger than that raised in any year prior to those two. The year in which the next largest revenue had previously been realised was 1887-8, when, however, it was about £736,000 less than in the year under review. In the ten years ended with the year under review the revenue increased from £5,200,000 to £8,300,000, or by 60 per cent., the population during the same period having increased by only 32 per cent.*

Expenditure 1890-91 and former years.

272. The expenditure in 1890-91 was much larger than in any previous year except 1889-90. The amount was less than in that year by over £517,000, but exceeded that in 1888-9—the year in which the next largest expenditure occurred—by about £1,210,000.† It should be pointed out, however, that the amounts in the last two years were exceptionally large, from the fact of their including many items which are non-recurring. Prior to 1853, the annual expenditure never exceeded one million sterling; from 1853 to 1872-3 it was usually nearly up to or slightly over three millions; from 1873-4 to 1879-80 it was between four and four and three-quarter millions; from 1880-81 to 1883-4 it ranged from five to nearly five and three-quarter millions; from 1884-5 to 1888-9 it increased from six to nearly eight millions sterling; whilst in the last two years it exceeded nine millions.

Revenue and expenditure per head, 1351 to 1890-91.

273. The revenue and expenditure per head for each year from that of separation from New South Wales to 1890-91 will be found in the following table:—

REVENUE AND EXPENDITURE PER HEAD, 1851 TO 1890-91.

274. The revenue per head in 1890-91 was less by 7s. 2d., and the Revenue expenditure per head was less by 13s. 9d., than in the previous year. The former was also considerably lower than in 1888-9, about the same as in 1887-8, but larger than in any other previous year formed years. since 1857; whilst the latter was larger than in any year since 1854, except 1889-90. It will be observed that, in proportion to population, the revenue and, as a consequence, the expenditure declined pretty steadily year by year from 1862 to 1872-3; but since then a gradual increase has taken place, which, with slight fluctuations, has been maintained up to the present time. In 1888-9 the

1890-91 and

^{*} The financial year was changed in 1871 so as to terminate on the 30th June instead of on the 31st December as formerly.

revenue per head, and in 1889-90 the expenditure per head, was exceptionally high.

Revenue estimated

275. In the thirty-five and a half years ended with 1890-91 the and raised revenue raised exceeded the Treasurer's estimate on twenty-one occasions, or by £4,789,754; and was less than that estimate on fifteen occasions, or by £2,714,376. Deducting the latter from the former, the net amount by which the result exceeded the estimate is found to have been £2,075,378. The following table shows the revenue estimated and actually raised, also the difference between those amounts, in each of the years:—

REVENUE ESTIMATED AND RAISED, 1856 TO 1890-91.

Note.—Recoups are deducted for all the years since 1873-4. See summary at end of table following paragraph 285 post.

276. The year in which the revenue exceeded the estimate by the years of largest amount is shown to have been 1888-9, the excess being £883,366, which is £240,000 larger than in 1887-8, and over two and a half times as large as the next largest excess (£348,428) in 1881-2; whilst that in which it fell most short of the estimate was 1879-80, viz., by £608,201, which was more than twice as large as the deficiency in 1890-91.

277. The sums voted by the Legislature in any year exceed, as Expenditure is well known, those actually spent, the difference being sometimes erroneously designated the "savings" of the year The following table shows the amounts voted and expended and the difference, in each of the thirty-five and a half years ended with 1890-91:—

authorized and incurred.

1887-8	5,635,949	5,324,347	311,602
1888-9	6,364,193	5,869,351	494,842
1889–90	7,850,859	7,196,089	654,770
1890-91	7,191,162	6,795,508	395,654

Note.—The amount voted for 1891-2 was £6,621,075 (including amount under supplementary estimates), and the approximate expenditure from votes in that year was £5,958,466, leaving an unexpended balance of about £662,600. The probable expenditure from votes in 1892-3 was estimated in July, 1892, at £5,538,905.

Amount unexpended, 1856-91.

278. By adding the figures in the last column, it is found that the sum of the unexpended balances in the thirty-five and a half years amounted to nearly  $9\frac{2}{3}$  millions sterling, the exact amount being £9,642,175, or to an average of about £271,600 per annum.

Heads of revenue, 1890-91.

279. The various sources from which the revenue of Victoria is revenue, 1889-90 and derived may be grouped in five main divisions, viz:—Taxation, Crown Lands, Railways and other Reproductive Public Works, Post and Telegraphs and Other Sources. In 1890-91, £3,253,000, or 39 per cent., was derived from taxation; £613,000, or 7 per cent., from Crown Lands; £4,093,000, or 49 per cent., from what may be termed the commercial undertakings of the Government, viz.:—Railways, Water Works, and Post and Telegraphs, to which the railways alone contributed as much as £3,306,000, or nearly 40 per cent. of the total revenue; whilst the balance amounting to £384,000, or about 5 per cent. of the whole, was derived from other sources. Revenue, amounting to £613,000, by far the greater proportion, or £476,000—being equal to nearly 6 per cent. of the total revenuewas derived from the sale of public land, which, being a receipt arising from the realization of one of the most valuable assets of the country, is obviously not a permanent source of income. Portion of this amount is properly treated as capital, for on reference to the statement of expenditure it will be seen that a sum of nearly £107,400 was paid during the year towards the construction of railways as directed by the Land Act 1884,* which provides that all proceeds arising from the sale of public lands by auction shall be paid to the credit of the Railway Construction Account. In the last two years, however, the amount so paid represented only between one-fifth and one-sixth of the total proceeds from land sales, the great bulk of land alienated being disposed of otherwise than at auction. receipt in 1889-90 amounting to £140,000 was derived from the sale of the old Police Court site, the proceeds of which have not been allowed to merge into the general revenue, but have been set apart for various public works.† The following is a statement of the amounts received under different heads; in each of those divisions during the last two financial years, together with the increase or decrease under each head:—

HEADS OF REVENUE, 1889-90 AND 1890-91.

^{* 48} Vict., No. 812, section 78.

[†] See table following paragraph 295 post.

t The heads of Revenue and Expenditure are arranged according to a classification agreed upon at a conference of representatives of several of the Australian colonies, upon the subject of statistics, which was held in Tasmania in January, 1875.—See Report of Conference, with introductory letter by the Government Statist of Victoria, Parliamentary Paper No. 11, Session 1875.

§ Tonnage rate reduced from 1s. to 6d. per ton on 1st January, 1890.

Estimated roughly, as the Postal Authorities are unable to furnish reliable statements in consequence of stamp duty, postage, and fees, all being collected by means of one class of stamps. The telegraph revenue is also collected by means of stamps; but as there are other means of ascertaining this, the figures may be taken as correct. The "Postal receipts" include commission on money orders and postal notes. The inland letter rate was reduced from 2d. to 1d. on 1st January, 1890.

^{*} Net figures.

[†] Including interest on loans to local bodies for waterworks, etc.

[‡] See footnote (||) on page 177.

[§] Embracing amounts received by departments which are not charged, or are only casually charged, with the collection of revenue, such as proceeds of the labour of prisoners, sums paid for the care of lunatics and of children in Industrial and Reformatory Schools; for the service of the police when specially applied for; for the sale of works by the Government Printer; for the storage of gunpowder; for quarantine expenses, etc.

[|] Derived from sale of the Melbourne Police Court to the City Council. For expenditure of the proceeds, see table following paragraph 295 post.

[¶] Exclusive of recoups. The amount expended in former years and recouped from loans, etc., in 1889-90 was £116,906, but in 1890-91, nil.

various heads.

280. Comparing the ordinary revenue of 1890-91 with that of the Diminished previous year, it will be observed that the total net decrease, viz., 1890-91, under £175,600, resulted from a falling-off of £422,900 under certain heads -chiefly Taxation and Postal receipts, less an increase of £247,300 under others-more especially Public Works, Land revenue, and Miscellaneous receipts. The falling-off under Taxation amounted to as much as £378,000, of which £215,000 was in consequence of the smaller amount derived from estates of deceased persons, an item which naturally fluctuates considerably, whilst the remainder is chiefly accounted for by the diminished Customs revenue. In consequence of the rate for inland letters being reduced from 2d. to 1d. from the 1st January, 1890, the Postal receipts, etc.—which, besides receipts from postage, include commission on money orders, proceeds of parcels post, etc.—show an apparent falling-off of £31,000, in addition to £49,000 in the previous year, or about £80,000 in all; but eliminating commission on money orders, etc., the estimated revenue from postage alone fell off during the last two years by about £86,000, which proves to be £10,000 below the estimated loss. On the other hand the Telegraph revenue continues to expand, although the increase in 1890-91 (£4,000) was not nearly so large as that in the previous year, viz., £22,700; whilst the total increase since 1883-4, just before considerable reductions were made in the rates, was £89,700, or over 100 per cent. It should be noted, however, that over £37,000 of this is derived from the telephone exchanges, taken over by the Government in September, 1887. The increase in the land revenue amounted to £33,700, which is due to the alienation of Crown lands, the amounts derived from rentals remaining almost stationary. In the Public Works division the increase exceeded £195,000, being made up of £172,500 under Railways, which, however, is less by £257,500 than the amount which might have been expected (viz., £430,000)* from the increased length of line open for traffic; £13,300 under Metropolitan Waterworks; £7,500 under Country Waterworks, due merely to increased interest on growing advances to Waterworks and Irrigation Trusts; and £1,800 to other Public Works. Under "Other Sources" there was a falling-off of £10,000 in the interest received on the public account; but, on the other hand, this was more than counterbalanced by an increase of £12,000 in Miscellaneous receipts.

281. In reference to the postal revenue, it should be pointed out Estimates of that, although carefully estimated in the office of the Government

revenue unreliable.

Statist, it may be wide of the mark, the data available being, for reasons already explained,* inadequate to show with certainty the progress of this important branch of revenue; and the reductions made from time to time in the postal rates still further increase the difficulty of forming a correct estimate. The total stamp revenue in 1890-91 was £751,330, but after deducting the amount received on account of telegrams, which is known, there remains a balance of £612,010 for stamp duty, postage, and fees, as compared with £662,649 in 1889-90. Thus the stamp revenue, exclusive of telegraphs, showed a decrease of £50,639 as compared with that received in the previous year, and one of £87,207 in 1889-90, as against an increase of £82,286 in 1888-9, of £140,792 in 1887-8, of only £1,465 in 1886-7, of £36,931 in 1885-6, and of £43,372 in 1884-5.† Of the decrease in 1890-91, about £36,000 was estimated to have been due chiefly to the reduction in the rate of postage just alluded to, against which must be set off an increase of about £1,100 from the parcels post; and, after allowing a reasonable reduction for fees, a balance of £12,000 was set down to stamp duty (taxation). importance of distinguishing stamp duty (taxation) from postal revenue and fees has often been referred to in previous issues of this work, but there is still no reliable information on the subject.

Heads of revenue detailed.

282. The heads of revenue arranged in the preceding table are necessarily comprehensive; but, in order to give some idea of the subordinate items embraced therein, the details for the two years under some of the more important heads, except taxation, which will be dealt with later on, are summarized below:—

HEADS OF REVENUE DETAILED, 1889-90 AND 1890-91.

^{*} Including £534 costs, etc., mining leases, etc., in 1889-90, and £462 in 1890-91; also £1,004 confiscated money and property in 1889-90, and £1,324 in 1890-91.

[†] Consisting of £3,549 storage of gunpowder, £5,214 for Police protection, £712 percentage on payment of Imperial pensions, £1,000 from Harbour Trust for collection of wharfage, £154 for hire of punts, etc., from Public Works Department; £3 for work performed by Lands Department, £706 for services of dock staff, and £144 of Customs Department; £500 charter of steamer, £884 towards maintenance of lighthouses from Colonial Governments.

[‡] The total amount shown in this line (£13,883), besides £211 in hands of Agent-General, is all that remained out of £277,000 voted in the years 1886-7 to 1888-9. See footnote (†) to page 154, post. The net cost of the Exhibition, including £7,694 for cost of restoration of grounds and buildings, was £247,397.

[§] Including £15 for interest paid by Kara Kara Shire. For amounts lent see page 204, post.

283. The revenue as shown in the table at page 178 is exclusive of Recoups. There were no recoups to revenue in 1890-91, but in the previous year they amounted to £116,906.*

284. At the end of the financial year 1890-91, the total amount Unrecouped owing to the revenue was about £337,000, as compared with about 1890-91. £336,000 at the end of June, 1890. Of the former sum £136,584, or two-fifths, consists of advances to shires for the erection of rabbitproof fencing; and £190,882, or 57 per cent., is for interest due by Municipalities and Water Trusts on moneys lent for the construction of waterworks, it being usually arranged not only that the interest should be paid annually, but that a further amount, generally equal to about 2 per cent. upon the sum advanced, should be lodged each year to the credit of a sinking fund, in order that the debt might be eventually extinguished. During the year 1890-91, the advances on account of rabbit-proof fencing were reduced by £14,154, but the arrears of interest on Waterworks loans increased by £12,740. following are the particulars of the outstanding balances referred to:—

^{*} During and after this year, four-fifths of the wharfage rates for the Port of Melbourne, which had previously formed part of the Customs revenue, were transferred to the Harbour Trust.

† Duty on spirits increased on the 17th July, 1884.

§ Tariff amended in 1889-90.

† Duty on spirits increased on the 17th July, 1884. § Tariff amended in 1889-90. ‡ Beer and tobacco duties imposed on the 1st November, 1880, but the former subsequently expired by effluxion of time on the 31st August, 1882. Duty on spirits increased on the 17th July, 1884.

Increase in 1877-8, due to a proportion, then amounting to £4,600, of publicans' licence fees, etc., being received, for the first time, under Act 40 Vict. No. 566, section 111. Decrease in 1886-7 due to such proportion, then amounting to about £16,450, being diverted into a Trust Fund, as directed by the *Licensing Act* 1885.

^{*} For six months only.

[†] The duties were imposed on the 18th December, 1879, and consequently the amount received in 1879-80 was for only  $6\frac{1}{2}$  months. Since 1st January, 1884, the revenue therefrom has been estimated. See footnote (||) on page 177 ante. For particulars of the duties levied, see paragraph 363 post.

‡ The amount of land tax payable annually varied in the years named from £126,000 to £124,000. The fluctuations in the revenue above and below this limit were due to the irregular payment of the tax. Further particulars are given in paragraph 351 et seq. post.

Heads of expenditure, 1890-91.

286. Of the total ordinary expenditure of Victoria in 1890-91, 1889-90 and £1,353,000—or 15 per cent.—was disbursed to defray the cost of

^{*} Including "Immigration deposits," £23,074, and accumulation of Pension Fund transferred to revenue, £14,500, in 1874-5; fire insurance on Government Printing Office, £12,000, in 1882-3; unexpended balances from Centennial Exhibition repaid, £12,000, and repayments to credit of appropriations, £20,620, in 1889-90; and repayments to credit of appropriations, £20,784, and repayment of loans to municipal councils for rabbit-proof fencing, £13,901, in 1890-91.

[†] Not including £500,000 raised by means of Treasury Bonds.

[‡] Including £60,000 expended in the previous year with a view of being recouped from loans, but ultimately charged in 1889-90 to the consolidated revenue.

[§] Including—besides the revenue proper and recoups—a special receipt of £140,000 derived from the sale of the Melbourne Police Court, and not mentioned in the previous columns.

Government, maintenance of law and order, and provision against foreign attack; £868,000, excluding £76,000 for buildings—or  $9\frac{1}{2}$  per cent.—was contributed towards public instruction and the advancement and dissemination of knowledge; £303,000—or nearly  $3\frac{1}{3}$  per cent.—was expended on public charities or devoted to the preservation of the public health; £100,000—or 1 per cent.—was expended on the management and survey of the Crown Lands, or about £37,000 less than the gross annual rental therefrom during the same financial year; as much as £4,802,000—or 53 per cent. was absorbed in carrying on the various commercial undertakings of the Government, viz., £2,530,000 on Railways and Waterworks, besides £1,529,000* in interest upon loans raised for their construction, and £743,000 on Post and Telegraphs; £118,000 was paid as interest on amounts borrowed for the construction of other public works; £86,000 was the cost of collecting the revenue from Customs duties and Excise, whilst £38,000 was spent on the maintenance of Ports and Harbours; and £252,000—or 3 per cent.—was granted in aid of the agricultural and mining industries. The amounts just enumerated, together with £131,000 expended on miscellaneous services, form the ordinary expenditure for the year; but, besides this, an amount of £1,070,900—or nearly  $11\frac{2}{3}$  per cent. of the total expenditure—was spent on the construction of various public works of a permanent character, viz., £107,400 on Railways, £76,000 on State school buildings, and £887,500 on "Miscellaneous Public Works," which embraces the cost of erection and of maintenance of public offices and buildings of all kinds, expenditure on roads and bridges, and municipal subsidies (£450,000). These amounts might be considered as a set-off against the proceeds of land sales, before referred to,‡ which they even exceeded by £594,000. In 1890-91 there were also certain items of special expenditure, amounting to £181,600 (in addition to £230,203 in the two previous years) for the erection of certain public buildings and the improvement of Crown lands, to be

^{*} The total payment for interest and expenses of the public debt was £1,647,000, but the amount here given is that paid for Railways and Waterworks only.

[†] This is not strictly true, as there are many items included under the various heads which will not recur in subsequent years.

[‡] See paragraph 279 ante.

recouped from the proceeds of the sale of Crown lands by auction. The following is a classification of the expenditure* under 10 divisions and 27 subsidiary heads, during the years 1889-90 and 1890-91, also the increase or decrease in the latter year:—

Note.—For particulars of Expenditure in 1891-2 see Appendices at the end of this volume.

^{*} For further details, see table following paragraph 291 post.

[†] The figures in this line do not represent the actual working expenses, but only the amounts charged to each year under the Annual Appropriation Acts. The actual amount of working expenses, as shown in the Railway Commissioners' Annual Reports, was £2,132,158 in 1889-90, and £2,310,645 in 1890-91. See also figures on page  $200 \ post$ .

[†] The cost of erecting and repairing Government Offices, and making and repairing furniture therefor, is not charged to the respective departments, but is placed under this head, which also embraces the cost of all Public Works, except Railways, Waterworks, and Telegraph lines, and works provided for out of loans; it also includes expenditure on Roads and Bridges, and the annual subsidy of £450,000 to Municipalities. For details, see page 201 post.

[§] Net figures. || Including interest on Post Office Savings Banks deposits.

[¶] Commission on redemption of £850,000 Debentures at ½ per cent.

*** Although the annual subsidy to the Mint is £20,000, portion of that sum has been repaid each year to the revenue. See table following paragraph 279 ante, under the head "Mint subsidy returned."

^{††} Including £149,984 in 1889-90 for advances to shires for the erection of rabbit-proof fencing; and £18,481 towards expenses of census of 1891; £14,101 for Premier Permanent Building Society prosecutions; and £22,486 for preservation of order in Melbourne.

Chief items 91 compared.

287. From this table it may be ascertained that a total increase of expenditure, 1889- in the ordinary expenditure, amounting to £284,034, took place under 90 and 1890fifteen heads, but a decrease of £801,072 under the other twelve heads, resulting in a net decrease of about £517,000. On the one hand the most prominent increases were £98,700 in the interest on the public debt, owing to the increasing amounts borrowed for the construction of Railways and Water Works; £39,600 under public instruction of which £25,000 was due to increased cost of State (primary) Education, and £15,000 to additional or special grants to the University, Technological Schools, and Mechanics' Institutes, etc.; £33,300 under Post and Telegraphs—of which £25,000 was increased cost of administration, making a total increase of about £80,000 in the last two years; £32,500 under Agriculture—of which State forests account for £6,000, and bonuses for agricultural products for £27,000; £31,600 under retiring allowances, gratuities, compensation, etc. of which, however, £15,000 being on account of gratuities, etc., does not add to the annual charge—owing chiefly to the retirement of sexagenarians; £19,000 under Police, of which about £6,000 was owing to expenses connected with precautions taken to maintain order during the occurrence of the labour strikes in Melbourne; and £18,800 in the amount paid to the Railway Construction Account, which is dependent on the sale of land by auction. In regard to the agricultural bonuses referred to, the total amount already appropriated to that object was £233,000, of which only £41,600 has yet been paid, the balance being payable from time to time in accordance with regulations approved by the Governor in Council. On the other hand, there was a large decrease of £140,500 under miscellaneous Public Works, partly made up of subsidiary decreases as follow:— Government House, £9,000; Court houses, £10,500; Police buildings, £8,000; Lunatic Asylums, £11,400; raising and draining low-lying lands, etc., £6,000; purchase of land near General Post Office, £17,000; Country Post Offices, £10,000; and Roads and Bridges, £72,000; also £55,800 under defences, notwithstanding an additional vote of £26,500 to augment the special appropriation of £145,000, the amount spent on Defence Works and buildings (including torpedo boats) alone being less by £95,000; £48,500 under Railways; £16,000 under Mining—of which nearly £12,000 was in the prospecting vote; £13,000 under Charitable Institutions—of which £10,000 was a non-recurring grant in aid of increased hospital accommodation in the metropolis, £6,800 under the Inebriate Asylum (recently built); and of £111,200 in miscellaneous services, resulting chiefly from an exceptional and non-recurring item of £150,000 (advances to be recouped) appearing

working of

only in the accounts for 1889-90, and three similar items -£18,500 for the census, £14,100 on account of Premier Permanent prosecutions, and £22,500 to provide for maintenance of order during the strikes, appearing only in the accounts of 1890-91. Moreover, the following decreases appeared in items usually provided for out of loans:-State school buildings, £131,200; redemption of loans, £274,000.

288. It has already been stated that nearly half the total expendi- Loss on ture is in connexion with the working of the Railways, Waterworks, and Post and Telegraphs; but the most important of these is the Railways. As the Treasurer's account of these for the last two years is to some extent complicated by arrears being included with a view of placing the account on a sound footing for the future, a better idea of their financial condition will more readily be obtained from the accounts of the Railway Department,* which, being compiled at a later date, are believed to be complete for each year. From these it appears that the working expenses increased from £2,132,158 in 1889-90 to £2,310,645 in 1890-91, or by £178,487; so that there was really no falling-off as would appear from the figures given in the last table. By the same accounts, the net earnings fell off from £999,708 to £987,922 in the two years respectively. And if the differences be taken between these amounts and those given in the last table, as showing the interest paid on account of Railway loans, the results will show that the loss to the State on account of Railways increased from £203,667 in 1889-90 to £291,273 in 1890-91, as will be seen by the following figures †:-

RAILWAYS.—NET EARNINGS AND INTEREST COMPARED.

Net earnings Interest, etc., paid on Railway loans†		1889-90. £ $999,708$ $1,203,375$	1890-91. £ $987,922$ $1,279,195$
Apparent loss	•••	203,667	291,273

289. The next most important commercial undertakings are the Loss on Postal and Telegraph services, which it has been the policy of the working of Postal and Government to work, although at an immediate loss. According to figures already given, the expenditure set down to these services in 1890-91 was £742,666, whilst the actual receipts amounted to only £499,327, there thus being an apparent deficiency in that year of £243,339, as compared with £183,000 in 1889-90, and only £66,000 in 1888-9, prior to the introduction of the penny inland postage on the

Telegraph Department.

^{*} See last issue of this work, Vol. II., pages 473 and 475.

[†] It should be pointed out that portion of the loans on which interest was paid was for lines not open for traffic, which consequently were not in a position to earn revenue. No allowance is here made for interest on capital derived from the general revenue.

1st January, 1890. It should also be pointed out that the reduction of postage to the United Kingdom on the 1st January, 1891, from 6d. and 4d. by two different routes to a uniform charge of  $2\frac{1}{2}$ d.* must also have helped, to some extent, in increasing the deficit in 1890-91. In order, however, to ascertain the true deficiency, it will be necessary to add to the receipts an allowance for services rendered to the State free of cost, i.e., in transmission of correspondence and telegrams, and to eliminate from the expenditure as far as possible all amounts which do not form part of the working expenses, such as expenditure on capital account (which, however, it is in some cases impossible to separate); also interest on Savings Banks deposits, which are invested by the Government for other than Postal purposes, whilst, on the other hand, all sums charged to other departments on account of ordinary Postal business should be included. A statement made upon this principle shows that whereas in 1888-9 there was a real surplus of about £48,000, in 1889-90 there was an actual deficiency of about £59,500, and in 1890-91 of £109,000. The comparatively large deficit in 1890-91 was due not so much to the loss of revenue occasioned by the reduction of postage,† already referred to, as to the increased cost of post and telegraph services generally. Thus the net falling-off in the combined Postal and Telegraph revenues in 1890-91, as compared with 1888-9 (including estimated value of official correspondence), was only £54,000; but, on the other hand, the cost of general administration increased by £80,000; the cost of Inland and Foreign mails increased by £22,000; expenditure on Telegraphs and Telephones by £1,500. These results are shown in the following table:—

NET ANNUAL COST OF POSTAL AND TELEGRAPH DEPARTMENT, 1888-9 то 1890-91.

^{*} The total amount permanently appropriated under Act 53 Vict., No. 1046, to these objects during the last two years was £233,000, of which £142,000 was to be distributed as bonuses under regulations of the Governor-in-Council; £10,000 for importation of new varieties of seeds and plants; £43,000 for establishing a system of technical education, by the employment of experts to supply instruction in connexion with the introduction of new vegetable products, and the improvement of existing agricultural methods; £12,000 for publishing agricultural reports in connexion with the educational work of the experts, etc.; and £15,000 bonuses for the encouragement of planting and cultivating forest trees of an economical character. Of the £142,000 to be paid as bonuses, £75,000 was set apart for growers of grapes, fruits, and general vegetable products; £37,000 for factories for fruit canning and drying, dairying, raisin and currant making, vegetable oil making, preparing hemp, flax, silk, etc., for the manufacturer; and £30,000 for dairy produce and fruits of best quality and in best order. Of the £233,000 appropriated, only £41,569 has been expended to the 30th June, 1891, as will be seen from the above figures.

^{*} Including £38 each in 1889-90 and 1890-91 towards expenses of International Bureau at Berne.

§ Including allowance of £100 for distribution of awards at the Paris and New Zealand

Exhibitions.

[†] Including costs (final) In re Merry v. The Queen, £5,000 in 1889-90, and £1,000 in 1890-91.

† The total expenditure on the Melbourne Centennial Exhibition was £286,238. According to the final balance sheet of the Executive Commissioners, the net cost of the Exhibition—after allowing for £21,788 cash repaid, and £15,509 (cost price) for permanent improvements—was £239,702. The cost of restoration of grounds and buildings, which is not taken into account was £7,694.

^{*} Including vote to augment special appropriation, viz., £21,278 in 1887-8, £23,958 in 1888-9, and £26,486 in 1890-91.

t For particulars of the items included under these heads, see footnotes to table following paragraph 291 ante.

[‡] The amount expended on school buildings in the years intervening between those named was entirely paid out of loans.—See table following paragraph 297 post. The cost of erection of a Training College for Teachers is included, viz, £8,000 in 1888-9, £6,455 in 1889-90, and £12,883 in 1890-91.

^{*} This and the following amounts, except £34,227 in 1890-91, represent rates paid on unoccupied Mallee Blocks towards extermination of vermin. The sum of £34,227 referred to is the second payment—£7,342 having been paid out of votes in the previous year—out of an amount of £233,000 which has been specially appropriated to promote the Agricultural, Dairying, and Fruit Industries. See footnote on page 199, ante.

† Including amounts advanced to mining companies to assist in the development of the mining industry, etc., viz., £1,500 in 1875-6; £250 in 1877-8; £18,800 in 1878-9; and £500 in 1879-80. Only £1,237 in all has been repaid, leaving a balance of £19,813, of which £15,813 has been written off as unrecoverable.

[†] The amounts annually entered under the head of Special Appropriations in 1885-6 and subsequent years, with the exception of £6,000 annually for salaries of the Railways Commissioners, were paid into the "Railway Construction Account" in accordance with the direction of The Land Act 1884 (48 Vict. No. 812), sec. 78, whereby it was provided that all moneys arising from the sale by auction of Crown lands should be placed to a trust account, the amount standing to the credit of which should be available for the construction of railways. amounts entered prior to 1882-3 also represent the payment of moneys derived from the alienation of Crown lands, but fixed at £200,000 per annum, to a similar account (known as the "Railway Loan Liquidation and Construction Account"), which was created under The Land Act 1869 (33 Vict. No. 366)—full particulars of which are given in the Victorian Year-Book. 1885-6, page 123. There was also a sum of £25,000—not included in the ordinary revenue—received in 1890-91 from the Melbourne Harbor Trust on exchange of land previously occupied by the Railway Department, and paid into the Railway Loan Liquidation and Construction Account under the authority of Act 54 Vict. No. 1182. The total amount paid into both these accounts up to the 30th June, 1891, was £2,803,740, which has been expended on the survey and construction of lines of railway. By an Act passed 1891 (55 Vict. No. 1213) the proceeds of land sold by auction are temporarily diverted from the 1st July, 1891, into the Land Sales by Auction Fund until the moneys so paid in shall amount to £1,084,750. See paragraph 295 post. The amounts entered under the head of "Votes" represent the working expenses of railways, except £500 in 1886-7, and £4,144 in 1887-8 paid towards construction.

† Exclusive of school buildings and of all public works paid for out of loans, but including endowments of municipalities under the Local Government Act. The expenditure on the Port of Melbourne, included under this head prior to 1st January, 1877, has since been paid out of the Harbour Trust Fund, particulars of which are given later on. The figures for 1888-9 and 1889-90 have been slightly altered since last publication, owing to the transfer of a certain item to State School Buildings

School Buildings.

† The provision of the Local Government Act 1874, authorizing the annual subsidy of £310,000 to municipalities lapsed on the 31st December, 1879, but amounts equivalent to the subsidy have since been voted by Parliament. This accounts for the gradual transfer of this item of expenditure

from Special Appropriations to Votes. The subsidy was increased to £340,854 in 1888-9, and to £450,000 from 1889-90.

^{*} See footnote (†) on page 211.

[†] See footnote (‡) on page 211.

[‡] In the year 1885-6, a change was made in the method of keeping the accounts of postal communication with Great Britain. Prior to that year the gross charge, but subsequently the net charge only, was entered. From the gross expenditure for 1885-6 were deducted not only the amount due by other Governments on account of that year, but also the arrears received for 1884-5 and previous years. Hence the small apparent expenditure from Special Appropriations set down against that year.

[§] Under this head the amounts paid out of Special Appropriations represent the net expenditure on account of Steam Postal Communication (including gratuities to masters of vessels), interest on Savings Bank deposits, and a subsidy for maintenance of the cable from Port Darwin to Penang.

The expenditure under the head of Votes represents interest and expenses in connexion with the late Melbourne and Hobson's Bay Railway Company's debentures, which are being gradually paid off and replaced by Government debentures.

Increased expenditure under special appropriations.

293. Of the total expenditure proper in 1890-91, over £2,333,000, or nearly 25 per cent., was under the head of Special Appropriations, which being permanently provided for under various Acts of Parliament other than the annual Appropriation Act, are not required to be voted annually. It will be observed that the expenditure under such appropriations decreased in 1890-91 as compared with the previous year by over £116,000, and that under Votes by about £272,000. The former resulted from a decrease of £276,100 under Repayment of Loans—no loans having been paid off in 1890-91, and a decrease of £8,200 under Charitable Institutions on account of the purchase of certain lands and buildings for an Inebriate Asylum; as against which there was an increase of £101,000 under the head of Interest consequent on the growth of the public debt, of £34,200 under the head of Agriculture on account of bonuses for various products, of £21,200 under that of Pensions, Gratuities, etc., and of £11,000 in the amount paid into the Railway Construction account consequent on the larger amount derived from the sale of Crown lands at auction.

Large increase of expenditure in recent years.

294. From the figures in the last table, it will be seen that a large growth of the ordinary expenditure has taken place since 1886-7, for in that and the preceding year the expenditure stood uniformly at about  $6\frac{1}{2}$  millions sterling, whilst the annual increase up to that time had never exceeded half-a-million; yet, in the four subsequent years,

^{*} Not including £471,900 in 1881-2, £18,000 in 1882 3, and £10,100 in 1883-4, towards the redemption of Treasury bonds.

it increased to over 9 millions, or by about £2,567,000. The ordinary revenue, on the other hand, increased during the same period by about £1,610,000, and thus the growth of the expenditure exceeded that of the revenue by £957,000; with the result that whereas in 1886-7 there was a surplus of revenue on the year's transactions of £172,600, there was in 1890-91 a deficiency of £785,100, as already shown.* Over four-fifths of the increased expenditure, or £2,080,200, was confined to 5 branches, viz., £1,139,000 under Railways—the length open for traffic having increased by 860 miles, or by 48 per cent.; £378,000 being Interest on fresh loans contracted chiefly for railway construction; £215,500 under Miscellaneous Public Works, of which £140,000 was an addition to the municipal subsidy; £191,000 under Public Instruction, etc., of which £150,000 was, increased cost of State education, and £31,000 was an addition to the grant to Technological Schools; and £156,700 under Post and Telegraphs. The following is a summary of the increases under the principal heads, distinguishing those under Special Appropriations from those under Votes:—

† New Guinea contribution 1886-7 not paid.

\$ Including agricultural bonuses, etc. (£34,227).

Special expenditure.

295. Besides the ordinary expenditure on public works, certain other sums were also expended during the last three years with a view, in the first instance, of being finally charged, not to the consolidated revenue as usual, but to a special fund—specifically created for the purpose—to be derived from the sale of certain public lands and buildings in Melbourne, and therefore distinguished in this work as "Special Expenditure." It was, however, subsequently decided by an Act (55 Vict. No. 1213) to provide for such expenditure (with the exception of £140,000 to be recouped from the proceeds of the sale of the Melbourne Police Court) out of a Fund called the Land Sales by Auction Fund, into which are to be paid all moneys arising from the sale of land by auction, which are thereby diverted from the Railway Construction Account,* until the sum of £1,084,750 the amount authorized for expenditure—has been paid in. special expenditure was authorized for the purchase of land for law courts and offices, the erection of public buildings, and reclamation and drainage works. The amount spent in 1890-91 was £225,804 as compared with £190,779 in the previous year; and the total amount expended up to the 30th June, 1891, was £457,007, of which £108,905 was defrayed from part of the proceeds of the sale of the City Police Court (which realized £140,000), leaving a balance outstanding of £348,102 to be paid out of the Land Sales by Auction Fund. The following are the particulars:—

296. The amounts specially appropriated under Acts of Parliament New special increased by £328,577 (net) during the last eight years. Two new tions. items were added in 1890-91, increasing the annual expenditure by at least £36,800 per annum. Of this amount, £34,200 was the expenditure during the year out of an amount authorized for agricultural and other industrial bonuses, etc., and at this rate of expenditure it will take nearly five more years to exhaust the appropriation. following is a statement of the new appropriations referred to:-

^{*} Including amounts repaid into the consolidated revenue for expenditure in 1888-9, viz.:-£4,000 on Moe swamp works, and £5,934 on Elwood swamp works.

^{· †} To be partly recouped by payments by Harbor Trust and by Port Melbourne Council.

		Net increase in eight years	328,577

Note.—Besides the amounts specified in the table, a grant of £3,000 was authorized and paid in 1885-6 to the widow of the late Hon. J. M. Grant, and £4,000 in 1887-8 for the purchase of an annuity for the Hon. P. Lalor, who has since died.

^{*} Previously paid from annual votes. Of the £20,000 authorized for the maintenance of the Port Darwin cable, only about £14,000 to £14,600 has usually been required, and recently it was as low as £10,400.

[†] This amount, which was authorized for five years only, duly lapsed by effluxion of time, and was replaced in 1889-90 by a fresh appropriation of £145,000.

[‡] This represents the mean of the amounts paid in the two years, 1885-6 and 1886-7.

[§] This is to replace the appropriation of £110,000 of 1883-4, which has lapsed by effluxion of time. This amount was authorized up to the 31st December, 1891.

^{||} Expenditure during year out of a total appropriation of £225,659.

297. In addition to the ordinary expenditure from revenue, large Expenditure sums are annually disbursed for various purposes from amounts of loans, etc. raised by means of loans. The following table shows the details of such expenditure prior to 1885-6, and during each subsequent year. This is intended to supplement the table of ordinary expenditure by exhibiting those items which, having never been, or having ceased to be, a charge on the general revenue, are treated in separate accounts:-

EXPENDITURE OF NET PROCEEDS OF LOANS TO 30TH JUNE, 1891.

Note-The figures in this table have been obtained direct from the various Government departments so as to show the actual expenditure during each year, and differ from those given in the Treasurer's Finance Statements, in consequence of an overlapping of the accounts and other causes. The expenditure from loans paid off has not been deducted.

298. Over a tenth of the expenditure payable from the General Annual Revenue consists of subsidies, grants, endowments, etc. The whole grants, etc. amount paid in 1890-91 in this manner was over £928,000, of which nearly half was paid to municipalities, over an eighth to charitable institutions, and nearly a ninth in aid of the mining industry. does not include the annual grant for free public instruction, which amounted to about £736,000; or for the maintenance of the Government charitable institutions—such as the hospitals for the insane, the industrial and reformatory schools, and inebriate asylum-which

^{*} These are the actual payments during the various years shown, whether made direct from the loans, etc., or indirectly by means of advances from the general revenue—to be subsequently recouped.

[†] For further particulars, see Waterworks in Part "Production," in the second volume.

[‡] Works recently handed over to the Melbourne and Metropolitan Board of Works.

[§] Net charge after deducting contributions by the Melbourne City Council, amounting to £47,000, and by the Melbourne Tramways Trust, amounting to £2,034.

[|] Including £58,618 expenditure on works for opening the sea entrance to the Gippsland

amounted to nearly £161,000. The following is a statement of the amounts paid in 1890-91 under the various heads:—

Expenditure on public instruction. 299. The system of free public instruction, which was legalized under Act 36 Vict. No. 447, came into force on the 1st January, 1873, and since that date over twelve millions sterling have been expended

^{*} A set-off against this amount appears in the account of Postal Revenue, under the head of "Postages Collected," etc., which reduces the ultimate net cost considerably.
† Including £882 refund of duty paid by the Company.

by the State in giving effect to its provisions. Of this amount more than a sixth was for the erection, maintenance, and rent of school buildings; and the remainder—viz., nearly ten millions—represents the cost of education, including that of office staff, inspection, instruction, pensions, gratuities, and contingencies, for the last nineteen years. The following table shows the expenditure under those heads for each year from 1872-3 to 1890-91, also the total for the period:—

Expenditure on Public Instruction,* 1872-3 to 1890-91.

Note.—Besides the amounts in this table, subsidies are voted each year to the University, Schools of Mines, Schools of Design, etc. For particulars, see page 198 ante.

300. It will be observed that the actual cost of instruction Cost of increased rapidly until 1878-9; that during the seven years, 1878-9 to 1884-5, it remained tolerably uniform at £520,000 per annum, but during the last six years it has increased by £176,000. During the ten years ended with 1887-8, the annual expenditure on school buildings had, with one exception, been below £100,000, but in each

system at different periods.

‡ Amended since last publication.

^{*} Further details for the last two years are given in Part "Social Condition," published in the second volume.

[†] Including expenditure from loans; also £27,338 expended in the last three years on the Teachers' Training Institute.

of the last three years it exceeded that amount, especially in 1889-90, when it was much larger than in any previous year except 1877-8. It may be remarked that prior to 1872-3 the total annual expenditure on public instruction was under £200,000.

Expenditure on immigration.

301. Since the separation of Victoria from New South Wales, upwards of two millions sterling have been expended on the introduction of immigrants from the United Kingdom. Of late years, however, it has not been the policy of the State to devote money to this object, and little or nothing was so spent during the last seven, and only £65 during the last ten years.*

Expenditure on immigration in Australasian colonies. 302. In 1890 the only Australasian colony which continued to expend large sums on the introduction of immigrants was Queensland, but even that colony spent £46,000 less in 1890 than in the previous year. Nearly £86,300 were spent by the colonies on immigration in 1890, of which Queensland contributed nine-tenths. Only £15,453, or 18 per cent., of the whole, was provided for out of ordinary revenue, the greater portion having been paid out of the loan account.† In proportion to population, the expenditure was much the highest in Queensland, where it averaged 4s. per head, the average for the whole of Australasia being only 6d. per head. The following are the total amounts, and the amounts per head, expended on immigration in each colony in 1889 and 1890:—

Expenditure on Immigration in the Australasian Colonies, 1889 and 1890.‡

			E	xpenditure on 1	Immigration.

^{*} For expenditure in each year since 1850, see last edition of this work, Vol. I., paragraph 131.

[†] See tables following paragraphs 321 and 324 post.

[‡] For numbers of assisted immigrants in the various colonies for a series of years, see last edition of this work, Vol. II., page 484.

303. During the twenty years* ended with 1890 the subjoined Expenditure amounts were spent on immigration in the following colonies:-Victoria, £80,049; New South Wales, £774,784; South Australia, £776,873; New Zealand, £2,186,424.

gration in Australcolonies, 1371-90.

304. During the last forty-one years nearly seventy-one millions Expenditure sterling have been expended—partly out of loans and partly out of works. the general revenue—by the Government of Victoria on public works, including railways, roads and bridges, water supply, and other works and buildings. Of this amount nearly four millions were spent in 1890-91. The whole is inclusive of loans to local bodies and water trusts for the construction of waterworks, but exclusive of the sums expended by the former on public works, roads, etc., and on the Port of Melbourne† since the 1st January, 1877. The following table gives the amount expended by the State prior to and during 1890-91:—

#### GOVERNMENT EXPENDITURE ON PUBLIC WORKS.

Note.—In 1891-92, the approximate revenue of Victoria was £7,728,828, and the approximate expenditure £8,639,900. For the revenue and expenditure of each of the neighbouring colonies during 1891, see Appendix A., at the end of the second volume.

306. It should be pointed out that the Victorian returns of revenue victorian and expenditure are prepared on a somewhat different principle from those of New South Wales, the over-payments to the revenue, afterwards refunded, being in the Victorian statements deducted therefrom, and the net amounts only dealt with. In New South Wales, on the other hand, the refunds are not deducted from the revenue, but are placed under the head of expenditure, both revenue and expenditure being swelled thereby. It is not possible from the official statements of public accounts in New South Wales to ascertain the full extent to which this expansion of both sides of the account occurs; but by a superficial analysis of the accounts of the year 1890, sums can be readily traced amounting in the aggregate to at least £195,283,* which are

statements differ from those of New South Wales.

^{*} Such items are as follow: £20,686 repayments to credit of votes; £31,918 drawbacks and refunds of duty; £10,193 railway revenue collected for the Victorian Government, etc.; about £132,486 other revenue returned, etc., etc.

included in and go to swell both the revenue and expenditure of that colony, whereas they would not be so included in Victoria, and this cannot be the full extent to which such differences occur. It is not known whether a similar system of cross-entry prevails in the other Australasian colonies, but it is probable such entries are not so rigidly excluded in any of the other colonies, except perhaps New Zealand, as they are in Victoria.

Revenue and expenditure compared.

307. In the last year named in the table the revenue exceeded the expenditure in all the colonies except Victoria, Queensland, and South Australia, although in the previous year there were deficiencies in all the colonies, except New Zealand. In New South Wales, the surplus in 1890 amounted to £95,000, in Western Australia to nearly £13,000, in Tasmania to £35,000, and in New Zealand to £126,000; but, on the other hand, there were exceptionally large deficiencies of £785,000 and £485,000 in Victoria and Queensland respectively, and one of £21,000 in South Australia, which resulted in a net deficiency in the colonies as a whole of £1,022,000 as against a net deficiency in 1889 of £1,550,000, but a net surplus in 1888 of £1,126,000. During the last ten years referred to in the table there has been a surplus six times in Victoria, five times in New South Wales, Western Australia, and New Zealand, four times in Queensland and Tasmania, and twice in South Australia.

Revenue and expenditure in colonies, 1890 and former years.

308. In the last year named in the table a larger revenue than in any previous year was raised in all the colonies, except Victoria and Queensland; and a larger expenditure in all but Victoria, Western Australia and New Zealand.

Revenue and expenditure per head in colonies.

309. South Australia and Tasmania were the only colonies in which the revenue and expenditure per head was as large in the last year as in any of the previous years named.

Order of colonies in respect to revenue and expenditure.

310. Although, as has been already stated,* the returns of Victoria and New South Wales are not strictly comparable, there can be no doubt that in all the years shown in the table the revenue and expenditure of New South Wales, in consequence of the large amount derived from Crown lands, exceeded that of Victoria. In both these respects the position of the two colonies named was much above that of all the others of the group. The following is the order in which the respective colonies stood in regard to the total amount they raised and expended in the last year named:—

^{*} See paragraph 306 ante.

## ORDER OF COLONIES IN REFERENCE TO REVENUE AND Expenditure, 1890.

- 1. New South Wales.
- 2. Victoria.
- 3. New Zealand.
- 4. Queensland.

- 5. South Australia.
- 6. Tasmania.
- 7. Western Australia.

311. In regard to revenue per head, Victoria occupied a higher order of position in 1890 than Tasmania or New Zealand, but a lower one respect to than any of the other colonies. Western Australia, New South etc., per Wales, and Queensland had the largest revenues per head; and these colonies also stood first, but in reverse order, in regard to expenditure per head. The following is the order in which the colonies stood in these respects:—

#### ORDER OF COLONIES IN REFERENCE TO AMOUNTS OF REVENUE AND EXPENDITURE PER HEAD, 1890.

Revenue per head.

- 1. Western Australia.
- 2. New South Wales.
- 3. Queensland.
- 4. South Australia.
- 5. Victoria.
- 6. New Zealand.
- 7. Tasmania.

Expenditure per head.

- 1. Queensland.
- 2. New South Wales.
- 3. Western Australia.
- 4. South Australia.
- 5. Victoria.
- 6. New Zealand.
- 7. Tasmania.

312. Adding together the amounts of revenue and likewise the Revenue amounts of expenditure for 1890,* it will be found that on the continent of Australia the former amounted to  $24\frac{1}{4}$  millions and the latter to over  $25\frac{3}{4}$  millons; also that the aggregate revenue of Australia, with the addition of that of Tasmania and New Zealand, amounted to nearly  $29\frac{1}{4}$  millions, and the aggregate expenditure to over  $30\frac{1}{2}$  millions sterling. In Continental Australia there was a deficiency on the year's transactions of a million and a half, and in the Australasian colonies as a whole of one million and a third. The following are the exact amounts of revenue and expenditure, also the proportions per head of population:—

and expenditure of Australia and Australasia.

REVENUE AND EXPENDITURE OF AUSTRALIA AND Australasia, 1890.

^{*} In the case of Victoria, the figures for 1889-90 have been taken.

Increased revenue of Australasia in seventeen years. 313. A comparison of the aggregate revenue of the colonies upon the Australian continent in 1873 and 1890 shows that, in the seventeen years, it had risen from £9,161,000 to £24,250,000, the increase being over 15 millions sterling, or 165 per cent. If the revenues of Tasmania and New Zealand be added, the sum shows an aggregate revenue for the whole of Australasia of £12,262,000 at the former and of £29,216,000 at the latter period, the increase being nearly 17 millions, or 138 per cent. In the same seventeen years the mean population of the Australian continent increased from 1,671,051 to 2,970,520, or by 78 per cent., and the population of the whole of Australasia increased from 2,062,375 to 3,735,034, or by 81 per cent.

Heads of revenue of Australasian colonies. 314. The following is a comparative statement of the amounts received, under various heads of revenue, in the respective Australasian colonies during the most recent year for which the particulars are available. The figures have all been derived from official sources:—

HEADS OF REVENUE IN AUSTRALASIAN COLONIES, 1890.

Heads of Revenue.		Victoria, 1890-91.	New South Wales.	Queens- land.	South Australia.	Western Aus- tralia.	Tas- mania.	New Zealand.

Total	100.00	100.00	100.00	100.00	100.00	100.00	100.00		

Note. —The figures of revenue and expenditure for Victoria are for the twelve months ended 30th June, 1891, but those for the other colonies are for the calendar year 1890. Refunds of revenue, drawbacks, and such similar entries, are rigidly excluded from the accounts of revenue and expenditure of Victoria and New Zealand, but are included in those of New South Wales and Queensland; also, it is believed, in those of some of the other colonies. For later information see Appendix A. at end of the second volume.

315. It will be observed that the proportion of revenue raised by Proportion taxation—chiefly derived from Customs duties—varied from about 30 per cent. in New South Wales and South Australia to 60 per cent. in Tasmania, the proportion in Victoria being 39 per cent., or lower than in any other colonies except the two former. The revenue from Railways also formed a very large proportion of the total revenue of all the colonies, varying from about a ninth in Western Australia to about two-fifths of the whole in Victoria and South Australia. Crown lands revenue varied in the different colonies from 7 to 26 per cent. of the whole—the former proportion prevailing in Victoria and the latter in Western Australia; and that from Post and Telegraphs from 4 to 8 per cent.

of revenue from different sources.

316. It will be remarked that the land revenue was nearly four Heads of times as large in New South Wales as in Victoria, which item alone victoria much more than accounts for the larger total revenue of the former Indeed, if the land revenue be deducted from the total revenues of the two colonies, the revenue of Victoria, notwithstanding the cross entries in the New South Wales returns already alluded to, would exceed the revenue of that colony by £475,000, the respective amounts for 1890 being £7,730,000 and £7,255,000. It also appears that the railway revenue of Victoria exceeded that of New South Wales by about £300,000; in the former colony it forms nearly twofifths, and in New South Wales nearly one-third, of the total revenue.

and New compared. The total taxation of Victoria was greater than that of New South Wales by only half a million sterling, the excess appearing under the head of Customs. As to other heads, the revenue in New South Wales from Post and Telegraphs exceeded that in Victoria by £130,000, but in connexion with this it should be remembered that official correspondence and telegrams are charged for in the former, but travel free in the latter colony; and that the revenue from "Other Sources" was larger by over £200,000.

Land
revenue in
Australasian
colonies.

317. In 1890 the aggregate land revenue of the Australasian colonies amounted to nearly £4,200,000. The following table shows the receipts from the sale and occupation of Crown lands and their proportion to the total revenue in each Australasian colony during 1890. The colonies are arranged in order according to that proportion:—

Land Revenue in Australasian Colonies, 1890.

	Revenue de	Revenue derived from Crown Lands for—					
Colony.	Alienation in Fee-simple and Progressive Alienation.	Temporary Occupation and Miscellaneous.	Total.	Land Revenue to Total Revenue.			
,	£	£	£	Per cent.			
Western Australia	32,842	74,794	$107,\!636$	25.98			
New South Wales	1,275,658	967,381	2,243,039	23.62			
Queensland	190,735	386,133	576,868	17.69			
Tasmania	47,319	32,646	79,965	10.55			
South Australia	69,445	176,982	$246,\!427$	9.63			
New Zealand	154,584	176,372	330,956*	7.86			
Victoria (1890-91)	476,850	136,601	613,451	7:35			
Total	2,247,433	1,950,909	4,198,342	14.37			

Prospective diminution of land revenue in colonies.

318. It will be noticed that about a seventh of the aggregate revenues of the Australasian colonies in 1890 was derived from Crown lands; and that the proportion amounted to less than a twelfth in Victoria and New Zealand; about a tenth in South Australia and Tasmania; about a sixth in Queensland; and about a fourth in New South Wales and Western Australia. It will also be remarked that in the colonies, as a whole, more than half the land revenue was derived from alienation in fee-simple.

Land revenue in Australasia, 1878-1890.

319. In 1890, as compared with 1889, an increase of £105,500 occurred in the land revenue of New South Wales, of £72,000 in that

^{*} Inclusive of revenue from gold-fields, £17,616.

of South Australia, of £34,000 in that of Victoria, of £20,000 in that of Western Australia, of £11,000 in that of New Zealand, and of £9,000 in that of Tasmania; whilst, on the other hand, there was was a decrease of £72,000 in that of Queensland. Taking the colonies as a whole, there was a net increase in 1890 of over £180,000. Considerable fluctuations in the land revenue have taken place during the thirteen years ended with 1890, as shown in the following table, from which it will be seen that the amount received was larger than in any previous years named except 1878, 1881, 1882, 1887, and 1888; although the amount in proportion to the general revenue was much smaller in the last two than in any previous years, the proportion having fallen during the period from 33 to 14 per cent.:—

LAND REVENUE OF AUSTRALASIAN COLONIES, 1878 TO 1890.

·			Land R	evenue.

Note.—Uniform dates have not always been adhered to in furnishing the above information, which in some cases relates to the calendar and in others to the financial year.

320. Of the 29½ millions sterling which formed the total revenue of sources of the Australasian colonies in 1890, close upon 11½ millions—or nearly Australtwo-fifths—was raised by taxation, chiefly through the Customs; 91/4 millions—or something less than one-third—was derived from Railways; over 4 millions from Crown Lands; and not quite two millions from Post and Telegraphs. The following are the exact figures, also the amounts per head, distinguishing those relating to Continental Australia from those relating to the Australasian colonies taken as a whole:—

HEADS OF REVENUE IN AUSTRALIA AND AUSTRALASIA, 1890.

	Continent of	of Australia.	Australia with Tasmania and New Zealand.

Note.—For similar figures for 1891, see Appendix A. in the second volume.

Heads of expenditure colonies.

321. The following is a comparative statement of the amounts of Austral- expended under a few of the principal heads in the respective colonies during the most recent year for which the particulars are available:—

Heads of Expenditure in Australasian Colonies, 1890.*

Heads of Expenditure.	Victoria (1890-91).	New South Wales.	Queens- land.	South Australia.	Western Australia	Tas- mania.	New Zealand.
	£	£	£	£	£	£	£
Railways (working expenses)	2,462,582	2,037,168†	631,246	567,663	62,270	110,227	725,332
Post and Telegraphs	742,666	648,993	318,951	181,996	36,609	67,754	257,684
		1,895,656	1,139,035	753,289	57,614	223,652	1,640,289
Immigration		5,916	7,569	20	1,948		
Other services	4,276,567		1,648,416	1,076,290	)		1,458,261
Total	9,128,699	$9,403,562\P$	3,745,217	2,579,258	401,751	722,746	4,081,566

^{*} The figures for Victoria are for the year ended 30th June, 1891, those for the other colonies for the year ended 31st December, 1890. For later figures see Appendix A. in the second volume.

[†] Inclusive of Government tramways, £164,032.

[‡] Including expenses except in the case of Queensland. The debt was borrowed chiefly for the construction of Railways and other reproductive works.

[§] Exclusive of charges for the sinking fund (viz., £288,000) formerly charged to revenue, but now met by debentures raised for the purpose.

^{||} Further amounts on the introduction of immigrants were expended during the year out of loans, as follow:—South Australia, £70,049; New Zealand, £791. See Table VI. Victorian Year-Book, 1890-91, Vol. II., page 470.

[¶] See paragraph 306 ante, and footnote. Treasury Bills repaid, £150,000, are not included.

HEADS OF EXPENDITURE IN AUSTRALASIAN COLONIES, 1890*continued.

	Proportions per Cent.								
Heads of Expenditure.	Victoria (1890-91).	New South Wales.	Queens- land.	South Australia.	Western Australia	Tas- mania.	New Zealand.

Post and Tele- graphs	8.13	6.90	8.52	7.06	9.11	9.37	6:31		
Interest of Public Debt	18:04	20.16	30.41	29.20	14.34	30.95	40.19		
Immigration	• • •	.06	•20	•••	•49	•••	•••		
Other services	46.85	51.21	44.01	41.73	60.56	44.43	35.73		
Total	100.00	100.00	100.00	100.00	100.00	100.00	100.00		

322. It will be observed that the Railway expenditure was smaller Heads of exby about £433,000 in New South Wales than in Victoria, where it amounted to about  $2\frac{1}{2}$  millions sterling, or more than a fourth of the total expenditure, but the interest payable on the Public debt was larger by nearly £249,000 in the former than in the latter colony. New Zealand also, which had little more than one-half the revenue of Victoria, the interest on the Public debt was about the same as in Four of the colonies have now an annual charge for interest varying from  $1\frac{1}{8}$  to over  $1\frac{7}{8}$  million sterling. In Victoria the Postal and Telegraph expenditure is now £743,000, and in New South Wales close on £649,000. The expenditure on immigration should be considered in conjunction with the loan expenditure which took place during the year.+

323. It will also be noticed that about two-fifths of the total Proportion expenditure in Western Australia, nearly half in New South Wales, more than half in Victoria, Queensland, Tasmania, and South Australia, and nearly two-thirds in New Zealand, was devoted to the working of Railways and Post and Telegraphs, and the payment of interest on the Public debt-contracted for the construction of

of expenditure on various objects.

compared.

^{*} See footnote (*) on page 234.

[†] See footnote (||) on previous page, also table following paragraph 327 post.

railways and other public works. In Victoria, the Railway working expenses alone amounted to over one-fourth of the total, and the interest on the Public debt to over a sixth; the former being much higher than in any of the other colonies, but the latter lower than in any except Western Australia. In New Zealand as much as two-fifths, and in Tasmania, Queensland, and South Australia nearly a third, of the whole expenditure was for interest. The proportion expended on Postal and Telegraph services, it will be noticed, varied from less than  $6\frac{1}{3}$  per cent. in New Zealand, to 7 per cent. in New South Wales, and South Australia, to over 8 per cent. in Victoria and Queensland, and to over 9 per cent. in Western Australia and Tasmania.

Heads of expenditure in Australasia.

324. The following is a summary of the aggregate expenditure under the various heads referred to for Australia and Australasia:—

HEADS OF EXPENDITURE IN AUSTRALIA AND AUSTRALASIA, 1890.

**	Continent of	Australia.	Australia with Tasmania an New Zealand.		
Heads of Expenditure.	Amount.	Amount per cent.	Amount.	Amount per cent.	
	! ——— <u>£</u>		£		
Railways (working expenses)	5,809,453	22.54	6,645,012	21.73	
Post and Telegraphs	1,895,877	7.35	2,221,315	7.27	
Interest on Public Debt, etc	5,393,739	20.93	7,257,680	23.73	
Immigration *	15,453	.06	15,453	.05	
Other services	12,661,003	49.12	14,440,377	47.22	
Total	25,775,525	100.00	30,579,837	100.00	

Note.—The amounts in this table are summarized from statements of the amounts expended in the various colonies for the year ended 31st December, 1890; except in the case of Victoria, for which colony the amounts for the year ended 30th June, 1890, have been taken. Later figures are given in Appendix A. to the second volume.

Loan expenditure in Australasian colonies, 1890.

325. In addition to the expenditure of amounts derived from the General Revenue, as shown in the last two tables, all the colonies spend large sums of borrowed money, chiefly on railways and waterworks, but, also, in some instances, on the construction of electric telegraphs, harbour works and lighthouses, defence works, roads and bridges, school buildings, and other public works, and on immigration.

^{*} For further amounts expended from loans during the year, see table following paragraph 327 post.

The following table shows the total loan expenditure of the various colonies during 1890, also the amounts per head:-

EXPENDITURE FROM LOANS IN AUSTRALASIAN Colonies, 1890.

				Expenditure from	Loans during 1890.
C	colony.		-	Total Amount.	Amount per Head.
				£	£ s. d.
Victoria	• • •			<b>3,754</b> ,005	3 8 0
New South Wales	• • •	. • •		2,141,219*	1 18 10
Queensland	• • •			1,478,269	3 16 8
South Australia				$892,\!267$	2 16 5

	Total			8,281,666	2 16 0
Tasmania		• • •	•••	1,628,281	11 6 7
New Zealand		•••		398,817	0 12 10
	Grand T	l'otal		10,308,764	2 15 5

Note.—In this table the figures for Victoria and South Australia relate to the year ended 30th June, 1890, those for the other colonies to that ended 31st December. For later information, see Appendix A. to the second volume.

326. It will be observed that the aggregate loan expenditure of the Loan ex-Australasian colonies, in 1890, was over 10 millions sterling, of which of different Victoria spent 3\frac{3}{4} millions, New South Wales over 2 millions, and Tasmania and Queensland about  $1\frac{1}{2}$  millions each. It will be noticed, however, that the loan expenditure per head of population was less in Victoria than in Queensland or Tasmania—where it was exceptionally high—although greater than in any of the other colonies.

colonies compared.

327. Of the loan expenditure of the Australasian colonies during Heads of 1890, over two-thirds was spent in the construction of railways; penditure nearly one-eighth on waterworks;  $3\frac{1}{2}$  per cent. in connexion with and Ausharbours, rivers, etc.; over 3 per cent. on roads and bridges; over two-thirds of 1 per cent. on the introduction of immigrants; and the balance (about  $10\frac{2}{3}$  per cent.) for other services. The following are the total and proportionate amounts expended under each of these heads in Australia and Australasia respectively during 1890:—

in Australia

^{*} Exclusive of £718,000, loans paid off.

Note.—The revenue of the recently acquired Territory of British New Guinea in 1890-91 was £15,000, of which £2,674 was raised locally, and £12,326 was derived from contributions by certain of the Australasian colonies.

^{*} See footnote (*) on page 238.

† Exclusive of Provincial Revenues amounting to about £2,428,000, which, however, probably includes £813,500 from subsidies granted by the General Government.

‡ For the revenue of each Australasian colony, see table following paragraph 305 ante.

Aggregate revenue of British dominions.

329. It may be ascertained from this table that, out of 226 millions sterling, which represent the aggregate annual revenue of the British dominions, 90 per cent. is raised in the United Kingdom, India, and Australasia, the proportion contributed by each respectively being 39 per cent., 38 per cent., and 13 per cent.; moreover, 40 per cent. is raised in Europe, 39 per cent. in Asia, 3 per cent. in Africa, 5 per cent. in America, and 13 per cent. in Australasia.

Large revenues Australasian colonies.

330. The very large amount of revenue in proportion to population per head in raised in every one of the Australasian colonies, as compared with other British possessions, will be at once noticed.* It will, however, be remembered that these colonies possess an immense territory, scantily peopled, and that a considerable revenue is derived from the usufruct of the unsold lands, which is not generally the case elsewhere; also, that the revenues are swelled by the large sums which are received annually from the alienation of the Crown lands in fee-simple and from the working of the State railways.

Revenue per head in colonies and United Kingdom.

331. Besides the Australasian colonies, Gibraltar, Cape of Good Hope, Natal, and the Falkland Islands were the only British possessions which raised larger amounts per head than the United Kingdom.

Revenues of foreign countries.

332. The following table shows the actual or estimated revenues of the principal Foreign countries at recent dates, according to the best information obtainable. In most cases sums raised by means of loans and other extraordinary receipts have been eliminated. The calculations in the last column have been made in the office of the Government Statist, Melbourne:—

## REVENUES OF FOREIGN COUNTRIES.

				Revenue.			
Country.			Year.	Gross Amounts (000's omitted). Amo			
EUROPE.				£	$\pounds$ s. d.		
Austria-Hungary	•••		1892	79,784,§	1 17 5		
Belgium		•••	1891	13,864,	2 5 1		
Denmark	• • •		1889-91	3,038,	1 8 0		
France (including Algeria)	• • •		1891	126,325,	2 19 10		

^{*} For the revenue of each Australasian colony, see table following paragraph 305 ante.

[†] For a comparison of the railway revenues and land revenues of the Australasian colonies with the total revenues, see paragraphs 314 to 319 ante.

t The populations of foreign countries on which these calculations are based are generally those given in Part "Population," ante.

[§] This amount is made up of estimates for 1892 of £47,323,000 for Austria, and £32,461,000 for Hungary. The florin has been assumed to be equal to 1s. 8d.

REVENUES OF FOREIGN COUNTRIES—continued.

333. According to this table and that following paragraph 328 Countries ante, the countries which raise the largest revenues of any in the world are Germany and France; and then the United Kingdom, Russia, British India, Austria-Hungary, and the United States.

^{*} See footnote (1) on page 240.

[†] This amount is made up of the estimated ordinary revenue of the Empire for 1890-91, £34,715,223 (exclusive of contributions by the States and extraordinary receipts), and of the revenues of the following States, according to their Budget estimates, for the dates named, viz.:—Alsace-Lorraine, £2,225,917 in 1891; Anhalt, £519,334 in 1890-91; Baden, £2,454,501 in 1890; Bavaria, £13,719,610 in 1890; Bremen, £862,547 in 1889; Brunswick, £592,560 in 1890; Hamburg, £2,522,188 in 1890; Hesse, £1,069,213 in 1889-90; Lippe, £50,823 in 1890; Lübeck, £169,350 in 1890; Mecklenburg-Schwerin, £510,986 in 1890-91; Oldenburg, £374,954 in 1890; Prussia, £77,908,661 in 1890; Reuss-Greiz, £52,950 in 1891; Reuss-Schleiz, £86,697 in 1891; Saxe-Altenburg, £162,631 in 1891; Saxe-Coburg-Gotha, £119,760 in 1890-91; Saxe-Meiningen, £312,960 in 1890-91; Saxe-Weimar, £376,703 in 1890; Saxony, £4,533,549 in 1890-91; Schaumburg-Lippe, £37,448 in 1890-91; Schwarzburg-Rudolstadt, £107,841 in 1891; Schwarzburg-Sonderhausen, £120,531 in 1891; Waldeck, £58,140 in 1891; and Würtemburg, £2,972,670 in 1890-91.

This amount is made up of £5,275,000, revenue of Sweden in 1891, and £2,686,000, revenue of Norway in the same year.

After the revenues of these countries, the largest amounts are raised in Italy and Spain. These are the only countries whose revenues exceed the united revenues of the Australasian colonies. The revenue of Victoria is larger than that of Denmark, Greece, Roumania, Sweden and Norway, Switzerland, Tunis, Mexico, or Peru; and nearly as large as that of Holland or Egypt.

Countries raising largest amounts per head. 334. Germany, France, and the Argentine Confederation are the only countries named in the table which raise more per head than the United Kingdom, where the proportion is slightly larger than in Holland or Belgium. In Victoria more than two and a half times as much per head is raised as in Germany or France, and nearly three and a half times as much as in the United Kingdom.

Taxation.

335. The amounts whereof revenue is made up may be divided into two classes, viz., those raised by taxation and those raised otherwise. In Victoria, the former class consists of Customs and Excise duties, wharfage rates, port and harbour dues, business licenses, duties on bank notes, duties on estates of deceased persons, a land tax, and stamp duties. The latter class comprises amounts derived from the sale or occupation of Crown lands, from railways, from water supply, from post and telegraph offices, from the Mint, from fees, fines, and forfeitures, from the interest on the public account, from the labour of prisoners, etc. The following figures show the result of a division of the Victorian revenue upon this principle:—

### TAXATION, 1890-91.

					£
Revenue rai	ised by taxation	•••	•••	•••	3,252,638
,,	otherwise	• • •	•••	• • •	5,090,950
	Total	•••	•••	•••	8,343,588

Taxation per head.

336. In 1890-91, less than 39 per cent. of the total revenue was raised by taxation; and if the amount so raised be divided by the estimated mean population of the financial year, already stated to have been 1,133,266, an average will be obtained of only £2 17s. 5d. to each individual. The following table contains a statement of the gross amount of taxation, the average amount per head, and the proportion of taxation to the total revenue, during each year since 1853:—

Taxation, 1853 to 1890-91.*

		Taxation.

1890-91	3 252 638	2 17 5	38.98

Note.—An export duty on gold existed from May, 1855, to the end of 1867. The receipts from that source have not, for the purposes of this table, been considered as taxation.

337. It will be observed that in 1890-91, as compared with 1889-90, Comparison a falling-off of nearly £380,000, and as compared with 1888-9 a

of taxation 1890-91 with former years.

† For mean population of each year, see table following paragraph 273 ante.

^{*} According to figures contained in a statement distributed to Members of the Legislative Assembly by the Honorable the Treasurer in July, 1892, the taxation in 1891-2 (partly estimated) amounted to about £3,145,000, or £2 14s. 6d. per head of the estimated mean population (1,157,680) of that financial year.

falling-off of nearly £500,000, took place in the gross amount raised by taxation; whilst the average amount per head in those years respectively decreased by 8s. 5d. and by 12s. 3d. With these exceptions, however, the gross amount of taxation in 1890-91 was much larger than in any previous year, and the taxation per head was higher than in any previous year since 1858 except 1887-8. proportion of taxation to revenue was considerably lower than in the two previous years, and was also lower than in any other year since 1880-81 except 1883-4.

Heads of taxation.

338. The following is a statement of the amounts received under the various heads of taxation during each of the last eight years:—

HEADS OF TAXATION, 1883-4 TO 1890-91.*

				Amount	Received	•

Heads of taxation previous years compared.

339. It will be noticed that of the falling-off in the revenue from 1890-91 and taxation since 1888-9, amounting to £500,000, £344,000 was under the head of Customs, £10,000 under Wharfage rates, £30,000 under Excise duty on tobacco, £25,000 under Ports and Harbours, £52,000 under Duties on Estates of Deceased Persons, and £42,000 (estimated) under Stamp duty, as against which there appears one solitary increase of £13,000 under Excise duty on Spirits; whilst, of the as compared with 1889-90, amounting to £380,000, falling-off £130,000 was under Customs, £11,000 under Tobacco (excise), £9,000

^{*} See also footnotes to table following paragraph 285 ante.

[†] Consisting, chiefly, of one-fifth of the total amount of wharfage rates collected at the Port of Melbourne—the remaining portion of these rates being retained by the Melbourne Harbor Trust. ‡ Duty reduced one-half on 1st January, 1890.

^{\$} Chiefly tonnage dues. The rate was reduced from 1s. to 6d. on 1st January, 1890.

| Decrease in 1886-7 owing to the proportion payable to revenue by municipalities out of receipts from publicans' licence fees, etc., being then and thereafter made payable into the Licensing Act Fund. Of the amount in 1890-91, £15,682 was for auctioneers' licences. ¶ Roughly estimated for 1884-5 and subsequent years. See footnote (§) on page 177 ante.

under Ports and Harbours, £215,000 under Duties on Estates of Deceased Persons, which was exceptionally large in 1889-90, and £12,000 under Stamp duty. The decreases, under Tobacco (excise) and Ports and Harbours, were merely due to large reductions effected in 1889-90 in the rates of duty, but the decrease under Customs took place notwithstanding a net increase of Customs duties, estimated assuming the imports remained constant—to bring in an additional revenue of nearly £100,000 per annum.*

340. In all the years the greater portion of the taxation has been Proportion derived from Customs duties. The proportion from that source, revenue to however, has gradually fallen from 89 per cent. in 1874-5 and 87 tion, etc. per cent. in 1875-6, to as low as 72 per cent. in 1881-2, and between 74 and  $76\frac{1}{2}$  per cent. in the eight years 1882-3 to 1890-91, excepting 1889-90, when the proportion again fell to 72 per cent. The revenue derived from Customs duties during 1890-91 was equivalent to a charge of 11 per cent. on the estimated total value of imports during the same year.†

341. The following is a comparative statement for the same eight customs financial years of the principal heads under which taxation was levied 1884 to 1891. by means of Customs duties:—

Customs duties, 1890-91 compared.

342. It will be observed that in 1890-91 as compared with the 1889-90 and previous year there was a falling-off under all the heads of Customs revenue except four, whilst the total net decrease amounted to about The principal reductions were £10,000 under wine; £130,000. £20,800, in addition to £45,500 in the previous year, under tea, in consequence of the duty being reduced from 3d. to 1d. per lb. on the 1st January, 1890; £5,300, in addition to £6,200 in the previous year, under coffee and cocoa, etc.—the duty of 3d. per lb. on the raw product having been remitted on the same date; £7,000, in addition to £6,000 in the previous year, under hops—notwithstanding the raising of the duty from 6d. to 8d. per lb. from the 24th October, 1889; £800, in addition to £1,500 in the previous year, under malt, although the duty was increased fifty per cent. on the 25th September, 1889; £12,000, in addition to £125,000 in the previous year, under articles subject to ad valorem duties, on many of which the duties had been considerably raised at various periods during the six months ended 31st December, 1889; and £106,000 under all other articles. principal increases were £12,000 under tobacco, and £38,000 under live stock, there being also small increases under cigars and sugar. The falling-off generally in 1890-91 was, as in the previous year, undoubtedly due to a contraction in the import trade, which has fallen off considerably since 1888-9. If the volume of trade had remained constant, the revenue would have been increased by nearly £100,000 per annum, owing to the duties having been raised in 1889-90.*

Customs dutiesincrease in seven years.

343. Comparing 1890-91 with 1883-4, it will be seen that the total amount derived from Customs duties increased by £740,000, or 43 per cent. The principal articles which contributed to this augmentation were spirits, wine, and beer, which show an increase of £206,700, or 38 per cent., tobacco and cigars of £191,900, or 149 per cent., live stock £47,000, or 123 per cent., articles subject to ad valorem duties of £210,000, or 48 per cent., and "all other articles" of £122,000, or 42 per cent.

Taxation on chief articles of import.

344. Nearly one-third of the Customs revenue is derived from intoxicating liquors, and more than one-eighth from tobacco and cigars, whilst  $5\frac{1}{4}$  per cent. is from sugar,  $1\frac{3}{4}$  per cent. from tea, coffee, and cocoa, and nearly 2 per cent. from fruits and vegetables. relative importance of the various heads of imports as sources of Customs revenue is shown in the following table, which gives a statement of the total amount per head of the population, of duty received

^{*} See table following paragraph 252 post.

in 1890-91 from each of the principal groups of articles; also the proportionate amount received from the articles embraced in each group to the total amount received:—

Note.—The receipts, as shown in this and the two following tables, having been obtained from the Customs, will be found to differ somewhat from those shown in the previous table and other tables in this Part, which are based upon the Treasurer's statements. The reason of the difference is that the Treasury accounts are closed absolutely on the 30th June, whereas the Customs accounts are not closed until returns from all the ports in the colony are received in a complete state, so as to embrace transactions up to the last day of the financial year.

Customs revenue estimated and received, 1881 to 1891. 346. In seven of the eleven years ended with 1890-91, the total amounts received through the Customs exceeded the Treasurer's estimate, and in four of those years the receipts were below that estimate. Over the whole period the receipts exceeded the estimate by

an average of nearly £86,000 per annum, as is shown in the following table:—

CUSTOMS REVENUE ESTIMATED AND RECEIVED, 1880-81 то 1890-91.

^{*} Net figures.

Taxes repealed and imposed. 348. Difficulties lie in the way of estimating accurately the extent to which the various heads of revenue are affected by the imposition, increase, or reduction of taxes. An attempt has, however, been made to form such an estimate in the following table for the last sixteen years, which, although giving necessarily imperfect results, will afford some idea of the direction in which the contributions of the people towards the cost of Government have been added to or reduced, also the extent of such increase or reduction during the period:—

TAXES REPEALED AND IMPOSED, 1875-6 to 1890-91.

	Taxes Repeal	ed or Reduc	ed.	Taxes Imposed or Increased.			
Year ended 30th	Estimated Loss to the Revenue—					Estimated Gain to the Revenue—	
June. Heads of Taxation.	During the Financial Year.	In Complete Years.	Heads of Taxation.	During the Financial Year.	In Complete Years.		
		£	£		£	£	
1876	Nil		•••	Succession duties increased from 5 to 5-10 per cent. on estates over £20,000 Tax on bank notes imposed	3,000 7,200	10,700 27,000	
1877	Nil	• • •	• • •	Nil	•••	•••

^{*} See footnote (†) on previous page.
† Of this item no satisfactory estimate can be given.

[†] This is the proportion actually received in 1884-5 at the increased rate of duty, but it does not correspond with the increased revenue from spirits, viz., £46,100, according to the table following paragraph 341 ante, owing to the quantity imported having fallen off by 6 per cent. The amount received from the increased duty was, moreover, much affected by an unusually large proportion—viz., 15 per cent. of the total quantity imported—having passed through the Customs during the first seventeen days of the financial year, and consequently at the lower rate of duty.

^{*} These amounts, being merely transfers of revenue from one Public Fund to another, do not affect the general taxation of the country.

[†] On the assumption that there would be no falling-off in the importation of the articles affected It should, however, be noted that the importations were exceptionally high during the year.

349. From the above table it would appear that, during the year Amount of 1889-90, additional taxation was imposed to the extent of £210,000, imposed in and old taxes reduced or remitted to the extent of £157,650—the net years. result being fresh taxation equivalent to about £52,350 per annum; also that, during the last sixteen years, the taxation imposed or increased, less that repealed or reduced, has resulted in an increased annual charge amounting to over half a million sterling,* thus-

					Estimated Annual Amount.
Taxati	on imposed or increased		• • •	•••	£891,700
"	repealed or reduced	• • •			380,450
	Net amount imp	osed, e	etc	• • •	<b>£</b> 511,250

350. The tax on bank notes was imposed under the Act 39 Vict. Duty on No. 526, which came into operation on the 1st January, 1876. It is at the rate of £2 on every £100 of the average amount of notes circulated by any bank between the 1st July and the 30th June of each financial year. The revenue received from this duty in 1890-91, was, as already shown, £30,736.

351. The Act for imposing a land tax (41 Vict. No. 575) came Land tax. into operation on the 28th August, 1877. It provides that all estates over 640 acres in extent, valued at upwards of £2,500, whether consisting of one block or several blocks of land not more than five miles apart, shall be taxed at the rate of one and a quarter per cent. upon their capital value, after deducting therefrom the sum of £2,500 only one exemption, however, being allowed in the case of a proprietor holding more than one estate. For the purpose of ascertaining the capital value, the estates in question are divided into four classes, the value being estimated according to the number of sheep they are able to carry, as follows:—

Value per acre.

Class I., ca	arrying	g 2 sheep or more per acre	 • • •	$\mathbf{\pounds}4$
Class II.,	,,	$1\frac{1}{2}$ sheep per acre	 	3
Class III.,	,,	1 sheep per acre	 	<b>2</b>
Class IV.,	12	under 1 sheep per acre	 	1

352. The extent of land assessed under this Act amounted in 1892 Extent of to nearly 6,965,000 acres, nearly half of which was placed in the lowest class, more than a third in the third class, about a ninth in the second class, and less than a twentieth in the first class.

assessed for land tax.

^{*} This result has been obtained by adding together the amounts estimated to be receivable in the first complete year of the operation of each tax, and deducting therefrom the sum of the amounts of the repealed taxes. In some instances the net amounts receivable in subsequent years would be less, and in others much more. Mere transfers of revenue (see preceding footnote) have been omitted.

Proportion of land total available and alienated land.

353. The area of Victoria is 56,245,760 acres, of which 22,359,000 assessed to acres either had been alienated in fee-simple or were in process of alienation when the year commenced. The area assessed for land tax thus amounted to nearly  $12\frac{1}{2}$  per cent. of the area of the colony, or to  $31\frac{1}{4}$  per cent. of the area alienated or in process of alienation.*

Number of estates assessed.

354. The number of estates assessed was 1,119, or 4 more than in 1891. As some proprietors own more than one estate, their number is less than the number of estates, and is set down at 863. however, actually less than this, as, whilst the returns show where the proprietor holds more than one estate in the same class, they do not distinguish cases of proprietors holding estates embraced in two or more classes.

Average size of estates assessed.

355. The average size of all the estates assessed is 6,224 acres, which is somewhat above the average of those in Class III. Classes I. and II. the estates average 2,531 and 3,392 acres respectively, and in Class IV. 9,311 acres.

Proprietors and number and size of estates assessed.

356. The following table shows, for each class, the number and area of estates assessed for land tax, the number of proprietors of such estates, and the average number of acres to each estate and to each proprietor:—

Proprietors and Number and Size of Estates Assessed for LAND TAX, 1892.†

		Estates Assessed.						
Class.	Class. Number of		Ar	ea.	Average Area to each			
	Proprietors.	Number.	Total.	Percentage of Each Class.	Proprietor.	Estate.		
			Acres.		Acres.	Acres.		
I.	102	122	308,756	4.43	3,027	2,531		
II.	202	227	769,909	11.05	3,811	3,392		
III.	319	410	2,533,872	36.39	7,943	6,180		
IV.	240	360	3,351,838	48.13	13,966	9,311		
Total	863	1,119	6,964,375	100.00	8,070	6,224		

Valuation of estates assessed.

357. The capital value of the estates, according to the valuation prescribed by the Statute, is over twelve millions sterling; but, after deducting the exemptions allowed, viz., £2,500, from the value of the estate or estates of each proprietor, the net taxable value is reduced

^{*} The land in process of alienation amounted to 6,267,000 acres, on which, on the average, more than half the purchase money had been paid. If this were left out of account, the proportion of freehold land assessed for land tax would be increased to 43 per cent. † According to the returns of the half-year ended 27th February, 1892.

to ten millions sterling. It may be pointed out that, although it may perhaps have been necessary to fix arbitrarily a scale for valuing estates for purposes of taxation, yet there is no doubt that the taxable value so arrived at is, in most cases, very much below the actual value of the estates.

358. The capital value of the estates in each class, according to Valuation of their estimated carrying capacity, the value of the exemptions, and each class. the net taxable value after deducting these, and the proportion of the net taxable value to the capital value, are given in the following table:—

VALUE OF ESTATES ASSESSED FOR LAND TAX, 1892.*

Class.	Capital Value.	Value of Exemptions.	Net Taxable Value.	Proportion of Net Taxable Value to Capital Value.
T	£	£	£ 000	Per cent.
I	1,232,992	255,000	977,992	79.32
<u>II</u>	2,305,999	505,000	1,800,999	78.10
III	5,269,286	797,500	4,471,786	84.87
IV	3,354,469	600,000	2,754,469	82.11
Total	12,162,746	, 2,157,500	10,005,246	82.26

359. The land tax payable varied from  $9\frac{1}{2}$ d. per acre in Class I. to Amount of  $2\frac{1}{2}$ d. per acre in Class IV., the average being nearly  $4\frac{1}{3}$ d. per acre; the payable. amount payable by each holder averaged £145, ranging from an average of £175 in Class III. to one of £111 in Class II., and the amount payable for each estate averaged £112, averaging £136 in Class III., and from £96 to £100 in the other classes. is a statement of the total amount payable annually in respect to the estates of each class; also the average amount payable per acre, per holder, and per estate:—

LAND TAX PAYABLE ANNUALLY, 1892.*

Class.	Total Amount per Annum.	Amount per Acre.	Amount by each Holder.	Amount for each Estate.
	£	d.	£	£
I.	12,225	9.50	119.9	$100 \cdot 2$
II.	22,513	7.02	111.5	$99^{\cdot}2$
III.	55,897	5.29	$175 \cdot 2$	136.3
IV.	34,431	2.47	143.5	95· <u>6</u>
Total	125,066	4:31	144.9	111:8

^{*} According to the returns of the half-year ended 27th February, 1892.

Difference in payments in each class.

360. It will be observed that, although the average amount payable per acre goes, as may be supposed, in regular succession according to classes, the difference between the acreable payment by each class and its successor is very marked—the difference between each class and its succeeding one varying from  $1\frac{3}{4}$ d. It will also be noticed that the amount paid on behalf of each estate in Class III. is fully 42 per cent. more than that paid on behalf of those in Class IV., notwithstanding that the average area of each estate in the former class is, as is shown in a previous table, one-third smaller than that in the latter.

Estates assessed 1880 and 1892. 361. The first general hearing of the appeals against the land tax was concluded in 1880. Since then the number of proprietors has increased by 45, and the area of the estates assessed by 69,629 acres, but the taxable value has decreased by £20,642. Except as regards the number of proprietors, which have increased in all cases, the increases have been confined to the third and fourth classes, the other two classes showing decreases, as is shown in the subjoined table:—

ESTATES ASSESSED FOR LAND TAX, 1880 AND 1892.

Cost of administering Land Tax Act.

362. The cost of administering the Land Tax Act during the year 1890-91 amounted to £1,013, as against £1,293 in the previous year.

Stamp duties.

363. Stamp duties were first imposed during the year 1879-80, under Act 43 Vict. No. 645, which came into force on the 18th December, 1879. The following, in a condensed form, are the

particulars of the duties levied thereunder, together with a list of the chief exemptions:—

#### STAMP DUTIES.*

I.—BILLS OF EXCHANGE AND PROMISSORY NOTES.	<b>.</b> 2.	d.
Bills of exchange, payable on demand, cheques, etc., each 0	0	
All other kinds (except bank notes)—		
For every £25 or fraction thereof of the total value up to £100 0	0	6
For every additional £50 or fraction thereof 0	1	0
(The maximum duty chargeable on any bill of exchange or promissory		
whatever be its amount or value, to be £10.)		
II.—RECEIPTS.		
Receipts or discharges for payment of £5 or upwards, each 0	0	1
III.—Conveyance on Sale of any Real Property, Applications, Conand Transfers under Transfer of Land Statute.	SEN	TS,
For every £50 of consideration or fraction thereof after deducting the		
first £50 0	<b>5</b> .	0

#### IV.—ANNUAL LICENCE.

Fire, fidelity guarantee, or marine assurance or insurance company— For every £100 of premiums received or fraction thereof, a licencefee per annum of

1 10 0

#### EXEMPTIONS.

Class I.—Cheques drawn on public accounts, or on those of a registered building or friendly society; drafts or instruments affecting the transmission of public moneys; drafts, orders, etc., of post office or other savings banks; and Government or municipal debentures.

Class II.—Receipts for moneys paid to or from public accounts for municipal rates, for deposits in banks in current account, or for moneys paid into a charitable institution, a registered friendly society, a fire, life, fidelity guarantee, or marine insurance (or assurance) company, or into a post office or other savings bank.

Class III.—Crown grants; instruments for conveyance of property to the Crown or a public department, to a registered friendly society, or to a religious, charitable, or educational association; and marriage settlements.

Class IV.—Any private guarantee fidelity insurance scheme promoted amongst and sustained solely for the benefit of the officers and servants of any one particular public department, company, firm, or person, or of the officers or members of a registered friendly society.

364. The revenue from the "Sale of Stamps" amounted to Revenue £751,330† in 1890-91, as compared with £797,894 in the previous stamps. year. For reasons already explained, there is no means of ascertaining accurately what proportion of this is derived from stamp duties; but after making due allowance for the value of stamps on telegrams—which has been ascertained; of those used for postage which has been estimated; and of those used for fees—the balance representing the apparent revenue from stamp duties was £218,000 in The latest year for which exact information is available is 1890-91.

^{*} At the time of going to press (September, 1892) a Bill was under the consideration of Parliament for the imposition of further Stamp Duties.

[†] Including £25,713 cash received in lieu of stamps in the Registrar-General's Office under Act No. 1010, as compared with £23,499 in 1889-90. The approximate stamp revenue (including collections in cash) for 1891-2 was £677,848. I See footnote (§) on page 177 ante.

1882-3, in which the revenue from stamp duties amounted to £133,433. The cost of printing stamps of all kinds amounted to £5,228 in 1890, and £5,848 in 1891. The following table shows the stamp revenue during the last seven years, distinguishing that derived from telegrams from that resulting from other services:—

STAMP REVENUE, 1884-5 to 1890-91.

			Stamps	used for—	m . 1

Order of colonies in respect to taxation.

366. The amount of taxation per head in the last year referred to in the table was lower in Victoria than in any of the other colonies except New South Wales and South Australia, which had both the same amount per head. The following is the order in which the colonies stood in this respect during that year, the colony with the highest taxation per head being placed at the top, and the colonies with the lowest at the bottom of the list:—

### ORDER OF COLONIES IN REFERENCE TO AMOUNT OF TAXATION PER HEAD.

- 1. Western Australia.
- 2. Queensland.
- 3. New Zealand.
- 4. Tasmania.

- 5. Victoria.
- New South Wales. South Australia.

Order of colonies in respect to evenue 🕽 aised by taxation.

367. The colonies differ considerably in respect to the proportion that the amount raised by taxation bears to the total revenue. in the last year named, whilst Tasmania raised three-fifths of her revenue by taxation, New Zealand and Western Australia raised about one-half, Queensland considerably more than, and Victoria somewhat less than, two-fifths, and South Australia and New South Wales less than a third. The following is the order in which they respectively stand in this particular, the colony in which the proportion of revenue raised by taxation is largest being placed first, and the remainder in succession:

^{*} See footnote (†) on page 258.

## ORDER OF COLONIES IN REFERENCE TO PROPORTION OF REVENUE RAISED BY TAXATION.

- 1. Tasmania.
- 2. New Zealand.
- 3. Western Australia.
- 4. Queensland.

- 5. Victoria.
- 6. South Australia.
- 7. New South Wales.

368. If the gross amounts raised by taxation in the different Taxation of colonies during 1890, of which particulars are given in the table, be and Ausadded together, it will be found that the total taxation levied on the Continent of Australia amounted to nearly nine millions sterling; and the total taxation of the colonies on the continent, added to that of Tasmania and New Zealand, amounted to about eleven and a half millions sterling. The exact figures will be found in the following table, also the average amount of taxation per head of the population, and the proportion that the taxation bore to the total revenue:—

TAXATION OF AUSTRALIA AND AUSTRALASIA, 1890.*

		Taxation.	
	Gross Amount.	Average per Head.	Percentage of Total Revenue.
Continent of Australia	£ 8,845,718	£ s. d. 2 19 10	36.48
Ditto, with Tasmania and New Zealand	11,474,134	3 1 8	39.27

369. By comparing the above figures with those of Victoria, it will comparison be found that in this colony the taxation per head of the population is 4s. 3d. lower, and the proportion of taxation to the total revenue is also slightly lower, than the corresponding items in the Australasian colonies as a whole.

of Victoria and Australasia.

370. The taxation in the United Kingdom and the few British Taxation in possessions respecting which particulars are at hand is given in the possessions. following table:—

TAXATION IN BRITISH POSSESSIONS.

					Taxation.

Taxation in Australasia and other British possessions compared. 371. It will be observed that the amount raised by taxation in Australasia is three-fourths more than that in Canada; but that the amount raised by taxation in India is nearly three times, and in the United Kingdom seven times, as large as that so raised in Australasia. It might be supposed that those countries which depended almost entirely on taxation for their revenue would be more heavily taxed than countries which had other ample resources. The reverse, however, is the case with the Australasian colonies; for whilst they raise barely 40 per cent. of their revenue by taxation—or the smallest proportion of any of the British possessions named except India and Natal—their average taxation per head exceeds by 23s. that in the United Kingdom, which raises 82 per cent. of its revenue by

^{*} Including local taxation.

[†] For gross amount of taxation and taxation per head, and proportion of taxation to total revenue, in the various Australasian colonies, see table following paragraph 365 ante.

taxation, and is, moreover, in proportion to population, more heavily taxed than any of its other dependencies of which particulars are at hand.

372. In Victoria the gross amount of taxation is about double Taxation in that in the Cape of Good Hope, and is equal to more than half that and other The average per head is about 19s. higher than in the United Kingdom; but in proportion to revenue, the taxation of Victoria, being a little less than the average of Australasia, is extremely low when compared with the other portions of the British dominions of which information is available.

British possessions compared.

373. From the manner in which the statistical returns of Foreign Taxation in countries are compiled, it is not always easy to separate the items of countries. taxation from other sources of revenue. An endeavour, which it is believed is fairly successful, has, however, been made to do this in the case of the countries named in the following table:—

TAXATION IN FOREIGN COUNTRIES.

	į			Taxation.

^{*} For figures of population, see Part "Population" ante.

[†] For figures of revenue, see table following paragraph 332 ante.

This amount is made up of £35,602,000 taxation in Austria, and £22,917,000 approximate taxation in Hungary for the year 1892.

[§] Based on the population of Russia in Europe. The proportion to the population of the whole Russian Empire is 10s. 2d.

Gross amount of various countries.

374. It will be observed * that the gross amount raised by taxation taxation in is larger in France than in any other country of which information is given, and that the United States comes next in this respect; the United Kingdom follows; then Austria-Hungary, Russia, Italy, British India, and Spain in the order named. The amount of taxation in the Australasian colonies, taken as a whole, is larger than that levied in any country except Brazil, Turkey, Japan, and the countries just named, whilst it is considerably larger than that in the Argentine Confederation, Holland, Egypt, Mexico, Portugal, or Belgium. amount in Victoria is more than three times as large as that levied in Switzerland, and about half as large again as that levied in Denmark or Greece; but considerably below that in any other of the countries named.

Taxation per head in various countries.

375. The taxation per head is larger in the United Kingdom than in any other independent country except the Argentine Confederation and France, and in this respect Holland, Italy, Portugal, Austria-Hungary, and Spain stand next. The taxation per head, however, in all the Australasian colonies is larger than in the United Kingdom; and in all of those colonies, except New South Wales and South Australia, it is larger than in the Argentine Confederation.

Proportion of revenue raised by taxation in various countries.

376. It will be observed that, with three exceptions—Belgium, Greece, and Switzerland—all the countries named in the last table raise more than half their revenue by taxation; whilst the Australasian colonies as a whole raise only two-fifths from that source. revenues of the United States, Mexico, Brazil, and Denmark appear to be almost entirely derived from taxation; and although the United Kingdom raises more than four-fifths of its revenue from that source, four of the countries named raise a higher proportion.

Taxation by Customs in Australasian colonies.

377. In all the Australasian colonies the principal part of the taxation is raised through the Customs. In the following table the amount so raised in each of those colonies is given for a recent year, together with the proportion of such revenue to the total taxation and the total imports†:—

^{*} See also the tables following paragraphs 365 and 370 ante.

[†] For particulars of taxation by Customs in other British and Foreign countries, see Victorian Year-Book for 1886-7, paragraphs 329 and 330; also that for 1883-4, paragraph 291 et seq.

TAXATION BY CUSTOMS IN AUSTRALASIAN COLONIES, 1890.

,				Revenue from Customs Duties.				
C	olony.				Proporti	Proportion to—		
				Amount.	Total Taxation.	Total Value of Imports.		
				£	Per cent.	Per cent.		
Victoria (1890-91)	• • •	• • •		2,480,635	76.27	11.11		
New South Wales	• • •	•••	• • •	1,888,321	68.71	8.35		
Queensland	• • •	•••		1,243,046	84.45	24.53		
South Australia	• • •	• • •		602,527	76.25	7.29		
Western Australia	•••	• • •		182,546	89.31	20.88		
Tasmania	• • •	• • •		329,067	$72 \cdot 41$	17.34		
New Zealand	•••	• • •		1,535,868	70.65	24.53		

378. It will be observed that in Victoria, during 1890, about 76 customs per cent. of the taxation, or about the same as in South Australia, proportion was raised through the Customs, and that the proportions in New South Wales, New Zealand, and Tasmania were somewhat less; whereas in Queensland all but  $15\frac{1}{2}$  per cent., and in Western Australia all but about 11 per cent. was levied through the Customs.

taxation.

379. It will, moreover, be noticed that in Victoria the tax on the customs import trade as a whole was equivalent to an average duty of 11 per proportion cent. ad valorem; which proportion was considerably lower than in any imports. of the other Australian colonies, except South Australia and New South Wales, in the former of which the rates of duty were not high, and in the latter the dutiable articles were comparatively few in Since the duties on manufactured articles are for the most part much higher in Victoria than in any of the other colonies, the small proportion which the Customs revenue bears to the value of imports is probably owing to her importing, in a larger proportion than the others, raw, and consequently undutiable, material. proportion of Customs duties to imports is seen to be highest in New Zealand, Queensland, Western Australia, and Tasmania, it being 24 per cent. in the first, and 17 per cent. in the last named colony.*

380. The following table gives a statement of the revenue and Municipal expenditure of municipalities in the year 1891, the amounts raised and expended in cities, towns, and boroughs being shown separately from those in shires:—

and expenditure.

Endowment of municipalities.

381. In 1889-90 and 1890-91 the subsidy voted by Parliament and paid to the municipalities amounted to £450,000 in each year, as compared with £340,854 in 1888-9, and £310,000 annually for several previous years.

Rate of endowment.

382. According to the Local Government Act 1890 (54 Vict. No. 1112), the endowment payable to any city, town, or borough was not to exceed £2,000; and if the general rate levied in a municipality exceeded one shilling in the pound, the endowment was to be calculated on an amount which bore the same proportion to the total amount of rates received as one shilling bore to the rate levied.‡ Subject to these conditions, the endowment was payable to shires in the proportion of £2, and to cities, towns, and boroughs, in the proportion

^{*} Including receipts from the "Licensing Act 1885 Fund." In the financial year, 1889-90, the "equivalent" amounted to £92,225, and in 1890-91 to £91,706.

[†] Including expenditure of proceeds of loans. For amount of outstanding loans, see table showing "Municipal Debts," post.

[‡] For ratings in municipalities, see part "Population," ante.

of £1, for every £1 of general rates collected.* These proportions, however, could be altered in any Act appropriating the grants. Accordingly, in 1890-91, an exception to the rule was made in the case of 15 shires, and portion of a sixteenth, newly formed or of a mountainous character, which received £3 for every £1 of rates.

383. In 1891 the expenditure exceeded the revenue in cities, towns, Municipal and boroughs by 17 per cent., and in shires by 6 per cent., as com-ture in pared with an excess of expenditure over revenue of 27 per cent. in revenue. cities, towns, and boroughs, but an excess of revenue over expenditure of 2 per cent. in shires in the previous year.

384. The expenditure was greater than the revenue in 32 of the Munici-59 cities, towns, and boroughs, and in 46 of the 133 shires in 1890; and in 23 of the 60 cities, towns, and boroughs, and in 74 of the 137 shires in 1891.

palities in which expenditure exceeded revenue.

385. In 1891 payments of salaries formed nearly  $7\frac{1}{2}$  per cent. of salaries in the revenue of cities, towns, and boroughs, and nearly 11 per cent. of palities. that of shires.

386. Subjoined is a statement of the revenue and expenditure of Harbor the Melbourne Harbor Trust† during the fourteen and a half years which have elapsed since the Act came into operation under which that body was created. The net receipts here shown are less than the gross receipts by about one-fifth, that being the proportion payable by the Commissioners of the Trust into the consolidated revenue:—

receipts and expen-

Receipts and expenditure compared.

387. In the fourteen and a half years the Trust has been in existence, the net receipts have amounted to £1,927,043 and the expenditure to £3,531,132, or £1,604,089 in excess of the receipts. this excess, loans* amounting to £2,000,000 have been raised. be observed that the revenue, which averaged only about £120,000 in the five years ended with 1886, has since risen to an average of £191,000 in the last five years. The expenditure of the Trust may be condensed into three main divisions, the first being Plant, on which, during the period the Trust has been in existence, £533,096 has been laid out, or somewhat more than a seventh of the whole expenditure; the second being the Improvement and Maintenance of the Harbour, together with the wharves and approaches, on which £2,453,135 has been expended, or not quite five-sevenths of the whole amount; and the third being the Management of and Interest on Loans, which has absorbed £544,901, or one-seventh of the whole amount. The cash at credit on the 31st December was £468,647; and the liabilities under contracts in progress amounted to £85,064.

General and local revenue and expenditure.

388. A statement of the revenue and expenditure of the General Government added to those of the Municipalities and of the Melbourne Harbor Trust during the last seven years will be found in the following table. From the totals of municipal revenue and expenditure the amounts granted by the State have been deducted. The expenditure of the proceeds of loans is entirely left out of account in the Government returns, but is included in the municipal expenditure:—

^{*} For particulars of loans, see table "Melbourne Harbor Trust Loans," post.

^{*} The financial year of the General Government ends on the 30th June; that of Melbourne and Geelong on the 31st August; that of other municipalities on the 30th September; and that of the Melbourne Harbor Trust on the 31st December.

[†] Although the financial years of the respective bodies named in this table terminate at different dates (see last footnote), the same populations as have already been taken (see table following paragraph 273 ante) to calculate the amount of general revenue and general expenditure per head have been used to make these calculations. As the population varies but slightly in so short a period. this will scarcely, if at all, affect the result.

General, local, and loan expenditure, 1879 to 1891.

390. It has been already stated that in the last two tables the expenditure of the proceeds of loans contracted by the General If, however, it should be desired to Government is not included. know the total amount of public money spent in the colony, this must be added, which, having been done, the result, together with the amount per head of the average population, is given in the following table for the thirteen years ended with 1891:—

GENERAL, LOCAL, AND LOAN EXPENDITURE, 1879 TO 1891.

Public money spent in

391. It will be noticed that the total amount of public money spent per head ranged from £7 13s. 8d. in 1881 to £14 1s. 1d. in other years. 1890; the proportion of which derived from Government loans varied from 19s. 4d. per head in 1881 to £3 9s. per head in 1889. will further be remarked that the total amount per head in 1891 was much larger than in any previous year except in 1890.

General and local taxation.

392. The amount of taxation under the General Government, under the Municipal Bodies, and under the Melbourne Harbor Trust, is given in the following table for each of the seven years ended with 1891, the items being specified in the last two cases. The principle upon which the items of taxation are separated from the general revenue has been already explained. † The local taxation is separated from the whole municipal revenue by rejecting—besides all grants received from the General Government—rents of buildings and land, proceeds of the letting of halls, etc., the balance being considered as taxation. The taxation levied by the Harbor Trust consists only of wharfage rates:—

^{*} Including expenditure from Municipal and Harbor Trust loans. † See paragraph 335 ante.

' 393. The aggregate amounts of taxation raised by the Government General and and the municipalities represented, in 1885, a proportion of £3 10s. 7d. taxation per head. to each individual in the community; in 1886, £3 11s. 9d.; in 1887, £3 12s. 10d.; in 1888, £3 18s. 10d.; in 1889, £4 10s.; in 1890, £4 6s. 10d.; and in 1891, £3 18s. 5d.

394. It has already been pointed out that by far the greater chief portion of the General Government taxation is derived from Customs taxation. duties‡—the proportion varying in different years from 72 to 89 per Seventy-six per cent. of the Municipal taxation in 1885, 77 per cent. in 1886, 76 per cent. in 1887, 78 per cent. in 1888, 80 per cent. in 1889 and 1890, and 81 per cent. in 1891, was derived from rates.

395. The public debt of Victoria amounted on the 30th June, Public debt. 1891, to £43,610,265,§ consisting of moneys—

Borrowed in	Victoria England	•••	•••	•••	1,391,565 $42,218,700$
Total	•••	•••	•••	• • •	43,610,265

396. The aggregate amount of the loans raised up to the 30th June, Purposes for 1891, was £55,053,885; but a total of £11,443,620 having been repaid, were

which loans incurred.

^{*} The financial year of the General Government ends on the 30th June; that of Melbourne and Geelong on the 31st August; that of other municipalities on the 30th September; and that of the Melbourne Harbor Trust on the 31st December.

[†] For details of Government taxation, see table following paragraph 338 ante.

[‡] See paragraph 340 ante. § Including one million floated on the 7th July, 1892. On the 30th June, 1892, the public debt amounted to £46,711,287.

viz., £2,379,200 out of the general revenue, and £9,064,420 out of the proceeds of redemption loans—the balance outstanding on the 30th June, 1891, was reduced to £43,610,265. The amount of public debt borrowed under each of the purposes for which the debt was incurred, the amount paid off, and the amount outstanding on the 30th June, 1891, are shown in the following table:—

[‡] For expenditure of the net proceeds of these amounts, see table following paragraph 297 ante; and for further details of the expenditure of railway loans, see portion relating to Railways in Part "Interchange" in the second volume.

This amount was borrowed in 1854 by the city of Melbourne and town of Geelong, the principal and interest being guaranteed out of the general revenue of the colony.

** Exclusive of conversion loans amounting to £1,043,780.

[§] Inclusive of £183,900 of late Melbourne and Hobson's Bay United Railway Co.'s debentures. || Of this amount £678,063 was authorized to be re-lent to municipal bodies, £887,900 to Water Works Trusts, and £778,640 to Irrigation and Water Supply Trusts, for local waterworks, the principal and interest being repayable by annual instalments—the former into a sinking fund, the latter into the general revenue. For accumulation of Sinking Fund (Municipalities Redemption Account), see table, "Trust Funds," post. Waterworks Trusts also received grants from the loan account amounting to £97,558.

397. It will be observed that at the present time 95 per cent. of the Borrowings Victorian borrowings has been devoted to railways, waterworks, and devoted to revenue other revenue producing works, from which the State derives a con- works. siderable income. Only 5 per cent. of the debt is not directly revenue producing, and this has been expended on such useful and permanent works as bridges, defence works, State schools, public buildings, etc.

398. Of the debt outstanding on the 30th June, 1891, a sum of Public debt, about £53,000 was authorized as early as 1857, nearly 3 millions authorized. during the ten years ended with 1870, over 10 millions in the next decade, and over  $30\frac{1}{4}$  millions—of which nearly 9 millions was for purposes of redemption—in the last decade, as will be seen by the following table, which shows the years in which the various amounts of which the debt is composed were authorised and the number of the Act by which such authorization was given; also the changes that have been effected by means of conversion operations:—

^{*} Conversion loans, the total amount of which was £1,043,780.

‡ Debentures of M. and H. B. U. Railway Co., taken over by the Government.

Increase of debt by conversion of 6 and 5 per cent. debentures into 4 per cent. stock.

Growth of the public debt.

399. The gross total of the public debt increased from £5,000,000 in 1860 to nearly £12,000,000 in 1870, and again to over £22,000,000 in 1880-81—the amount at the end of each decennial period being During the ten years about double that at the commencement. subsequent to 1880-81, a net amount of £21,000,000 was added to the debt. The whole increase in 30 years was in a much greater ratio than the increase of population, for the indebtedness per head gradually rose from £9 10s. in 1860 to £38 in 1890-91. A considerable increase also took place as compared with the total revenue, for whilst in 1860, or three years after the colony commenced to borrow, the debt was equivalent to only  $1\frac{2}{3}$  year's revenue, in 1870 it was equivalent to  $3\frac{2}{3}$  years', and in 1890-91 to nearly  $5\frac{1}{4}$  years' revenue. The amount of debt outstanding, together with the average per head and the multiple of revenue at the end of 1860 and the two following decennial periods, and of the four years ended with 1890-91, are shown in the following table:—

GROWTH OF THE PUBLIC DEBT, 1860 TO 1890-91.*

At end of the H	inancial Y	ear.	Amount Outstanding.	Averag	ge per	Multiple of Revenue.	
			£	£	s.	d.

1890-91	• • •		43,610,265	38	0	6	5.23

Note.—On the 30th June, 1892, the public debt was £46,711,287 (including Treasury Bonds £1,000,000). At the same date the estimated population was about 1,162,000. The amount of indebtedness per head was thus £40 4s.; and the multiple of the revenue was 6 04.

Increase of debt, 1890-91.

400. It will be noticed that in 1890-91 the public debt increased by £2,232,572. This was in consequence of the debt having been added to by a new loan for £3,000,000 (including a redemption loan of £850,000) floated in London in April-July, 1891, and by the stock on the Melbourne register having been increased by £82,572; as against which must be set £850,000 on account of a loan paid off on the 1st January, 1891. The debt per head of population increased by

^{*} For amount of the public debt at the end of each year, see first folding sheet to the second volume.

- £1 0s. 7d., whilst the ratio of debt to revenue rose from less than 5 years of the latter in 1889-90 to nearly  $5\frac{1}{4}$  in 1890-91.
- 401. The debt is composed of debentures—some of which are Repayment inscribable as stock—and inscribed stock. The following are the dates and places at which the various amounts of which the debt is composed are repayable:—

^{*} Original debentures were convertible into inscribed stock at option of holders. The amount so converted, according to advices received to the 30th June, 1891, was £8,526,400, the balance being still held in the form of debentures.

[†] Or at any time between the dates named after due notice.

[†] Or at any time thereafter, at option of the Government, after twelve months' notice in the Government Gazette.

[§] Of which £30,000 is redeemable on 1st July, 1892; £22,000 on 1st July, 1895; £100,000 on 1st September, 1895; and £31,900 on 1st January, 1897. Amount payable in London and Melbourne has been apportioned according to the interest paid in each city.

Reduced rate of interest on loans.

402. The last of the old 6 per cent. loans was paid off on 1st January, 1891, making a total of £9,073,320, which has been redeemed from 1st October, 1883. With the exception of £276,100 redeemed out of revenue, all the 6 per cent. loans have been replaced by redemption loans bearing only 4 or  $3\frac{1}{2}$  per cent. interest, and the nominal saving by such substitution in the annual interest payable amounts to £180,195.*

Loans redeemed.

403. The loans which have been redeemed up to the 30th June, 1891, amount in the aggregate to £11,443,620, of which £2,379,200 was provided for out of revenue, and £9,064,420 by means of redemption loans, bearing interest at the rates of 4 or  $3\frac{1}{2}$  per cent. Nearly three-fourths of the amount was repayable in London, and the remainder in Melbourne. The following are the particulars:—

Victorian Governmentstock.

404. Victorian stock on the Melbourne register was first authorized under the *Public Works Loan Act* 1872 (36 Vict. No. 428), and originally amounted to £1,113,000. Owing to portion of this

^{*} Exclusive of the saving on the loan of £276,100, which was paid off out of revenue.

[†] These are the due dates. The amount due on 1st November, 1882, and portion (£138,600) of that due on 1st November, 1883, was, however, paid off in February, 1882.

[†] Treasury bonds.

[§] Only £200 bore interest at  $3\frac{1}{2}$  per cent.

This amount was repaid as follows:—£100,000 on 1st July, 1880; £59,600 on 1st March, 1881 £20,400 on 1st May, 1882; £48,300 on 1st January, 1883; £38,900 on 1st January, 1886.

being converted into debentures (as being more readily negociable by the Government in case of emergency), which operation was counterbalanced to some extent by re-conversions and fresh issues, the amount outstanding became reduced on the 30th June, 1891, to £1,049,465.* In the case of the first three loans issued in London since the 1st January, 1883—amounting to £10,000,000—the option was given to holders of converting their debentures into stock, to be registered in London; whilst the subsequent loans raised up to the end of the financial year 1890-91—amounting to £20,000,000—were issued as stock in the first instance. The privilege referred to, according to advices received up to the 30th June, 1891, had been availed of to the extent of £8,526,400, so that the stock then outstanding upon the London register amounted to £28,526,400. amount of stock on the two registers combined was thus £29,575,865. Of this amount, £19,575,865 bears interest at the rate of 4 per cent., and £10,000,000 at the rate of  $3\frac{1}{2}$  per cent. per annum.

405. About a fourth of the public debt bears interest at  $3\frac{1}{2}$  per Rates of cent., whilst nearly two-thirds bears interest at 4 per cent., and the balance at higher rates up to 5 per cent., the average being 4.00 per cent. The following are the rates of interest payable on the various amounts of which the public debt of Victoria was composed on the 30th June, 1891:—

Rates of Interest.				Ar	mount at each Rate.

		10tai	• • •		230,010,200

406. Nearly three-fourths of the interest on the debt is payable Interest on in July and January, and the remainder in October and April. In connexion with this, Messrs. W. Westgarth & Co., of London, whilst admitting the inconvenience to the colony of having large interest amounts falling due at one time, have pointed out that the greatest degree of negociability for the stock can only be attained by making

^{*} Of the amount outstanding, £573,191 is held by the public, and £476,274 by the Government, viz.—£320,176 on account of Trust Funds invested, and £156,098 on account of investments by municipalities.

the periods of payment uniform for all loans. All but about one thirtieth of the interest is payable in London, and the remainder in Melbourne. The following table shows the annual interest amounts on the debt as it existed on the 30th June, 1891, distinguishing the time when and places where payable:—

Annual Interest on Publ	LIC DEBT AT	$^{-30}\mathrm{TH}$	JUNE.	1891.

	Grand Total	•••	59,084	1,686,365	1,745,449*			

Note.—According to the Treasurer's Finance Statement, 1890-91, the amount actually payable in 1891-2 was £1,709,669. The difference between this and the amount shown in the table (£35,780) is accounted for by the non-payment of £18,280 on debentures not issued to the public, but held by Government on account of Trust Funds invested, and by only half a year's interest on £1,000,000 floated in July, 1891, being chargeable to the financial year.

Interest on loans for different works. 407. The annual interest on the public debt, as it existed at the end of the financial year 1890-91, was equivalent to an average rate of just £4 per £100, the average rates on the amounts borrowed for the different works varying from  $3\frac{1}{2}$  to  $4\frac{1}{3}$  per cent. No money has been borrowed at 6 per cent. since 1866; and the 5,  $4\frac{1}{2}$ , 4, and  $3\frac{1}{2}$  per cent. loans floated since, together with the substitution of 4 and  $3\frac{1}{2}$  per cent. debentures and stock for the 6 per cents. which had become due, have gradually brought down the rate of interest, so that at the end of 1890-91 it averaged only 4 per cent. as just stated. The following are the particulars of the amounts borrowed for the different works, and the annual interest and average rate of interest thereon:—

^{*} Inclusive of £18,280 on debentures held by the Government. See Note supra.

Total	•••	43,610,265	1,745,449	4.00

408. By the last two tables it appears that, on the debt as it stood Interest at the end of 1890-91, the total amount accruing annually as interest and paid. is £1,745,449; but as interest (£18,280) on debentures held by the Government was not paid, and as some of the interest which accrued (on that portion of the debt which was not in existence during the whole of the year,) was not payable until the ensuing year, the amount actually paid in 1890-91 was only £1,620,776, viz., £1,563,783 in London, and £56,993 in Melbourne.

409. The real burden of the debt is ascertained by finding how interest much of the interest is not covered by the net profits arising from recouped those public works on which the loan moneys have been expended, and has therefore to be provided for by taxation, land revenue, etc. Thus, in 1890-91, although the interest which accrued on the public debt of Victoria amounted to £1,672,816,‡ it was only necessary to provide for £416,681, or about 25 per cent., by taxation, etc., the remaining 75 per cent. being derived from public works of a repro-The following is a statement of the sources from ductive character. which the interest was defrayed:—

from repro-

^{*} See also footnotes to table following paragraph 396 ante.

This is inclusive of £183,900, amount outstanding on the Melbourne and Hobson's Bay United Railway Company's debentures, the interest on which is £9,195 annually.

The actual amount paid was £1,620,776, and the annual interest on the debt as it stood at the end of the year was £1,745,449. See last paragraphs.

Expenses of paying debt.

411. The payment of interest in Melbourne is not attended with interest on any expense; but in connexion with the payment of interest in London expenses are incurred, consisting chiefly of premium on the remittance of money and commission to the Banks. These charges amounted in 1890-91 to £26,108,† which is equivalent to a proportion of  $1\frac{2}{3}$  per cent. on the total amount paid in London, viz., £1,563,783, as just stated; as compared with £24,400, or  $1\frac{2}{3}$  per cent, in 1889-90, and £20,518, or  $1\frac{1}{2}$  per cent., in 1888-9. During the last five years the

^{*} The actual amount paid was £1,620,776, and the annual interest on the debt as it stood at the end of the year was £1,745,449. See last two paragraphs.

[‡] Including £153 arrears.

^{\$} Exclusive of £2,125 commission of  $\frac{1}{4}$  per cent. on redemption of debentures referred to in next paragraph. See under head of "Public Debt," page 203 ante.

Interest and expenses of debt, 1860 to 1890-91.

414. The following is a statement of the total amount, and amount per head, paid for interest and expenses of the public debt in 1860, and in each fifth year from that period to 1889-90 and 1890-91; also in each of the same years, the proportion such interest and expenses bore to the general revenue of the colony. It will be observed that, although the total amount and amount per head have been gradually increasing, the amount in proportion to revenue has fallen off considerably since 1879-80:—

Interest on debt in Australasian colonies and elsewhere.

415. In the other Australasian colonies, in 1890, the interest and expenses of the public debt per head varied from £2 19s. 1d. in Queensland, £2 12s. 10d. in New Zealand, and £2 7s. 7d. in South Australia, to £1 14s. 5d. in New South Wales, £1 11s. 2d. in Tasmania, and £1 4s. in Western Australia; whilst the proportion to the total expenditure varied from 40 per cent. in New Zealand, and about 30 per cent. in Tasmania, Queensland, and South Australia, to 20 per cent. in New South Wales, and only 14 per cent. in Western Australia.* In the Australasian colonies as a whole, the interest and expenses of the public debt in 1890 amounted to £7,257,680, or to nearly £1 19s. per head, and to nearly a fourth of the total expenditure.

Interest on debt-to total expenditure.

416. The following table contains a statement of the amount of Proportion interest payable annually on the Public Debts of various countries, also the proportion that such interest bears to the total expenditure of each country. The countries are arranged in order according to the proportion referred to:

^{*} See Australasian Statistics for 1890, Table V., Appendix A., Vol. II., Victorian Year-Book 1890-91. For later information see Appendix A. in the second volume.

417. According to the table the only countries in the world in Relation which the relation of the Public Debt to the Public Expenditure is smaller than in Victoria are Prussia, Norway, Germany, and Switzerland. So far as the German Empire is concerned, the result might be different if the indebtedness of the several German states was taken New Zealand, it will be observed, stands near the head into account. of the list, having only two countries above it; and all the other Australasian colonies, except Western Australia, occupy a higher and consequently worse position than Victoria.

and other countries

418. During the four years ended 31st December, 1891, five new Loans authloans were authorized, amounting altogether to £16,750,000, of which to 1891. £16,000,000 was to be floated in London and £750,000 in Melbourne;

† The figures for the Australasian colonies, which relate to the year 1890, express the expenses, in addition to the interest, of their Public Debts, except in the case of Queensland.

‡ The interest on the debts of the several German States is not included.

^{*} Taken, so far as European countries are concerned, from the Statistical Journal of Paris, for August, 1889, page 274. The amounts are there given in francs, which have been reduced to pounds sterling, on the assumption that £1 is equivalent to 25 francs.

the whole, with the exception of £850,000 to provide for the redemption of a loan falling due on 1st January, 1891, to be devoted to the construction of railways and waterworks (including irrigation works). The total amount raised to the 30th June, 1891, was £10,108,983, leaving a balance to be floated of £6,641,017, viz., £6,000,000 in London and £641,017 in Melbourne. The latter was to be issued when required as 4 per cent. stock similar to that already in existence; the former as  $3\frac{1}{2}$  (or 4) per cent. inscribed stock, redeemable at any time after 30 but before 35 years from date of stock,* upon twelve months' notice being previously given to the stockholders by advertisement in the London Gazette and in the Times newspaper published in London. The following table shows the amounts authorized to be devoted to the respective purposes for which these loans were to be raised:—

LOANS AUTHORIZED, 1888 TO 1891.

Treasury Bonds. 419. In addition to the amounts shown in the last table, authority was obtained in 1890 and 1891 to issue Treasury bonds in London as a temporary expedient—the time not being favourable for floating the balance of the regular loans authorized as above specified. Under Act 54 Vict., No. 1186, an amount of £1,000,000 was authorized to be raised from time to time as required, for terms not exceeding six months, but repayable without interest, on or before the 31st December, 1891. And under Act 55 Vict., No. 1233, another issue of £2,000,000 was authorized, in anticipation of a loan to be floated under Act 55 Vict., No. 1217, such issue to be made in 1892, to bear interest at a rate not exceeding  $4\frac{1}{2}$  per cent., and to be repayable on

^{*} The 1st January, 1891, was subsequently fixed as the date of commencement for both loans.
† The amount originally authorized was £4,600,000, but as £1,600,000 was subsequently raised under the authority of Act No. 1196, it is included thereunder.

[‡] Stock to be issued in Melbourne. § Including £1,000,000 floated in July, 1891.

the 31st December, 1893. The former were required merely as security to the Banks for a temporary advance, which was actually repaid before the expiration of three months, and were not issued to the public. Of the latter, £1,000,000, at  $4\frac{1}{2}$  per cent., was disposed of on the 2nd March, 1892, under an agreement made with the New Zealand Loan and Mercantile Agency Company. The gross proceeds averaged £100 19s.  $2\frac{1}{4}$ d., but from this must be deducted £1 15s.  $3\frac{1}{2}$ d. for accrued interest, and 2s. 6d. for expenses (stamp duty only), so that the net proceeds averaged only £99 1s.  $4\frac{3}{4}$ d., being equivalent to a par loan at 5 per cent.

420. The remaining portion of the loans authorized prior to 1891 Loan floated to be raised in London, amounting to £3,000,000—the interest being fixed at  $3\frac{1}{2}$  per cent., and the principal redeemable, after due notice, at any time between the 1st January, 1921, and the 1st January, 1926 was offered on the 13th April, 1891, at a minimum price of £97 10s., being equivalent, after allowing for accrued interest and deferred payments from the 1st January, to £96 2s. 8\frac{1}{4}d. per £100 stock. The number of tenders was 352, but only £2,000,000 was applied for, and so the balance was withdrawn. The average price obtained was £97 11s. 4d., or £96 4s.  $2\frac{1}{2}$ d. ex accrued interest; whilst, if expenses of floating be also deducted, the net proceeds will be found to have averaged only £95 1s.  $3\frac{3}{4}$ d. As the loan is redeemable after 30 years' currency, the real rate of interest at which the money was obtained is equivalent to £3 15s. 6d. for every £100 actually received. Subsequently, on the 15th July, the balance was disposed of specially at an average price of £96 5s., or of £96 2s. 3\frac{3}{4}d. ex accrued interest; whilst the net proceeds averaged £94 19s.  $9\frac{1}{2}d$ ., the money being obtained at the rate of £3 15s. 7d. per £100.*

421. The principal feature in connexion with Australasian borrow-Failure of ings in 1891 is the partial failure, in the first instance, in the floating of three consecutive loans, one of South Australia in February, one of offered in 1891. Victoria in April, and one of Queensland in May. Only once before during the last 20 years did such an event happen in the case of Victorian borrowings, viz., in January, 1883, when only £600,700 out of the £4,000,000 offered was taken up by the public; the balance, however, being successfully disposed of two months later. following are the amounts offered and tendered in the case of the recent unsuccessful Australian loans:—

Australian

^{*} On the 29th June, 1892, a further loan for £2,000,000—similar in all respects to the previous one—was offered in London at a minimum of £92; the amount tendered was £2,476,100, and the average price obtained was £92 1s. 5d., or £91 13s. 9d. ex accrued interest, or about £90 10s. 9d. ex interest and expenses—the rate of interest payable, nominally  $3\frac{1}{2}$  per cent., being equivalent to £4 1s. 5d. per £100.

Unsuccessful Flotation of Australasian Loans in London,  $1891 \ (3\frac{1}{2} \ \text{per cent. Loans}).$ 

Colony.	When Offered.	Mini- mum Price Fixed.	Amount Offered.	Amount Tendered.

Causes of failure in floating loans in 1891.

422 In the years 1888, 1889, and the first half of 1890, all the Australasian colonies, but especially Victoria and New South Wales, were able to borrow on exceptionally favourable terms, and every loan offered was readily disposed of, and consequently the sudden failure of the issues in 1891 came rather as a surprise. Although some of the London financial journals took the opportunity of denouncing the policy of these colonies in regard to their persistent borrowings on a large scale—to which they chiefly attributed the failures—yet a close examination of the surrounding circumstances only confirms the view expressed by some other journals that the failure of the Victorian loan was immediately due to the depressed condition of all high class securities in anticipation of an immediate rise in the bank rate, and generally to the unsettled state of the London finances since the latter half of 1890. Two or three months previously (in July and August) a collapse, accompanied by disturbances of a revolutionary character, took place in the Argentine Republic, and in the November following a crisis occurred in London seriously involving the credit of several of the leading banking houses, which was only maintained by the timely aid of the Bank of England. Nevertheless the price of all high class securities was seriously affected, the price of Consols having fallen to 93\frac{3}{8} on the 14th November, 1890, although the minimum price touched in the two preceding years was  $96\frac{1}{2}$  and  $99\frac{1}{8}$  respectively, and even about the time of floating the Victorian loan they were quoted as low as The losses recently sustained by British speculators and investors in Argentine and other South American securities amount, it is alleged, to between £50,000,000 and £100,000,000, and hence it is reasonably inferred that in order to cover such losses it became necessary to realize on a large quantity of high class securities.‡

^{*} The balance of £1,000,000 was taken up on the 7th July following, at £97 10s., on terms of the original prospectus, plus interest to date.

[†] The balance was disposed of in June at about £90, previous subscribers to be placed on equal footing.

‡ See also last edition of this work, Volume I., paragraph 248.

Since then the prices of Australian stocks have partially recovered, evidence of which will be found in the quotations given in a later portion of this work.*

423. The following is a statement of the leading particulars of the Net prolast three loans floated in London, to which is added, in the last line, loans. a statement of the Bank of England minimum rate of discount at the time of floating each loan:—

Note.—The quotations in this table are exclusive of accrued interest, which was £1 7s. 1d. and 2s. 8½d. respectively for the last two loans.

424. The total expenses connected with floating Victorian loans Expenses of from 1855 (the time the first loans were authorized) to 30th June, redemption 1891, including bank charges, brokerage, advertising, etc., have

floating and of loans.

¶ Two days later it fell to  $3\frac{1}{2}$  per cent., and nine days later to 3 per cent. A 5 per cent. rate prevailed in the early part of the month, i.e., prior to the 10th. ** It fell on the same day to 3 per cent. A 4 per cent. rate prevailed about a week previously.

^{*} Part "Accumulation," post.
† For particulars of a still later loan, see footnote on page 285 ante. ‡ By Act 54 Vict. No. 1057, the second issue was made redeemable at the same date as the first issue.

[§] Wholly or partly successful. | If allowance be also made for premiums received and discounts paid on exchange operations, the expenses of the loan of 1889 would be reduced by about 1s. 10d. per £100, whilst that of 1890 would be increased by about 2s.  $0\frac{1}{4}$ d.

amounted to £572,889, which figures furnish a proportion of 1·148 per cent. (equal to £1 2s.  $11\frac{1}{2}$ d. per £100) on the gross amount (£49,914,000) borrowed in London to that date; a not widely different average prevailed for the loans recently floated, as will be seen by figures in the last table. These expenses are made up of 5s.* per £100 commission to the Banks for floating, 5s. brokerage, and 12s. 6d. composition duty on inscription of stock, payable to the British Government; the balance, viz., 5½d., defraying the cost of advertisements and other charges. It should be mentioned that there are other charges which, as they do not come into operation until the debentures arrive at maturity, are not usually taken into account. These are the Banks' commission (including brokerage) of ½ per cent. for floating the earlier debenture loans, and  $\frac{1}{8}$  per cent. for the more recent inscribable loans, besides exchange on remittances for redemption of the debentures. In January, 1891, a commission of ½ per cent. was paid the Banks on the redemption of a loan of £850,000.

Prices fixed and obtained for loans.

425. The minimum price for tenders for a loan is fixed after due inquiry from those supposed to be best acquainted with the state of the money market. The results, however, are very various, and in the case of the loans from 1874 onwards the amounts obtained per £100 debenture or stock have ranged from 1s. 4d. in 1891 to as much as £4 11s. in 1888 above the minimum fixed, as is shown in the last column of the following table:—

VICTORIAN LOANS.—PRICES FIXED AND OBTAINED, 1874 TO 1891.

‡ Conversion loans. See footnote (§) on last page.

§ The first three of these loans were issued as depentures, with right of inscription as stock.

|| Redemption loans.

** Money market much affected at time of issue of this loan by a misunderstanding with Russia,

and the supposed probability of war with that country.

†† Repayable at any time between these dates at option of the Government after giving twelve months' previous notice.

^{*} The loans referred to in the first seven lines have been paid off by means of more recent loans.
† For loans raised prior to 1876, the expenses have been uniformly assumed to have been 1.15 per cent. See paragraph 424 ante.

It is believed that a higher price by fully 5s. per £100 would have been obtained but for the unusual occurrence of the shipment of large quantities of gold to Australia, which took place just prior to the loan being floated.

^{‡‡} Including £957,000 for conversion of debentures and stock issued in Melbourne; also £817,220 for redemption of loans falling due in Melbourne; such amounts being virtually transfers of debt from Melbourne to London.

428. It will be noticed that the nominal rate of interest was 6 per Terms upon cent. for all loans floated prior to 1869, when it was reduced to 5 per have been cent.; it was further reduced to 4 per cent. in 1874, which rate has, with exceptions in 1879 and 1880, prevailed until 1889, when a  $3\frac{1}{2}$  per cent. loan was floated. It will be seen that the first 4 per cent. loan was floated at a heavy discount, viz., 10 per cent., but the credit of the colony has improved so considerably of recent years, especially since 1885, that a 3½ per cent. loan, floated at the beginning of 1889, brought a premium of £2 15s. per £100 debenture, although similar loans in later years were not so successful. It should be stated, however, that after the Victorian loan of 1888 was floated, a large advance took place in the value of Australian securities, owing probably for the most part to the conversion of British 3 per cents., and the possibility that English trustees might sooner or later be allowed to invest in colonial securities, in consequence of which no less than five of the Australasian colonies—viz., New South Wales, Queensland, Victoria, South Australia, and Tasmania, in the order named—have already been able to float  $3\frac{1}{2}$  per cent. loans, either at a premium or at a small discount.

- 429. By the last column but one of the table, it appears, in respect Actual rate to the earlier Victorian loans, that, although the nominal rate of of interest on loans. interest was 6 per cent., the money was usually obtained for about  $5\frac{3}{4}$ per cent, the lowest rate being  $5\frac{1}{2}$  per cent. in 1859, and the highest a small fraction over 6 per cent. in 1866. Since that year, however, the credit of the colony has been gradually improving, for the money was secured in 1870-or four years later-for about 5 per cent.; in the early part of 1883 for  $4\frac{3}{20}$  per cent.; in 1885 for  $4\frac{1}{8}$  per cent.; in 1888 for about  $3\frac{5}{8}$  per cent.; in 1889 for less than, and in 1890 for a little over,  $3\frac{1}{2}$  per cent.—the former being the lowest actual rate at which any Victorian, or, in fact, any Australasian, loan has yet been raised. In 1891 there was a temporary reaction, for the money could only be obtained for a little over  $3\frac{3}{4}$  per cent., whilst in the early portion of 1892 the depression of high-class securities was so great that it was at first deemed inadvisable to apply for further permanent loans until affairs should resume their normal condition; and when a loan was raised in June the money could only be obtained at over 4 per cent.
- 430. The following table, giving similar information respecting the New South loans of New South Wales since 1880, has been compiled in the office of the Government Statist, Melbourne, from official documents. Prior to 1881, the actual rate of interest exceeded 4 per cent.; and prior to 1872 it exceeded 5 per cent.*:—

Wales loans

^{*} For particulars of the earlier loans, see last issue of this work Vol. I., paragraph 256.

Success of recent Wales loans.

431. By this table it appears that during the ten years ended with New South 1891, New South Wales has floated loans amounting in the aggregate to £36,500,000, of which, however, about £3,000,000 was for the redemption of maturing loans. The loan of 1882 was issued in the form of debentures, but with the right of inscription as stock; whereas all previous loans were issued as debentures only, whilst all subsequent ones were issued either as inscribed stock or debentures inscribable as stock. It would appear that as early as 1881 New South Wales was able to borrow, allowing for all charges, for less than 4 per cent.—the loan floated in 1881 being set down as costing only £3 17s. 6d. per £100 net proceeds per annum, although on three subsequent occasions that colony had to pay more than 4 per cent. The last six loans, it will be observed, were launched nominally at 3½ per cent.; New South Wales being the first Australasian, and the second outlying British possession, § except India, to issue loans bearing a lower nominal rate of interest than 4 per cent. The actual rate of interest payable on the first three and on the last of these, however, was nearer 4 than  $3\frac{1}{2}$  per cent. on the net proceeds; but the two last but one were floated either above or slightly below par. The earlier

^{*} Debentures unconverted into stock.

[†] Redemption loan.

¹ Issued privately in exchange for debentures falling due in 1891 and 1892.

[§] The first was Canada. See paragraph 433 post.

of these two loans was, at the time, the most successful Australian loan floated, its great success being no doubt attributable to the extraordinary demand for Colonial securities in the London money market, owing to a great extent to the then proposed, and since accomplished, compulsory conversion of the greater portion of the British 3 per cent. debt into  $2\frac{3}{4}$  per cents.—eventually to be reduced to  $2\frac{1}{2}$  per cents.; but this was subsequently, in its turn, eclipsed by the Victorian  $3\frac{1}{2}$  per cent. loan of 1889.

432. All the Australasian colonies, except Western Australia, now Loans of float their loans at  $3\frac{1}{2}$  per cent. as the nominal rate of interest, New South Wales having been the first to initiate the change as early as 1884. The most successful of these loans was the Victorian loan raised early in 1889, when the money was secured at the rate—based on the price realized ex interest—of only £3 7s. 4d. per £100 actually received; and next to this was the New South Wales loan of April, 1888, which was at the rate of £3 8s. 1d. per £100. By 1891, however, a reaction set in against the colonies, from causes already explained, and in that year Victoria and New South Wales had to pay £3 14s. 2d. and £3 16s. 8d. respectively for every £100 actually received. The following are the particulars of the loans raised since 1887:-

Loans of Australasian Colonies Raised in 1888 to 1892.

Note.—New South Wales also issued in January, 1892, in London, 4 per cent. Treasury bonds of four years' currency, for £1,250,000, at an average of  $99\frac{1}{2}$  (gross) per £100; and Victoria, in March, 1892,  $4\frac{1}{2}$  per cents. of two years' currency, for £1,000,000 at £100 19s. 2d. gross, or £99 3s. 11d. ex accrued interest; whilst South Australia issued in April, 1892, in Adelaide, bonds amounting to £350,000 of five years' currency, bearing interest at the rate of £4 11s. 3d. per cent.—i.e., 3d. per £100 per diem—(payable quarterly). Victoria also floated a further  $3\frac{1}{2}$  per cent. loan for £2,000,000 on 29th June, 1892, at £91 13s. 9d. ex accrued interest, equivalent to a yield to investor of £3 19s. 10d. per £100. See footnote to paragraph 420 ante.

Loans of other British dominions.

433. Of all the dependencies of the United Kingdom, India can borrow on the most favourable terms, its 3 per cent. Stocks closely resembling and ranking next to British Consols; but only once, viz., in April, 1889, did India succeed in floating a 3 per cent. loan at a premium. Canada and Ceylon are the only other British dependencies which have issued 3 per cent. bonds; but the latter colony succeeded in issuing only a small amount at that rate, whilst Canada only once previously floated a loan below 4 per cent., viz., at 3½ per cent. in 1884, two loans floated subsequently being at 4 per cent. The actual interest on the 3 per cent. Canadian loan averaged £3 4s. 3d. per £100 of the proceeds, as compared with £3 7s. 4d. for the cheapest Australian loan—raised in 1889—and with £3 2s. 10d. for the latest Indian loan, raised three years later; the success of the Canadian loan was probably attributable not only to a favourable market but also to the circumstance that that colony is only a moderate borrower; it was, however, the first Canadian loan

^{*} The actual interest on the net proceeds (i.e., after deducting expenses) of the the last four Canadian loans were as follow: -4.23 (for  $3\frac{1}{2}$  per cents.), 4.08, 4.10, and 3.27 per cent. respectively.

§ For particulars of the amounts raised for several of the years, see tables following paragraphs 427,430, and 432 ante.

Debenture loans, on which the Stamp Duty payable is less by ten shillings per £100 than on ** Average. Stock. ¶ No loans raised in these years.

[†] The amount offered was £450,000, the balance being withdrawn. ‡ Repayable at option of the Government at any time between the periods shown.

Annual cost of managing stock of Victoria and New South Wales.

435. The annual charge per million made by the Bank of England for the inscription and management of the stock of New South Wales is £600 for the first ten millions, and £500 for the second ten millions; whereas the annual charge per million made by the London and Westminster Bank for the same services rendered to the Government of Victoria is only £500 for the first ten millions, £450 for the second ten millions, and £400 for subsequent amounts.

Debts of Australasian colonies. 436. The following table shows the total amount of debt, and the indebtedness per head, in Victoria and the other Australasian colonies on the 31st December of every fifth year from 1875; also of the three years 1888, 1889, and 1890; also the number of years' revenue the debt was equal to in each of those years:—

Note.—For public debts of the respective colonies at the end of 1891, see Summary of Australasian Statistics (third folding sheet at the commencement of the second volume), which gives a statement of the debts of the respective colonies at the end of each of the nineteen years 1873 to 1891; also table following paragraph 432 ante, and Appendix A. to the second volume.

437. In 1890, as compared with the previous year, Western Order of Australia and New Zealand show a decrease of indebtedness per head, and New South Wales only a slight increase, but an increase varying from less than £2 to £9 per head occurred in the other colonies. According to the returns of the same year, by far the most heavilyindebted colonies in proportion to population were Queensland with about £72, South Australia with about £66, and New Zealand with £62 per head. Victoria, in proportion to population, was little more than half as heavily indebted as any of these, and was, moreover, less heavily indebted than any other of the Australasian colonies, except Western Australia. The following is the order in which the colonies stood in respect to their indebtedness per head, the most heavily indebted colony being placed first:-

colonies in respect to indebted-

^{*} Calculations revised since last publication, in accordance with amended estimates of popula-

[†] New Zealand has, as a set-off against the debt, an accrued sinking fund, which amounted on the 31st March, 1891, to £1,473,193. The net liability was thus £37,359,157, or £59 14s. 6d. per head, being equal to 9 times the revenue. The sinking funds in the other colonies are of no great importance.

# ORDER OF COLONIES IN REFERENCE TO AMOUNT OF INDEBTEDNESS PER HEAD.

- 1. Queensland.
- 2. South Australia.
- 3. New Zealand.
- 4. Tasmania.

- 5. New South Wales.
- 6. Victoria.
- 7. Western Australia.

Order of colonies in respect to proportion of revenue to debt.

438. The public debts of the different colonies varied, in 1890, from an amount equal to  $9\frac{1}{4}$  years' revenue in New Zealand, and more than 8 years' revenue in Queensland, Tasmania, and South Australia, to a sum equal to  $3\frac{1}{3}$  years' revenue in Western Australia. Victoria occupied a lower, and consequently more favourable, position in this respect than any of the colonies except Western Australia, her debt being equal to her revenue for less than 5 years. The following is the order in which the colonies stood in respect to this matter:—

# ORDER OF COLONIES IN REFERENCE TO PROPORTION OF REVENUE TO PUBLIC DEBT.

- 1. New Zealand.
- 2. Queensland.
- 3. Tasmania.
- 4. South Australia.

- 5. New South Wales.
- 6. Victoria.
- 7. Western Australia.

Public debt of Australia and Australasia.

439. If the amounts of debt at the latest period shown in the table be added together, it will be found that the aggregate debt of the colonies on the continent of Australia was  $140\frac{1}{2}$  millions, being nearly 9 millions more than in 1889; and the aggregate debt of Australia, with the addition of Tasmania and New Zealand, somewhat exceeded  $185\frac{3}{4}$  millions sterling, being over  $10\frac{1}{2}$  millions more than in 1889. The following are the exact figures for 1890, also the proportion of indebtedness per head of the population, and the proportion the aggregate debt bore to the aggregate revenue of the colonies within the same limits:—

# Public Debt of Australia and Australasia, 1890.*

	PUBLIC DEBT.		
•	Total Amount.	Amount per Head.	Multiple of Revenue.
Continent of Australia  Ditto with Tasmania and New Zealand	£ 140,493,177 185,758,327	£ s. d. 46 12 1 49 1 6	Per cent. 5.79 6.36

^{*} For later figures, see Appendix A. in the second volume.

440. It will be observed that a combination of the indebtedness of Debt per the insular colonies with that of the colonies upon the Australian in Australcontinent gives a proportion of debt per head higher by about £2 10s. Australia. than such a proportion applied to the continental colonies alone, in explanation of which it will be remembered that, although in proportion to population, Tasmania's indebtedness is somewhat below the average, New Zealand is one of the most heavily indebted colonies of the group.

441. During the year 1890, the public debt of Australasia, taken Increase of as a whole, increased by  $10\frac{1}{2}$  millions, or 6 per cent., and the amount Australasia per head of population by £1 10s. 7d. During the fifteen years ended years. with 1890, the public debt increased by one hundred and thirty-one millions—or more than threefold, whilst the proportion per head nearly doubled. The debt also increased in a much greater ratio than the public revenue, for whereas in 1875 it was equal to the income of the colonies for less than four years, in 1889 and 1890 it was equal to their income for over six years. This is shown by the following figures:—

INCREASE OF PUBLIC DEBT OF AUSTRALASIA, 1875 TO 1890.

Year.				Public Debt of Australia, Tasmania, and New Zealand.

442. The purposes for which the public debts of the Austral-Classificaasian colonies were incurred may be classified under three heads— (1.) Works yielding direct revenue, including all immediately reproductive works, such as railways, telegraphs, waterworks, harbour and river improvements, etc.; (2.) Other works of a permanent character not returning direct revenue—including roads and bridges, defence works, school buildings, and other public works and buildings;

debts of Australasian colonies.

^{*} In 1875, the population was 2,327,882; in 1880, 2,721,747; in 1885, 3,287,363; in 1888, 3,595,350; in 1889, 3,684,016; and in 1890, 3,785,349.

(3.) Miscellaneous—including introduction of immigrants, amounts borrowed to cover deficiencies in revenue, and amounts unapportioned to their proper heads. In the following table the debt of each colony is classified under these three heads:-

## PURPOSES FOR WHICH PUBLIC DEBTS OF AUSTRALASIAN COLONIES WERE INCURRED.

(Amounts outstanding on the 31st December, 1890.)

Note.—The amounts set down are inclusive of Treasury Bills, viz.:—£2,373,884 for New South Wales, £750,000 for South Australia, and £403,850 for Tasmania.

§ In Queensland the expenditure on "School Buildings" is included with "Other Public Works," and in South Australia the amount set down includes expenditure on other buildings.

|| Including £1,265,588, loans to local bodies, chiefly for waterworks, roads, and bridges. In New South Wales the amount under this head was expended on public works on behalf of Queensland, when it formed part of New South Wales; in South Australia on general public works for the Northern Territory; in New Zealand on land purchases (presumably from the Maoris), £1,196,479, and rates on native lands, £58,014, etc. From the amount returned for Tasmania, debentures redeemed, amounting to £99,800, have been deducted, since the purposes were not

specified for which the original loans thereby paid off were raised.

** Including the old provincial loans of New Zealand raised prior to the abolition of provinces in 1876, and loans not accounted for, as well as the unspent balance of loan moneys; also £1,021,472

for charges and expenses of raising loans. See also footnote (*) supra.

†† As a set-off against the public debt, New Zealand possessed an accrued sinking fund amounting, on the 31st March, 1891, to £1,473,193; the net liability for that colony was, therefore, £37,359,157. The sinking funds possessed by the other colonies are comparatively small, consisting of the following amounts:—Victoria, £156,000; Western Australia, £85,106; and Tasmania, £124,804.

^{*} The figures set down as showing the objects for which the Public Debt of New Zealand was contracted represent the net expenditure out of the "Public Works Fund" since 1870—the date of the first Immigration and Public Works Loan—which is the only existing record of the loan expenditure; it is, however, stated that, besides loan moneys, receipts in aid from Stamp duties, etc., contributed somewhat towards the total sum so expended. The balance required to make up the total debt at the end of 1890 has been entered as "unapportioned."

† The amount for "Roads and Bridges" is included with that for "Harbours, etc."

‡ In New Zealand a portion of the expenditure on "Defences" is included under the head of "Harbours, etc.," and a portion is under the head of "Other Services."

§ In Queensland the expenditure on "School Buildings" is included with "Other Public

443. The major portion of the public debt of each of the Austral-Purposes for asian colonies was contracted for the purpose of railway construction, of Australbut smaller amounts were borrowed for water supply, immigration, asian colonies electric telegraphs, harbour and defence works, roads and bridges, were contracted. school-houses, and other public works. Up to the end of 1890, New South Wales and Victoria had borrowed a larger amount for railway construction than any other colony, the amount being over £32,000,000 in both cases, as against £16,400,000 borrowed for the same purpose by Queensland, over £14,000,000 by New Zealand, and nearly £11,400,000 by South Australia. Victoria has borrowed more for water supply than any other colony, the total amount being £6,500,000, as against £4,600,000 borrowed by New South Wales, and £3,300,000 borrowed by South Australia for the same object. No portion of the public debt of Victoria, South Australia, or Western Australia has been contracted for the promotion of immigration, but up to the end of 1890 Queensland and New Zealand had borrowed over two and a half and over two millions respectively for immigration purposes, whilst New South Wales and Tasmania had borrowed considerably smaller sums.

444. Ninety-five per cent. of the Victorian public debt was order of incurred for the purpose of being expended upon revenue-producing public works, which is a larger proportion than in any of the other colonies. This is shown by the following figures, which give the proportion so incurred in each colony:—

colonies in respect to borrowings for productive works.

## ORDER OF COLONIES IN REFERENCE TO PROPORTION OF DEBT INCURRED FOR REPRODUCTIVE WORKS.

	Per Cent.		Per Cent.
1. Victoria	94.98	5. Tasmania	$78.35$
2. New South Wales	84·18	6. Queensland	68.60
3. Western Australia	83.76	7. New Zealand	41.60*
4. South Australia	80:00	•	

445. Of the total amount borrowed by the colonies on the Aus-Purposes for tralian continent to the end of 1890, over four-fifths was for railways and other reproductive works, 8 per cent. was for other works of a permanent character, and, with the exception of  $3\frac{1}{4}$  per cent., which was unappropriated, the balance was spent chiefly on immigration. Of the amount borrowed by the continental and insular colonies combined, the proportion for reproductive works is considerably less, but the proportions for roads, immigration and other purposes are

which debt of Australasia was contracted.

^{*} The purposes for which a large portion of the New Zealand debt was incurred cannot now be determined. See last footnotes on preceding page.

somewhat more than those for like objects relating to the continental colonies alone. This is shown in the following table:—

Public debts of British dominions

446. The next table shows the amounts of public debt in Great Britain and her various possessions at latest dates, so far as the information can be gathered from official documents existing in this colony, also the amount of debt per head of the population of each possession, and the number the revenue of each would have to be multiplied by in order to make an amount equal to its debt. All the calculations have been made in the office of the Government Statist, Melbourne:—

^{*} For population of Great Britain and the various colonies, see Part "Population," ante.
† For revenue of Great Britain and the various colonies, see table following paragraph 328, ante.
‡ Gross debt. The net debt, after deducting loans recoverable, nominal value of Suez Canal Shares, and Bank Balances, was £674,310,684.
§ Gross liability. The net liability, after deducting "interest bearing investments, loans, cash, and banking accounts," was only £49,486,086.

| For public debts and amounts per head and proportion of debt to revenue in the various Australasian colonies, see table following paragraph 436 ante.

Indebtedness of **British** dominions.

447. It will be observed that the total indebtedness of Great Britain and her dependencies reaches to about 1,180 millions sterling; that 686 millions, or nearly three-fifths, of this amount is owing by Great Britain herself;  $211\frac{1}{2}$  millions by India, or upwards of a fifth; 1853 millions, or less than one-sixth of the whole, by the Australasian colonies; and the remainder,  $96\frac{1}{2}$  millions, by Canada, the Cape of Good Hope, and other British colonies.

Indebtedness per head of British dominions.

448. In Australasia, taken as a whole, the indebtedness, in proportion to population, is more than two and three-quarter times as large as that of the United Kingdom, which in this respect is far above any of its other dependencies. As regards individual colonies, the indebtedness per head of Queensland is four times, and that of New Zealand and South Australia is about three and a half times, as large as that of the United Kingdom; whilst that of New South Wales and Tasmania is nearly two and a half times, and that of Victoria is about twice, as large. The three first-named colonies are, in proportion to population, by far the most heavily-indebted countries in the world. It may be observed that the indebtedness per head of Canada is only a fourth of that of Australasia.

Proportion of debts to **British** 

449. In proportion to revenue, the debt of the United Kingdom is revenues of larger than that of any of her dependencies, except New Zealand, dominions. Queensland, Tasmania, and South Australia; but with the exception of the United Kingdom and Canada, there is no portion of the British dominions in which the debt is so high a multiple of its revenue as the united debts of the Australasian colonies are of their united revenues.

Increased indebtedness of British

450. During the year 1890 the public indebtedness of the British dominions increased by £14,000,000, notwithstanding a reduction of dominions. 4 millions in the debt of the United Kingdom. An increased amount of nearly five millions was borrowed by India, and  $10\frac{1}{2}$  millions by Australasia.

National debt of United Kingdom, 1890-91.

451. At the end of March, 1891, the National Debt of the United Kingdom stood in round numbers at 686 millions, the various denominations of the debt will be found in the following table:-

NATIONAL DEBT OF THE UNITED KINGDOM, 31st MARCH, 1891.

Denomination.	Total Amount of National Debt.	Amount of Debt held by Government Departments (included in previous column).
FUNDED DEBT—	£	£
New $3\frac{1}{2}$ per Cents	225,746	5,935
23 per Cents. Cons. Stock (Goschen's)	527,999,915	96,988,850
$2\frac{3}{4}$ per Cents. (1905)	4,647,799	768,372

Societies Accounts		•••
Russian-Dutch Loan	519,940	
Under Imperial Defence Act 1888	797,780	•••
Total Debt	685,954,018	181,065,504

Note.—The information in this table has been taken from Burdett's Official Intelligence, 1892, page 76.

452. A gradual but continuous diminution has taken place in the British national indebtedness of the United Kingdom, this reduction in the Debt, 1857 last 33 years having apparently amounted to nearly  $145\frac{1}{2}$  millions sterling.* The decrease from period to period is shown by the following figures, which indicate the amount of the debt at the end of various financial years:—

#### Public Debt of the United Kingdom, 1857 to 1890.

	Debt at the end of each Financial Year.‡						Debt at the end of each Financial Year.‡			
			£	ŗ			$_{*}$			
1857-8			831,532,535	1882-3		• • •	754,455,270

1872 - 3			779,222,110	1889-90			690,663,838			
1877-8			772,151,725	1890-91		• • •	685,954,018			

453. The public debts of Foreign countries at the latest dates are Public debts next shown, so far as the information is available. The calculations countries. as to the amount of indebtedness per head and the multiple of the revenue of each country have all been made in the office of the Government Statist, Melbourne:—

† Funded (including stock held on account of unclaimed dividends), unfunded, and capital value of terminable annuities in 3 per cent. stock, at par.

^{*} The actual reduction is not so great as this, as the practice has prevailed of late years of deducting the amounts borrowed for local reproductive works. It is known that sums amounting in the aggregate to £26,558,959 were so deducted in 1887-8, when a Local Loans Stock was created.

[‡] Financial year ends on the 31st March.

* For populations on which these calculations are based, see Part "Population," ante.

† This amount is made up of £277,614,000 general debt of the whole empire; £105,686,000, special debt of Austria proper; and £173,418,000, special debt of Hungary.

‡ Denmark has State investments amounting to £4,800,000, or nearly half the total debt; it has

also a Reserve Fund of £990,000 to meet sudden emergencies.

§ This amount is made up of the debt of the Empire, £53,991,894 (including Treasury Bills) in 1889-90, together with the debts—chiefly borrowed for railway construction—of the following States at the dates named, viz.:—Alsace-Lorraine, £1,262,922 in 1890; Anhalt, £107,850 in 1889; Baden, £16,184,430 in 1890; Bavaria, £65,531,805 in 1890; Bremen, £3,359,041 in 1889; Brunswick, £1,278,985 in 1890; Hamburg, £11,589,221 in 1890; Hesse, £1,747,201 in 1889; Lippe, £39,664 in 1889; Lübeck, £677,810 in 1889; Mecklenburg-Schwerin, £1,973,962 in 1890; Mecklenburg-Strelitz, £293,686 in 1889; Oldenburg, £1,841,243 in 1889; Prussia, £254,758,897 in 1890-91; Reuss-Greiz, £10,462 in 1889; Reuss-Schleiz, £50,932 in 1890; Saxe-Altenburg, £44,624 in 1890; Saxe-Coburg-Gotha, £200,653 in 1889; Saxe-Meiningen, £624,751 in 1889; Saxe-Weimar, £281,745 in 1890; Saxony, £31,712,526 in 1890; Schaumburg-Lippe, £24,963 in 1889; Schwarzburg-Rudolstadt, £209,060 in 1889; Schwarzburg-Sondershausen, £175,684 in 1890; Waldeck, £109,148 in 1890; and Würtemburg, £21,083,290 in 1890. A large proportion of the debts of the German States was contracted for the construction of railways. As a set-off against the "Debt of the Empire," there exist war treasure (in gold) and various invested funds amounting at end of 1889 to about £31,290,000. Deductions have been made where possible, so as to prevent sums being included twice over, thus appearing in both the Imperial and the State revenues.

|| This amount is made up of £14,417,337, debt of Sweden; and £6,408,757, debt of Norway. The above amount excludes the debts of the various Cantons, amounting in the aggregate to about £12,000,000. There exists, as a set-off against the debt, State property ("federal fortune") valued at £1,493,563.

** Consisting of foreign debt, £217,830,000, and estimated internal and floating debt, £75,000,000. Paper money estimated at £90,000,000 excluded.

†† Inclusive of a floating debt of at least £702,000.

11 Exclusive of £872,400 Government paper in circulation.

§§ Gross liability. The net liability after deducting the cash in the Treasury was £180,647,000. In addition to the Federal Debt, there were State Debts amounting to £44,621,500, or after deducting cash and funds in hand to about £17,000,000 (net debt).

454. The public debt of the United Kingdom is larger than that Gross of any other country in the world except France, which is the larger debt in by £580,000,000. Next to these countries in point of indebtedness are countries. Russia, Austria-Hungary, Germany, Italy, the United States, Turkey, Spain, and British India, in the order named. These are the only countries which have larger debts than the present united debts of the Australasian colonies.*

amount of

455. In proportion to population, the most heavily indebted inde- Amount of pendent countries are France and Portugal, which are, however, in head in this respect, far behind all the Australasian colonies.† The debt per head in the United Kingdom is much smaller than in Portugal and France, is also less than in Holland, but is larger than in any other country outside Australasia.

456. According to the table, Turkey is, with the exception of Peru Proportion -which appears to be irredeemably involved-very much more heavily of debt to revenue in indebted in proportion to its revenue than any other country. The countries. debts of those countries, and of Portugal, Egypt, France, Holland, and Spain, are all larger in proportion to their revenues than the debt of the United Kingdom* is to its revenue. The united debts of the Australasian colonies* are smaller in proportion to their united revenues than the debts of Greece, Brazil, Canada, Italy, or Belgium, as well as those of the countries previously so mentioned are to their respective revenues.

457. In comparing the indebtedness of the Australasian colonies Comparawith that of other countries, it cannot be too distinctly borne in mind debtedness that whereas the latter was in most cases mainly incurred for purposes of war, the former was, as already pointed out, almost entirely contracted for the construction of railways, water supply, and other works which aid materially in the opening up and development of the country. In Victoria, for example, the National Debt is about £38 per head; in the United Kingdom it is about £18. The interest on the Victorian debt, however, as has already, been shown, is largely provided for by the reproductive works on which the borrowings have been expended; but the debt of the United Kingdom is wholly unproductive; in other words the interest can only be raised by means of taxes. The railways alone of the United Kingdom-all constructed by private companies—cost £897,500,000, leaving out of account the cost of waterworks and the large amounts borrowed by local authorities for school buildings, sewerage works, harbours, etc.

^{*} See table following paragraph 446 ante.

[†] See table following paragraph 436 ante.

If this amount be added to the National Debt of the mother country, it would be increased to nearly £42 per head, or £4 per head more than the debt of Victoria. The debt of the United Kingdom, however, has been borrowed at less than 3 per cent., and as the railways pay more than that rate of interest, the addition of their cost to the debt would not add to the burdens of the people. In like manner so much of the debt of Victoria as has its interest covered by amounts derived from reproductive works may be considered to be non-existing. It is therefore evident that the gross amount of money borrowed does not afford a true indication of the indebtedness of a country, which cannot be ascertained without also taking into consideration the proportion expended on reproductive works. Even then the standard of comparison is not complete unless the respective debts bearing various rates of interest be reduced to a uniform interest basis. the following table both these elements are taken into account, the interest paid by the different countries being adjusted to a uniform basis of  $3\frac{1}{2}$  per cent. The comparative indebtedness will be found in the last column:—

COMPARATIVE INDEBTEDNESS PER HEAD IN VARIOUS COUNTRIES.

Note.—The figures, except those for the United Kingdom, Canada, and the Australasian colonies, which relate to the year 1890 or 1890-91, have been deduced from figures given in Fenn on the Funds (1889), 14th edition, pages xv. and xvii.

458. Victoria, it will be seen, is at the head of the list, ranking even before Canada and the United Kingdom, which stand next, the amount of real indebtedness per head there, or that for which interest must be provided by taxation or other special source of income, being

Low comparative indebtedness of Victoria.

lower than in any of the other countries named, and this, notwithstanding the nominal amount of its indebtedness per head is greater than that of any country outside Australasia. In regard to the high comparative indebtedness in some of the Australasian colonies, it should be remembered that, besides taxation, they all have available for meeting interest on works not yielding revenue—large sums derived from the occupation and alienation of Crown lands.

459. Judging from the average growth of population, Victoria can Effects of now borrow £1,200,000, and the Australasian colonies as a whole £6,200,000 per annum without increasing their liability per head. As, population. moreover, the money will probably in future be expended only on carefully selected reproductive works, there is every prospect that even if more were borrowed it would not add to the burdens of the people.

460. Municipalities in Victoria are empowered by the Local Municipal Government Act (54 Vict. No. 1112) to borrow money for permanent works or undertakings, but the amount so borrowed is not to exceed ten times their average annual income from general rates during the three years prior to the raising of the loan. The following is a statement of the number of cities, towns, and boroughs, and the number of shires, which had loans outstanding in September, 1891, also of the total amounts included therein. These amounts are exclusive of sums borrowed by the municipalities through the General Government for waterworks (viz., £375,763, the redemption of which is provided for by a sinking fund)—they being included in the public debt of the colony*:—

MUNICIPAL DEBT, 1891.

	At the end of the Municipal Financial Year.			
Municipalities.	Number of Districts which had Loans outstanding.	Total amount of outstanding Loans.		
Cities, towns, and boroughs Shires	40	£ 2,666,181 477,421		
Total	. 83	3,143,602		

461. In 1891, as compared with 1890, the number of municipalities Increase in which had outstanding loans increased by 8, viz., 2 cities, towns, and borrowings. boroughs, and 6 shires. The total increase in the amount outstanding was about £199,000; of which nearly £133,000 was due to further borrowing by cities, towns, or boroughs, and £66,000 to those by shires. The municipal debt has been increasing rapidly since 1883,

^{*} See table following paragraph 396 ante, also footnote (||) to that table. The Government moneys originally authorized to be advanced to municipalities was £678,063, but from this must be deducted £302,300 for the Ballarat Waterworks, which have been transferred to the Ballarat Water Commission.

when the debt was less than a fourth of what it was at the end of 1891, as is indicated by the following figures, which show the municipal debt in each of the last eleven years:—

## MUNICIPAL DEBT, 1881 TO 1891.

			${f \pounds}$	[			£
1881	4 • •	• • •	728,093	1887	• • •		1,708,252

Note.—Loans from Government are not included in this table.

Harbor

463. The borrowing powers of the Melbourne Harbor Trust were Trust loans. limited prior to 1888 (under Act 47 Vict. No. 763) to £1,000,000, but by an Act (52 Vict. No. 994) passed in December, 1888, these powers were increased to £2,000,000.* On the 15th October, 1891, the Trust exhausted its borrowing powers by floating a loan of £500,000 in London, bearing interest at 4 per cent. and having a currency of 30 years. The minimum price fixed for tenders was £95; the amount tendered was only £511,000, and the average price realised was £95 0s. 8d., which includes £1 3s. 2d. interest

^{*} For revenue and expenditure of the Trust, see table following paragraph 386 ante.

accruing from the 1st July, 1891, up to the periods when the various instalments were due. The leading particulars of the various loans floated are shown in the following table:—

TENDO OF TENDOM TROOT INVANO	MELBOURNE	HARBOR	TRUST	LOANS.

Total	2,000,000														

464. The Melbourne and Metropolitan Board of Works † is Debt of authorized to raise loans amounting to £5,000,000, in addition to tan Board of Works tertain Government loans for which the Board has become responsible, amounting to £2,389,934—of which £2,139,934 had been borrowed prior to the passing of the Act constituting the Board, and £250,000‡ was to be handed over when floated. The total authorized indebtedness of the Board is thus £7,389,934, of which £2,248,917—all in Government loans—was outstanding on the 30th June, 1891. The latter amount, however, has already been included in the public debt.§ The following shows the rates of interest payable on, and the due dates of, the various loans of which the Board's debt is made up:—

Loans Raised by Melbourne and Metropolitan Board of Works, 30th June, 1891.

Rate of Interest.	When Repayable.	Principal.	
$\begin{matrix} \% \\ 5 \\ 4\frac{1}{2} \end{matrix}$	1894 1904	£ 30,777 190,993	
4 (stock)	1901 to 1923 1897 ¶	$1,343,164 \parallel 108,983$	
$3\frac{1}{2}$	1923	575,000	
Total del	ot	2,248,917	

^{*} The stamp duty payable to the British Government was raised between the floating of this and the previous loan from \( \frac{1}{8} \) to \( \frac{1}{2} \) per cent.; otherwise the net price for this and each of the succeeding loans would have been 7s. 6d. higher than the amount stated.

† For particulars of the constitution of the Board see paragraph 49 ante.

‡ Of this, only £108,983 had been received up to 30th June, 1891.

¶ Or at any time afterwards after due notice being given.

[§] See table following paragraph 396 ante.  $\parallel$  Of this amount, £276,820 is repayable in 1901, £42,681 in 1904, £160,000 in 1907, £128,877 in 1913, £246,604 in 1919, £375,000 in 1920, and £113,182 in 1923.

Metropolitan Board loan of 1892.

465. On the 25th March, 1892, an interim loan of £500,000 was raised by the Board in Melbourne by means of debentures bearing interest at 5 per centum per annum, with a currency of five years, the principal and interest to be payable at the Board's office, in Melbourne, the interest being due in April and October of each year. The minimum was fixed at par, and 102 applications were received for a total of £1,082,400. The unconditional tenders above par, amounting to £464,000, were allotted in full, and the balance was allotted pro rata amongst individual tenderers, and consequently the Melbourne Banks, which applied for £375,000 at par, were unsuccessful tenderers. The average price obtained was £100 2s.  $2\frac{1}{2}$ d. net.

Tramways Trust loans.

466. The tramways in Melbourne and its principal suburbs were constructed by a Trust (called the Melbourne Tramways Trust) consisting of delegates elected annually by the municipalities interested. By the original Act creating this corporation, the Trust was authorized to raise all money required for the construction of tramways, as well as for the expenses of the Trust, by means of debentures secured on the lines constructed, also on the revenues of the municipalities represented, in the proportion of the length and cost of the tramways within their respective limits. The Melbourne Tramway and Omnibus Company, to which the lines have been leased for a period of thirtytwo years, are required to pay to the Trust the annual interest, also a yearly percentage to form a sinking fund calculated to extinguish the loan by the end of the lease. The borrowing powers of the Trust have been limited to £1,650,000; and the debentures are secured on the property as well as on the revenues of the municipalities interested; the latter being, moreover, jointly and severally, liable for the amount borrowed. Although the security offered is thus of the very best character, it was some time apparently before its true value was appreciated in London, as is evident by the low price obtained for the first issue as compared with the much higher prices for the The last loan floated, viz., £130,000, was placed subsequent issues. on the London market in January, 1891, making a total of £1,630,000, all bearing interest at the rate of  $4\frac{1}{2}$  per cent. particulars of the various loans, together with the prices realised, are given in the following table*:-

^{*} For further particulars relating to the Tramways Trust, see latter part of "Interchange" in the second volume, post.

467. The following particulars relating to the Sinking Fund for Sinking the redemption of the Tramways Trust loans has been kindly furnished Tramways Trust for this work by Mr. T. Hamilton, Secretary to the Trust:—

loans.

Sinking Fund.—Act No. 765 provides that the Company shall pay to the Trust as sinking fund  $1\frac{1}{2}$  per cent. for the first ten years, 2 per cent. for the second ten years, and 3 per cent. for the last ten years on the total amount borrowed, these terms to run from the date on which the first loan was floated. The total amount borrowed under this Act and its subsidiary one was £1,200,000, the sinking fund on which had to be paid by the Company from the 1st July, 1884. It was calculated that, capitalized at 4 per cent., these contributions would give an excess over the Trust's debt of £129,000. When subsequent Acts were passed, increasing the Trust's borrowing powers by £300,000 and £150,000 respectively, the Tramway and Omnibus Company consented on condition that the liability to pay to the sinking fund on the new loans should not commence until the 1st July, 1889, and the 1st July, 1890, respectively. It was also provided that these percentages should cease to be paid by the Company if at any time before the end of the extended lease (1st July, 1916) the amounts so contributed should be sufficient to repay the loan with all expenses; and that the Company should, on the other hand, be liable for any deficiency. Power was also given to the Trust to invest the sinking fund contributions in first mortgages of freehold land in Victoria, instead of restricting them to municipal and Government debentures and bank deposits. The total amount of sinking fund invested to the 31st December, 1891, is £157,350, all in 5 per cent. Victorian municipal debentures, which have cost the Trust a little over par.

468. If the municipal debts, together with the debts of the Harbor General and Trust, be added to the Government debt on the 30th June, 1891, viz., debt. £43,610,265,† it will appear that the total gross public liability of the colony was £48,753,867,‡ or a proportion of £42 10s. per head of population. The Metropolitan Board of Works debt is not added, as it has already been included in the public debt.

469. At the end of June, 1891, there was a total balance of Trust funds 1890 and £2,739,000 to the credit of the various trust funds, as against a credit

† On the 30th June, 1892, the debt of the General Government had increased to £46,711,287 (including Treasury Bonds £1,000,000).

‡ Exclusive of the Tramways Debt, which, although borrowed on the security of municipal property, is repayable by the Melbourne Tramway and Omnibus Company.

^{*} It should be stated that, in the first instance, the debentures for this loan were disposed of in Melbourne at a premium of 35s., to two of the Banks, who undertook to pay all expenses of floating the loan in London. The loan was duly floated there on the 4th February, 1886, and realized as high an average price as £107 16s. 8d., or about £107 ex accrued interest.

balance of nearly £2,573,000 at the end of the previous year, the principal increase being under the heads of Post Office Savings Banks, and the Municipal Investments account. The following are the particulars of the various funds at each of these periods:—

Trust funds 1870 to 1891. 470. The trust funds at the end of 1891 amounted to nearly  $2\frac{3}{4}$  millions sterling, whereas twenty-one years previously they amounted to less than half a million. Thirty-four per cent. of the total is invested in debentures or inscribed stock, and the balance is

‡ Exclusive of the amount of £75,073 referred to in the preceding footnote, but including £4,008 advanced to the Bungaree Loan Liquidation account. § Net increase.

^{*} It should be pointed out that the balance at the credit of this fund has been reduced by an advance of £75,073 towards the purchase of land adjoining the Titles Office (under Act 49 Vict. No. 835), on which amount the Assurance fund receives 4 per cent. per annum from the general revenue.

† This amount represents 7 Trustees' and 4 Insurance Companies.

either deposited in banks or used by the Government as a temporary loan fund to fall back on in case of emergency. Of the large amount of £1,700,000 uninvested or not held in cash in 1890-91, £631,096 was advanced on account of interest payable in London in 1891-2; £882,416 and £137,768 were advanced for the construction of railways and waterworks respectively, to be recouped from future loans; and £348,102, expended on certain public works, is to be recouped from the "Land Sales by Auction Fund." The following table shows the amounts, and manner of their investment, at the end of each of the last twenty-two financial years:—

TRUST FUNDS, 1870 to 1891.

471. All fees received from the licensing of persons authorized Licensing to sell spirituous liquors in Victoria are paid into a fund called "The Licensing Act Fund," which, after the payment of a certain proportion fixed by the Act to municipalities and termed the "equivalent," is charged with the general cost of carrying out the provisions of the Act. In 1890-91 there was a credit balance of

^{*} In agent's hands, London; owing by other Governments; advanced on account of Stock Act in anticipation of sales; advanced on account of loans; "deficiency met," "charges on account finance of succeeding year," etc.
† Amount chargeable under advances included in this and subsequent years.

£46,371 brought forward from the previous year, the receipts during the year amounted to £119,588, and the expenditure to £97,692, and the balance carried forward to the next year being £68,267. The receipts consisted of £115,391 from licences, £4,169 from fines, and £28 from sale of confiscated liquor, etc. The expenditure was made up of £91,706 "equivalent" paid to municipalities, £1,549 for travelling expenses of members of Licensing Courts, £2,684 to police acting as inspectors, £1,398 for incidental expenses, and £355 for cost of taking poll of electors.

Balance at credit of public account. 472. The balance at the credit of the public account on the 30th June, 1891, was £2,663,907, but as various sums had been advanced in anticipation of the next year's appropriations, including interest, etc., due 1st July, remitted to England (£631,096), also advances to be recouped from "Land Sales by Auction Fund" (£348,102), and advances for railway and waterworks construction to be recouped from future loans (£1,020,000), etc., the actual cash balance in hand became reduced to £550,044. The balance was distributed over the four principal accounts as follow:—

Pensions.

473. The retiring allowances paid from the Victorian revenue are of two kinds, pensions and superannuation allowances. Of the former there were in 1890-91 five in all, embracing allowances to three former Ministers released from office on political grounds, to the widow of a former Governor of Victoria, and to the daughter of an eminent explorer of the Australian coasts. The total amount included in these pensions was £3,767.

Superannuation allowances under Acts of Parliament.

474. The persons entitled under Acts of Parliament to superannuation allowances in the same year numbered 954, and consisted of one ex-Supreme Court Judge, eight former judges of County Courts, a late Clerk of Parliaments, a late Master-in-Equity, two late Commissioners of Audit, 835 ex-officers of the Public Service,

^{*} On the 30th June, 1892, the credit balance was £1,188,579, and the cash balance £900,283.

28 ex-officers of the Lunacy Department, 69 ex-officers of the Railway Department, and 9 ex-officers of the Defence Forces. The aggregate amount of the allowances to these persons was £102,802, or an average of £107 15s. 2d. to each recipient.

475. Taken together, the pensions and superannuation allowances Pensions, numbered 959, or 149 more than in the previous year, and the sum paid amounted to £106,569, or £15,564 more than in that year. The average to each recipient was £111 2s. 6d., or £1 4s. 6d. less than in 1889-90. It may be mentioned that the increase in the number and amount of these allowances is more apparent than real, it being due chiefly to the circumstance that a large proportion of allowances which were formerly voted annually are now paid under Special Appropriation.

Acts, 1890 and 1891.

476. The different authorities under which pensions and superannu-Pensions, ation allowances are legalized, and the individuals to whom they were 1890-91. awarded, also the number on the list, and the gross and average amount of the pensions and superannuation allowances—not subject to annual votes—paid during 1890-91, will be found in the following table:—

^{*} Not including £2,000 paid to the Police Superannuation Fund, and allowances voted annually, for which see paragraph 481 post.

Police pensions, how granted.

477. Superannuation allowances to the police are not included in the foregoing statement, as they are paid under the Police Regulations Statute (37 Vict. No. 476) out of a fund called the Police Superannuation Fund, which is maintained by an annual income of £2,800 arising from the investment of £70,000 in Government stock; by an annual subsidy of £2,000 from the consolidated revenue; by a moiety of the fines inflicted by Courts of Petty Sessions under various Statutes (£9,159 in 1890-91); and, if necessary, by a deduction not exceeding  $2\frac{1}{2}$  per cent. from the pay of the members of the force, and a further grant in aid from the consolidated revenue. In all cases of a police superannuation allowance being granted, the option is given to the retiring member to commute it for a gratuity equal to one month's pay for each year of service.

Number of police pensions and gratuities, 1890-91.

478. The number of recipients of police retiring allowances in 1890-91 was 253,* on which the annual amount payable was £24,559, or an average of £97 ls. 5d. to each recipient. It should be mentioned, however, that the actual amount paid in 1890-91 was £24,960, in consequence of arrears being included. In addition, gratuities in lieu of retiring allowances were paid in 8 instances, amounting in the aggregate to £4,151, or an average of £519 to each recipient.

Deduction from pay of police, and votes in aid.

479. In the year under review, for the fourteenth time, a deduction was made from the pay of the police for the purpose of enabling the superannuation fund to meet the demands made thereon. The deduction was at the rate of  $2\frac{1}{2}$  per cent., or the full amount allowed by law, and realized £5,152; as against this, however, the proportion paid by officers of over 30 years' service, viz., £396,† was refunded out of the consolidated revenue. Even with this addition, however, the ordinary receipts have proved insufficient, and the large balance which existed in the earlier years of the fund's existence having gradually become exhausted, it became necessary for Parliament to vote in aid of the fund a sum of £2,600 in 1880-81, £5,000 in 1881-2, £8,000 in 1882-3, £10,000 in each of the four years 1883-4 to 1886-7, £7,000 in each of the three years 1887-8 to 1889-90, and £8,000 in 1890-91. The balance to the credit of the fund at the beginning of 1890-91 was £3,659, but at the end of the year this had decreased to £1,960.

Retiring allowances infirmity.

480. Except in cases of infirmity of mind and body, the minimum granted or age at which retiring allowances are granted to members of the civil

^{*} Of these 5 lapsed during the year, so that the number at the end of the year was 248. † Only £250 of this amount appears to have been credited to the fund during the year.

service is sixty years,* and to members of the police force fifty-five years. Of the existing retiring allowances, however, 37 per cent. of those granted to public servants,† and as many as 45 per cent. of those granted to the police, were awarded in consequence of infirmity or disablement before the full age had been attained.

481. Besides the superannuation allowances and pensions for Allowances which amounts are specially appropriated, certain allowances are Parliament voted by Parliament each year to retired public servants who, prior to the passing of the Public Service Act 1883, were attached to the unclassified branches of the service, and consequently were not comprehended in any of the several Statutes under which retiring allowances are legalized; in addition to which there was voted a grant in aid of the Police Superannuation Fund, and pensions to two widows of constables who were shot by the Kelly gang of outlaws. The number of retiring allowances voted in 1890-91, the gross amount paid, and the average to each recipient, also the departments in which the several recipients served, will be found in the following table:—

Superannuation Allowances and Pensions voted by Parliament, 1890-91.

Retiring allowances, and 1890-91.

483. Taking into account pensions, retiring allowances, compensaetc., 1889-90 tions, and gratuities of all kinds, whether specially appropriated or voted, the amount paid by the State was greater by £31,658 in 1890-91 than in the previous year.

^{*} Including allowances to officers under the Civil Service and Public Service Acts, the Lunacy Statute and the Discipline Act.

[†] These figures represent the amount paid from the general revenue, which consists of the usual endowment of £2,000, and an additional grant of £8,396 voted by Parliament.

[‡] See table following paragraph 286 ante.

pensions.

484. The Port Phillip Pilot Sick and Superannuation Fund was Pilots' originally under the control of the Pilot Board, but under the Marine Board Act (52 Vict. No. 965), it was handed over to the Treasurer of the colony on the 26th April, 1889. The amount at its credit at the commencement of the year 1890-91 was £43,262, consisting of £40,900 The receipts during the financial in securities and £2,362 in cash. year amounted to £2,890, of which £816 was deducted from the pay of pilots, £2,015 was received as interest on moneys invested, and £59 was unallotted pilotage; whilst the expenditure, all but £385 being on account of pensions, amounted to £2,562. The number of pensions on the list at the end of the year was 19, and the annual amount payable was £2,051. The balance at the credit of the fund on 30th June, 1891, was £43,590. These pensions are not included in the foregoing tables.

485. Since the passing of the Pensions Abolition Act (45 Vict. Abolition of No. 710), viz., on the 24th December, 1881, no persons entering the allowances. Public Service, except Judges of the Supreme and County Courts and officers and members of the police force, are entitled to a retiring allowance or gratuity of any kind whatever.

## PART IV.—VITAL STATISTICS.

Marriages, 1891.

486. The marriages returned to the Registrar-General in 1891 numbered 8,780, as against 9,187 in 1890, 9,194 in 1889, and 8,946 in 1888.

Marriages, 1891 and former years. 487. The marriages returned in 1891, although fewer than in the three previous years, were more numerous than those in any year prior to those. The number returned annually had been almost stationary during the seven years prior to 1880, but in that year an advance was made which continued until the year preceding that under review. In 1882, for the first time, the marriages returned exceeded 6,000; in 1884 they exceeded 7,000; in 1888 they nearly reached 9,000; and in 1889 and 1890 they exceeded that number by nearly 200*; but in 1891 they again fell below 9,000.

Marriage rate.

488. The proportion which the number of marriages bears to the total population is generally called the marriage rate. This for many years was declining in Victoria, for, whilst in the three years prior to 1863 it was above 8 per 1,000 of both sexes, and all ages; from 1863 to 1865 it was between 7 and 8, and from 1866 to 1878 it was between 6 and 7 per 1,000. It reached its lowest point, 5.98 per 1,000, in 1879; then gradually revived, until the period between 1888 and 1890, when it again exceeded 8 per 1,000, for the first time since 1862. In 1891 a somewhat sudden fall took place to 7.7 per 1,000, which was about the same average as that prevailing during the four years prior to 1888. The following table gives the number of marriages and number of persons married per 1,000 of the population during each of the thirty-two years ended with 1891:—

Annual Marriage Rate, 1860 to 1891.

			Per 1,000 of the Mean Population.

489. It has been shown, upon more than one occasion,* that the Marriage frequency of marriage is not dependent upon the numbers of the total population, still less upon the number of marriageable women, but almost entirely upon the number of marriageable men the community contains, the tendency of whom to marry is modified by their habits and occupations, and upon the view they take of their future Thus men have a greater tendency to marry in prosperous prospects. than in dull times, and the men of a rural, and especially of an agricultural, community have a greater tendency to marry than those of To demonstrate this, the following table has been constructed, showing the proportion of marriages to the population, to

^{*} See Victorian Year-Book, 1889-90, pages 265 to 267; same work, 1879-80, pages 103 and 10 same work, 1880-81, pages 199 and 200; and same work, 1881-2, pages 165 and 166.

the number of single men and to the number of single women, in each of the last six census years ended with 1891:—

Proportion of Marriages to Population* and to Single Men and Women, 1854 to 1891.

					Chinese and

1891		1,130,463	163,048	173,138	9,007	7.97	55.24	52.02	

Fluctuations in mar-riage rate.

490. It will thus be observed that, whilst the proportion of marriages to the population (marriage rate), and to the marriageable women, has fluctuated considerably, the proportion to the marriageable men has been tolerably constant, the extremes being  $57\frac{1}{2}$  in 1881 and 42 in 1861. At the last three decennial periods, when the colony was in a more settled condition than at earlier periods, this proportion averaged 55 per 1,000, which also was the rate in 1891. At the same periods the proportion of marriages per 1,000 marriageable females varied from 72 in 1871 to 48 in 1881; since 1881, as was anticipated,  $\S$  this proportion has increased, and it now stands at over 52.

Victorian, French, and Swiss marriage rates. 491. In 1891, according to the lowest line in the last table, marriageable males in Victoria married at the annual rate of 55 per 1,000, and the marriageable females at the rate of 52 per 1,000. Similar proportions for France are 57 and 46, and for Switzerland 49 and 38; the former, especially as regards the males, approximating closely to, but the latter, as regards both males and females, being much lower than, the proportions for Victoria.

Marriage rates in Australasian colonies. 492. The following table gives a statement of the number of marriages to every 1,000 of the population of the various Australasian

^{*} The populations in this table are those returned at the respective censuses, the Chinese and Aborigines being excluded; and the marriages are those (exclusive of marriages of Chinese and Aborigines) which took place in the twelve months of which the date of each census was the middle. The proportions of the latter to the former, therefore, differ slightly from those in the previous table, which are based upon the total mean population and all the marriages in the calendar year.

[†] Comprising bachelors of 20 and upwards, and widowers at all ages. ‡ Comprising spinsters of 15 and upwards, and widows at all ages.

[§] See Victorian Year-Book, 1889-90, Vol. I., paragraph 447.

| The French and Swiss male and female marriage rates are taken from papers read by M. Toussaint Loua before the Statistical Society of Paris in September and December, 1884.

colonies for each year from 1865 to 1891, except Western Australia, for which colony it is given for the last twenty of those years:—

493. According to an average extending over the whole of the Marriage years named in the table, the marriage rate in Victoria was almost identical with that in Western Australia and Tasmania, but was below that in any of the other colonies; in the last year, however, the marriage rate was highest in Western Australia, and next highest in Victoria, whilst the colonies in which it was lowest were New Zealand and Tasmania.

compared.

494. The following is the order of the colonies in reference to order of their respective marriage rates in the last year shown in the table and according to the average of the whole period of twenty-seven years:—

colonies in respect to marriage rates.

† The numbers doubled give the persons married per 1,000 of the population.

^{*} The rates for all the colonies, except Victoria (which had been previously corrected) and Western Australia, have been amended, since last publication, in accordance with revised estimates of population based on the results of the census of 1891. For the number of marriages in the various colonies during the nineteen years ended with 1891, see General Summary of Australasian Statistics (third folding sheet) published in the second volume of this work.

Marriage rates in **A**ustralia and Australasia.

495. The mean marriage rate of the five colonies situated upon the Australian continent, and of those colonies with the addition of Tasmania and New Zealand, shows a falling off since 1883 or 1884, when it was at a maximum, and was lower in 1891 than in any year since 1880; the mean rate in the continental colonies was, however, higher than in any other year since 1872, but that in Australasia as a whole was lower than in any other years except 1876 and 1877, as is shown by the following figures:—

MARRIAGE RATES IN AUSTRALIA AND AUSTRALASIA, 1873 to 1891.*

			larriagest per    n Population.			Number of Marriagest per 1,000 of Mean Population.

Marriage rates in certain British possessions.

496. Returns of marriages, births, and deaths are obtainable for few British colonies outside of Australasia. The following are the marriage rates in those colonies—which, it is to be regretted, are, for the most part, of only minor importance—for which such particulars have come to hand, or can be gathered from their official reports. The low rate in Barbados is explained by the fact that the negro population as a rule ignore the marriage ceremony. circumstance may perhaps also affect the marriage rate in the Mauritius, although the low marriage rate there would, to a certain

^{*} The rates for all the years since 1881 have been amended in accordance with the results of the census of 1891, since the last publication of this work.

+ The numbers doubled give the persons married per 1,000 of the population.

extent, be accounted for by the fact that the large imported Cooly population is for the most part comprised of males, the females introduced being extremely few:-

Marriage rate in United Kingdom. 500. The following, according to the reports of the Registrar-General of England, is the marriage rate of the United Kingdom during the twenty years ended with 1890. If, however, the registrations in Ireland are defective, as is alleged,* some disturbance to the calculations must result therefrom. It will be observed that, whilst the rates in the years 1885 to 1888 were exceptionally low, the rate in 1890 was higher than in any year since 1877:—

#### MARRIAGE RATE IN THE UNITED KINGDOM, 1871 TO 1890.

^{*} See footnote (¶) on previous page.

501. Although rural rather than urban life tends to the promotion Marriage of marriage, it happens that, since the marriage ceremony is generally performed in towns, whatever may be the ordinary residence of the persons marrying, the marriage rate recorded there is much higher than that in the country. In Victoria, during the year 1891, it was about two and a half times as high in the metropolis and in country towns as it was in rural districts, as will be seen by the following table, which contains a statement of the proportion of marriages to the population in the three classes of districts in the year 1891 and in the previous decennial period:—

MARRIAGES IN URBAN AND COUNTRY DISTRICTS, 1891.

	Estimated	Marr	Proportion per 1,000		
Districts.	Mean Population.	Total Number.	Number per 1,000 of the Population.	of the Population, 1881-1890.	
Melbourne and suburbs (Greater Melbourne)	491,700	4,872	9.91	11:11	
Extra-Metropolitan towns	195,940	2,059	10.51	10.83	
Country districts	459,290	1,849	4.03	3.48	
Total	1,146,930	8,780	7:66	7:67	

502. Marriages in Victoria are generally most numerous in the Marriages autumn quarter, next in the spring quarter, next in the summer quarter. quarter, and least numerous in the winter quarter. In 1891, however, the marriages in the summer and winter quarters were more numerous than those in the spring quarter. The following table shows the number and percentage of marriages in each quarter of that year, and the mean percentage in each quarter of two previous decades:-

MARRIAGES IN EACH QUARTER.

		Year	1891.	Percentage in Ten Years—		
Seasons.	Quarter ended on the last day of—	Number of Marriages.	Percentage.	1871 to 1880.	1881 to 1890.	
Summer Autumn Winter Spring	March June September December	2,230 2,253 2,152 2,145	25·40 25·66 24·51 24·43	24·43 26·19 23·81 25·57	23.44 $26.66$ $23.35$ $26.55$	
	Year	8,780	100.00	100.00	100.00	

503. In 1891, 743 widowers and 673 widows re-entered the Remarriage state. During the last eighteen years more widowers have marriages in Victoria. Formerly it was different. In the eight re-married than widows.

years ended with 1873 the widowers re-entering the married state numbered 4,344, and the widows 4,618, and at earlier periods in the history of the colony the preponderance of re-marriages of widows over those of widowers was even greater than this. Such a preponderance would be likely to happen only in a country in which females are much less numerous than males; and the fact of the reverse having been the case of late years would afford indirect proof, if such were needed, that the proportion of marriageable females to marriageable males in the population has increased, a circumstance which was made evident by the results of successive census enumerations.* In England and Wales, during the ten years ended with 1890, 42 per cent. more widowers re-married than widows, the proportion in every 1,000 marriages being 122 of the former, and 86 of the latter. The following is a statement of the number of widowers and widows who re-married in Victoria during each of the twenty-six years ended with 1891:—

Number of Re-marriages of-Number of Re-marriages of-Year. Year. Widows. Widowers. Widowers. Widows. 98 ... . . . • • • . . . . . . . . . . . . . . . Total... 16,735 15,456

RE-MARRIAGES, 1866 TO 1891.

Former condition of those marrying.

504. In 1891, nearly eight-ninths of the unions which took place were between bachelors and spinsters, the proportion having gradually increased since 1871-1880, when it was about four-fifths. The next most numerous marriages are generally those between widowers and spinsters, although they have occasionally been exceeded by marriages between bachelors and widows. Marriages between widowers and widows in the decennial period 1881-90 were about a thirtieth, but in 1891 only about a thirty-sixth of the whole. The following is the number and percentage in each of these groups during 1891, and the percentage during the decennial periods 1871-1880, and 1881-1890:—

^{*} According to the census of 1881 there were in Victoria nearly 120 marriageable females to every 100 marriageable males, and according to that of 1891, 106 per 100.

FORMER CONDITION OF PERSONS MARRIED.

Remarriages in various countries.

506. By the figures in the following, which have been derived from those in the foregoing table, it would appear that a larger proportion of widowers re-marry in Vermont and a smaller in the Australasian colonies, and a larger proportion of widows re-marry in Hungary, and a smaller in Sweden and Norway, than in any other of the countries named; also, that, in Victoria, widowers re-marry less frequently than in any of those countries except New Zealand, New South Wales, and Queensland; but that in eleven of these countries widows re-marry less frequently than in Victoria:—

Marriages of divorced persons, 1891. 507. Divorced persons marrying are classed as bachelors and spinsters, unless in cases where they had become widowers or widows before contracting the marriage from which they were released by divorce. Twenty-two divorced men and twenty-three divorced women were married in 1891; eighteen of the former married spinsters, and three widows; eighteen of the latter married bachelors, and four widowers, and in one instance both parties to the marriage had been divorced. At least thirty of the forty-five divorced persons marrying

in 1891 had been divorced in the last two years. In the previous year, only seven divorced men and nineteen divorced women were re-married.

508. The persons returned at the census of 1891 as living in a state Number of of divorce numbered 196, viz., 110 males and 86 females. The occupations of the former were as follow:—Accountant, bookkeeper, clerk, 6; agent, broker, 6; annuitant, independent means, 3; artist, 1; baker, 2; bookmaker, 2; bootmaker, 2; bricklayer, mason, 8; builder, contractor, 5; cab proprietor, coach driver, 4; carpenter, 2; carrier, carter, 6; chemist, 1; cook, 1; dealer, 1; farmer, gardener, 13; fireman, stoker, 3; horse dealer, 1; hotelkeeper, 2; ice manufacturer, 1; labourer, stonebreaker, 8; miner, 4; music teacher, 1; physician, 1; railway employé, 5; Salvation Army officer, 1; seaman, steward, 3; slater, 1; storeman, 1; State school teacher, 1; tinsmith, 1; trapper, 2; traveller, 5; upholsterer, 1; vine and fruit grower, 1; wheelwright, 1; occupations unstated, 3. The females were of the following occupations:—Boarding-house keeper, 4; bookkeeper, 1; caretaker, 1; cigarette maker, 1; cook, 1; daughter assisting in hotel, 1; domestic duties, housekeeper, 20; domestic servant, housemaid, 15; dressmaker, milliner, 6; farmer, 1; furrier, 1; grocer, 1; independent means, 6; journalist, 1; laundress, 4; nurse, 2; pianist, 1; restaurant keeper, 1; saleswoman, 2; storekeeper, 1; tailoress, 1; occupations unstated, 14. Of the males, 53 were returned as members of the Church of England, 17 of the Presbyterian Church of Victoria, 3 as Wesleyan Methodists, 2 Congregationalists, 4 Baptists, 7 Lutherans, 3 members of the Salvation Army, 8 Roman Catholics, 1 a member of the Catholic Apostolic Church, 3 Freethinkers, others 9. Of the females 42 were returned as members of the Church of England, 7 as of the Presbyterian Church of Victoria, 4 as Wesleyan Methodists, 1 Baptist, 2 members of the Church of Christ, 2 Lutherans, 1 of the Salvation Army, 20 Roman Catholics, 2 Jews, and 5 others. At the previous census in 1881, only 19 divorced persons were returned, viz., 9 males and 10 females.

509. Persons whose wives or husbands have not been heard of for Deserted a period of seven years may marry again without rendering themselves liable to be prosecuted for bigamy; but such unions are subject to the serious disadvantage that the issue by the second marriage would be illegitimate, and the marriage itself void, if it should turn out that the first husband or wife was alive at the time thereof. bably to the facilities afforded by the Divorce Act, passed in 1889, for obtaining a divorce in such cases, only one deserted person (a male)

availed himself of this provision in 1891. He married a widow, and had not heard of his former wife for nine years. In the previous year four deserted wives and one deserted husband re-married.

Divorce Act 1889. 510. It may be mentioned that by the Divorce Act 1889* (53 Vict. No. 1056), which received the Royal assent on the 13th May, 1890, it is provided that any married person domiciled in Victoria for two years and upwards may obtain a divorce, after which he or she may legally re-marry, on proving that he or she had, without just cause or excuse, been wilfully deserted, and continuously so deserted over a period of three years or upwards.

Marriages of Aborigines.

511. The marriages of 3 Aboriginal males with Aboriginal females are included in the returns of 1891. One of the males was a native of South Australia, but the others were natives of Victoria. In the previous year, 3 marriages of Aborigines took place.

Marriages of Chinese.

512. Eight Chinese males were married in Victoria in the year 1891, as against 14 in 1890, and 18 in 1889. Of the women who married Chinese in the year under review, one was of Chinese parentage, although born in Victoria. During the twenty-five years prior to 1891, 397 Chinamen were married in Victoria, or an average of about 16 per annum. The following table shows the nationalities of the women who formed matrimonial unions with Chinese during that period, also during the year under review:—

NATIONALITY OF WOMEN MARRYING CHINESE, 1866 TO 1891.

^{*} An account of the provisions of this Statute is given under the head "Law, Crime, etc.," post; also further particulars relating to the number of divorces.

† One of the wives, although born in Victoria, was stated to be of the Chinese race.

‡ Three of these were stated to be half-castes.

513. The marriage ceremony in Victoria may be performed either Marriages by the registered clergy of any religious sect, or by lay registrars. 1891,  $94\frac{1}{2}$  per cent. of the marriages were celebrated according to the former, and  $5\frac{1}{2}$  per cent. according to the latter, system. riages in 1891 numbered 497, which was below the average; as a rule they exceed 500, whilst on two occasions during the last ten years they nearly reached 650. The following table gives a statement of the number and percentage of marriages celebrated by each religious denomination and by lay registrars during 1891, also the percentage in the decennial periods ended with 1880 and 1890 respectively':—

MARRIAGES BY DIFFERENT DENOMINATIONS.

Marriages performed acco	ording to	the	Marriage	es in 1891.	Percentage of Marriages in Ten Years—				
usages of the-			Number.	Percentage.	1881 to 18 <b>9</b> 0.	1871 to 1880

514. It should be mentioned that, occasionally, a marriage is per-Duplicate formed twice over, viz., by a lay registrar and a clergyman, or by clergymen of two different denominations. It is not always easy to detect these cases in the registers, but the circumstances occurs too seldom to cause any serious disturbance in the marriage statistics. Five such cases, however, were noticed in 1891, viz., those of two couples who had been previously married—under what rites is not stated being re-united under the forms of the Baptist and Roman Catholic denominations respectively; and those of three couples who had been previously married by the civil authorities in Victoria, New South Wales, and Batavia respectively, being re-married—one according to the rites of the Church of England, and two according to those of the

^{*} Including Primitive Methodists and United Methodists

Jews. The two last-named cases have been included in the returns; the others have been omitted. In one case the parties had been married previously in England as far back as 1856.

Sects of Aboriginals married. 515. Of the 3 Aboriginal marriages which took place in 1891, 1 was solemnized according to the rites of the Moravians, 1 according to those of the Church of England, and 1 according to those of the Presbyterians.

Sects of Chinese married. 516. Of the 8 marriages of Chinese in 1891, 1 was celebrated according to the rites of the Free Church of England, 2 according to those of the Presbyterians, 3 according to those of the Methodists, 1 according to those of the Baptists, and 1 was performed by a local registrar.

Marriages by different denominations.

517. The returns of the censuses of 1881 and 1891 afford an opportunity of comparing the number of marriages performed according to the rites of each particular denomination with the numbers of that denomination in the population; and by taking the mean of the returns of the two periods, and of the marriages which were performed in the interval between them, the same information is obtained extending over a period of ten years. The results are given in the following table, as are also those of the previous decennial period:—

Proportion of Marriages to Number of each Denomination, 1871-80 and 1881-90.

	Persons of each	Marriages celebrated annually.								
Religious Denomination.	Denomination (mean of 1881 and 1891).	Mean of	Proportion per 1,000 persons living							
		1881 to 1890.	1881 to 1890.	1871 to 1880.

^{*} Including Buddhists, Confucians, etc., those of no denomination and of no religion, and the unspecified. 
† Marriages by lay registrars.

518. It will be observed that the denominations which solemnize Churches most marriages in proportion to their numbers in the population are perform the Bible Christian, the Independent, and the Baptist, in the order named. In all these cases the proportions in the ten years 1881 to 1890, were 16 per 1,000 or upwards, whilst the proportions in all the other denominations were below 10 per 1,000 persons living. proportion to their respective numbers, the marriages performed in the ten years named according to the rites of the Church of England were much fewer than those celebrated according to the rites of the Wesleyans, and Presbyterians, but were more numerous than those performed according to the rites of the Roman Catholic Church, as well as those of all other denominations, except the three first named. In the last decade, as compared with the preceding one, a marked increase took place in the marriage rate amongst most denominations, the only ones showing a decrease being the Society of Friends and the Calvinistic Methodists.

most marriages and vice versa.

519. The numbers of either sex who evinced their want of elemen- signing with marks. tary education by signing the marriage register with a mark instead of in writing were as follow in 1891, the proportion of those who signed with marks to the total numbers married being also shown:—

SIGNING MARRIAGE REGISTER WITH MARKS, 1891.

			Signing with marks.						
Persons Married.		Numbers Married.	Total Number.	Number in every 100 Married.					
Bridegrooms	•••	8,780 8,780	110 133	1·25 1·51					
Mean	•••	8,780	121:5	1:38					

520. In proportion to the total numbers married, a very satisfactory Increased increase has taken place of late years in the number of both males and females signing the marriage register in writing. With few exceptions, a constant improvement has been apparent from year to year-nearly every year, as compared with its predecessor, showing a smaller proportion of persons signing with marks. In 1891, the proportion of men signing with marks was lower than in any previous year, whilst that of women was lower than in any previous year except 1889, as will be seen by the following figures, which show the proportions for the last nineteen years:-

writing.

Signing with marks, 1853 to 1872.

521. A very much more decided improvement is shown by comparing these results with those of the twenty years prior to 1873, which embrace the whole period from 1853, when the registration system was inaugurated in Victoria, to the end of 1872. In this period 86,062 marriages were registered, with the result that 7,902 of the bridegrooms and 17,824 of the brides signed the register with These numbers give the following proportions as the average for the twenty years:—

Numbers Signing with Marks per 100 Married, 1853 to 1872.

Men. 9.18 Women. 20.71

Mean. 14.95

More females than males sign with marks.

522. It will be noticed that in every one of the years, except 1880, 1886 and 1889, the proportion of men able to write has been greater than that of women.

Cases of both signing with marks.

523. The marriages in which marks instead of writing were made use of in 1891 numbered 223, but in only 20 of these, or about 1 in 11, did both the parties use marks. In the 203 other instances either the husband or the wife signed in writing. Thus, whereas in the case of 1 marriage in 43, either the bride or the bridegroom was unable to write, it happened in the case of only 1 marriage in 439 that neither party was able to sign the marriage register in writing.

Signatures

524. Of the 8 Chinese who married in 1891, 2 signed with an of Chinese. ordinary cross, and 6 in writing. Of the women they married, all but 2 signed in writing.

Signatures of Aborigines.

525. In the case of the Aborigines who married in 1891, all the females signed in writing, but 2 of the males signed with marks.

Signing with marks in each denomination.

526. The proportion of persons signing with marks is found to differ according to the religious denomination. Means are afforded by the following table of observing the position of the adherents of the

different sects so far as the possession of a sufficient amount of rudimentary education to enable them to write their names is concerned. The figures are those of the year 1891, and the average of the decennial periods ended with 1880 and 1890 respectively. Considerable improvement will be noticed in respect to all the principal denominations:--

SIGNING WITH MARKS IN EACH SECT.

		Number signing with Marks in every 100 Married.

Total	1.25	1.21	1:38	2.17	2:38	2.28	5.31	7.93	6.62						

527. It will be observed that the proportion of those signing with Roman marks is generally higher amongst marriages performed according to the rites of the Roman Catholic Church than amongst those celebrated by any other religious denomination, but that the numbers in 1891 show a very considerable improvement as compared with the ten years ended with 1890, which shows a still more marked improvement as compared with the ten years ended with 1880. The proportion so signing amongst civil marriages, although formerly lower, has latterly been much higher than amongst marriages by Roman Catholics.

528. In 48 marriages by Unitarians which took place in the Marriages by twenty-one years ended with 1891, not one instance occurred of either of the parties signing with a mark; this denomination, therefore, finds no place in the above table. In 128 marriages by Calvinistic Methodists during the same period, all but two of the males signed in writing, but five of the females signed with marks. In 418 marriages of Jews which took place prior to 1889 only 7 persons signed with marks; but in 115 marriages of Jews celebrated since, as many as 14 persons signed with marks. On examining the returns of the last two years,

Catholic and civil marriages.

Unitarians, Calvinists, and Jews.

it was found that most of the Jews not signing in writing were Eastern Jews, chiefly from Russia or Russian Poland.

Signing with marks in Australasian colonies.

529. A statement of the numbers who sign the marriage register with marks is published in all the Australasian colonies except Western Australia and Tasmania, and from the figures given the following percentages for the five years 1886 to 1890 have been deduced. The colonies are placed in order according to the state of education thus displayed, the colony with the smallest proportion signing with marks being placed first, and that with the reverse last:—

SIGNING WITH MARKS IN AUSTRALASIAN COLONIES, 1886 to 1890.

530. By these figures it appears that the proportion of persons Victoria able to sign in writing is, on the average, larger in this than in any illiterate other colony. Next to Victoria in this respect is New Zealand, in which the proportion of males signing in writing was in two of the years—viz., 1886 and 1888—even larger than in this colony. South Australia, moreover, in 1887, the proportion of females set down as having signed with marks was smaller than in any other colony. The colonies, generally, show improvement from year to year, and there is every reason to expect that in all the colonies, as the children educated under the compulsory systems established arrive at marriageable ages, it will become a rare occurrence for a marriage to be attested otherwise than in writing.

531. No returns are at hand showing the manner in which the signing with marriage registers are signed in British colonies other than those various The following, however, is a statement of the numbers who signed with marks in the latest year for which the information is available in the undermentioned countries, which are arranged in order; the least illiterate country being placed first and the rest in succession:

#### SIGNING WITH MARKS IN VARIOUS COUNTRIES.

		Number Signing with Marks to every 100 Married									
Country.	Year.	Men.	Women.	Mean.							
Prussia	1884	3.31	5.11	4.21							
Scotland	. 1889	4.30	7.38	5.84							
England and Wales	1890	7.19	8.31	7.75							
Holland	1877	7.53	14.83	11.18							
France	1882	14.39	22.62	18.50							
Ireland	1890	20.36	20.86	20.61							
Italy	1886	21.58	31.73	26.65							

532. By comparing these figures with those in the previous table, countries it will appear that adult education, so far as it is indicated by signature to the marriage register, is more forward in Victoria, New Zealand, South Australia, and New South Wales than in any of the countries named; also that in Queensland it is more forward than in any except Prussia, in which the proportion signing with marks is much smaller than in any of the other countries named. comes next to Prussia, but it is more than one-third as illiterate Holland, which comes next to Scotland and England, would again. doubtless rank higher were it not that the latest return available dates as far back as 1877, when adult education was probably not so

illiteracy.

advanced as it is now. The very large proportion signing with marks in Italy and Ireland attracts particular attention.

Ages of bridegrooms and brides tion.

533. The age of both bridegroom and bride was specified in the case of all but 71 of the 8,780 marriages which took place in 1891. in combina. In 57 of the defective entries the age of neither party was given; in 7 cases the age of the husband was stated, but not that of his wife; also in 7 instances the age of the wife was given, but not that of the husband. The following table shows the ages of the husbands and of the wives in combination:—

Note.—This table may be read thus:—Two men between 25 and 30 married girls between 15 and 16; nine women between 35 and 40 married men between 21 and 25, etc.

Relative ages of husband and wife.

534. An examination of the 8,709 cases in which the ages of both parties are specified will show that in 2,851 instances, or 33 per cent. of the whole, both parties to the marriage were about the same age; in 825 instances, or 9 per cent. of the whole, the wife was older than the husband; and in 5,033 instances, or 58 per cent. of the whole, the husband was older than the wife.

Inequalities of age.

535. Some striking inequalities of age amongst the parties married appear in several of the columns, as, for instance, a man aged 81

married a woman between 21 and 25, one between 70 and 75 married a woman between 25 and 30; two men between 65 and 70 married women between 21 and 25; and two between 50 and 55 married girls under 21. On the other hand, three women between 21 and 25 married youths of 18; a woman between 30 and 35 married a youth of 20; three women between 50 and 55 married men between 30 and 35; a woman between 60 and 65 married a man between 35 and 40.

536. It will be noticed that two youths aged 16 and two aged 17 Extreme took upon themselves the cares and responsibilities of matrimony, their wives, moreover, being only a little older. On the other hand, it will be remarked that six men who had passed the age of 75—two of them being 81 years of age—entered the marriage state, the partners of three of them being also advanced in life.

537. The next table has been designed for the purpose of showing Age at which marthe ages at which persons of either sex generally marry, the information being given for the year 1891, and for the decennial period 1881 to 1890:—

riage is contracted.

^{*} The bridegrooms and brides of unspecified ages being omitted, these numbers are less than those in the last table by 64 in each case.

Frequency of marriage at 21 to 30.

538. The large proportion of both sexes marrying at between 21 and 30 years of age is very marked; thus in 1891 more than two-thirds of either sex who married were between those ages. These proportions are somewhat higher than those shown by an average extending over the last ten years.

Ages of Chinese bridegrooms and their brides.

539. In the case of the marriages of Chinese which took place in 1891, the men were all older than the females with whom they formed unions. None of the former were under 23 years of age, but of the latter, two had not reached the age of 21. The following table shows the ages of the Chinese bridegrooms and of their brides in combination:—

Ages of Chinese Bridegrooms and their Brides in Combination, 1891.

Ages of Aborigines marrying. 540. Of the three male Aborigines who married in 1891, two were bachelors and one a widower, and of their partners two were spinsters and one a widow. The ages of bridegroom and bride were set down as follow:—21 and 23, 22 and 18, 42 and 19.

Marriages of minors.

541. In almost all civilized countries, minors are not permitted to marry without the consent of their parents or guardians, but the youngest age at which persons may marry after obtaining such consent varies in different countries, ranging from 14 for males and 12 for females in the United Kingdom, Switzerland, Spain, Portugal, Greece, and the Roman Catholic portion of the population of

Hungary, to 21 for males and 18 for females in the United States.* The minimum age in Victoria is the same as in the United Kingdom, viz., 14 for males and 12 for females; but, as a matter of fact, marriages are seldom contracted at such early ages. the males, however, who married in 1891 had not completed their eighteenth year. Of the brides, nine had not completed their sixteenth, and 51 more had not completed their seventeenth year. As many as 185 of the males, or one in every 47, and no fewer than 1,553 of the females, or over a sixth, had not attained the full age of 21 years.

542. From the experience of Victoria during the year 1891, and Marriages of the decades 1871-80 and 1881-90, it would appear that, in proportion to the total numbers marrying, the males who marry under age are much less numerous in this colony than in England and Wales. proportion of females marrying under age, which was formerly higher in Victoria than in England, has fallen considerably, and in 1891, as well as in the previous decennial period, was lower than in England. This is shown by the figures in the following table :-

Victoria and Eng-

MARRIAGES OF MINORS IN VICTORIA AND ENGLAND AND WALES.

^{*} The figures, which are those of the Registrar-General of England, add in this line only to 9,500 instead of to 10,000.

544. According to the figures in this table, fewer males marry Marriages of minors in under 20 in Victoria than in any of the other countries named, except different Sweden, Prussia, Bavaria, and Saxony; but, on the other hand, more females marry under that age in Victoria and South Australia, where the proportions are about equal, than in any of those countries except Queensland, New Zealand, England, France, Italy, and Russia. Attention is called to the very large proportion shown as marrying under age in the last-named country, exceeding a third of the total marriages in the case of the males, and exceeding half in the case of the females.

- 545. The births registered in Victoria during 1891 numbered Births, 1891. 38,505, as against 37,578 in 1890. The increase in the year under review, as compared with the previous one, was thus 927.
- 546. During the 20 years ended with 1883, the number of births Births in in Victoria had remained almost stationary; but in 1884 a marked former increase took place, which has continued during the seven subsequent years, the number of births in 1891 being the highest recorded.*
- 547. In proportion to population, the births decreased steadily for Birth rate. a number of years. The lowest point was reached in 1882, since which year there has been a gradual improvement, the birth rate in 1891, although slightly lower than in 1890, having been higher than it had been in any other year since 1876. The following are the birth rates for the last thirty-two years:—

## Annual Birth Rate, 1860 to 1891.

^{*} For number of births in each year, see Statistical Summary of Victoria (first folding sheet). published in the second volume of this work.

Proportion of births to population and to married women.

548. Birth rates, based upon a comparison of the number of events with the total population, are, like marriage rates calculated upon a similar basis, apt to mislead, unless the population is in a normal condition. It must be quite evident that, if there is not a sufficient proportion of married women at the fruitful or child-bearing ages in a community, the birth rate is not likely to be high, but that an excess of such women would probably cause a high birth rate. This will be made apparent by the following table, which shows the birth rate, calculated upon the total population and upon the number of married women at the child-bearing period of life, according to the censuses of 1871, 1881, and 1891:—

## PROPORTION OF BIRTHS TO POPULATION AND TO MARRIED WOMEN.

		Manied Wanner		Proportion of Le	Proportion of Legitimate Births.			
Year of Census.	Enumerated Population.	Married Women under 45 Years of Age.	Legitimate Births.*	Per 1,000 of the Population.	Per 1,000 Married Women under 45 Years of Age.			
1871	731,528	88,561	26,805	36.64	302.67			
1881	862,346	84,831	25,675	29.77	302.66			
1891	1,140,405	120,700	35,853	31.44	297.04			

Reason for fluctuation of birth rate.

549. It will be noticed that although the proportion of legitimate births per 1,000 of the population fluctuated considerably at the three periods, the proportion per 1,000 of the married women at reproductive ages remained tolerably uniform, being 297 per 1,000 in 1891 as compared with  $302\frac{2}{3}$  per 1,000 at each of the two former periods. The increase in the birth rate calculated in the ordinary way, since 1881, is therefore found to be due merely to an increase in the proportion of married women in the community at the fruitful period of life.

Birth rates in Australasian colonies.

550. Returns of the births in all the Australasian colonies are available to the end of 1891, and from these and the mean populations of the respective colonies during each year the birth rates have been calculated in the office of the Government Statist, Melbourne. The following table gives the birth rates of the different colonies for each year from 1865 to 1891, or as many years between those periods as the figures are available for:—

^{*} In each case these are the legitimate births which occurred during the twelve months of which the census was the middle.

551. In 1891 the birth rate was below the average in all the Low birth. colonies except Western Australia and Tasmania. In New South Wales and New Zealand the rate was absolutely the lowest recorded during the whole period of 27 years, that for the latter colony (29 per 1,000), moreover, being the lowest recorded in any colony since 1864; in South Australia, although slightly higher than in the three previous years, it was also lower than in any other year shown in the table; whilst in Queensland it was lower than in the great majority of pre-In Victoria, the rate, although still below the average, vious years. and a shade lower than in 1890, was higher than in any other year since 1876, as has been already stated. In Western Australia it was considerably below the average of the six preceding years, and in Tasmania it was lower than in any year since 1880.

rates in Australasian colonies in 1891.

^{*} See footnote (*) on page 325 ante, which also applies to this table. For the number of births in the various colonies during the nineteen years ended with 1891, see General Summary of Australasian Statistics (third folding sheet) in the second volume. See also Appendix A. to the same volume.

Order of colonies in respect to birth rates.

552. The following is the order of the colonies in reference to their respective birth rates in the last year shown in the table and according to the average of the whole period of twenty-seven years. It will be observed that Victoria stands fifth on the list for 1891, as well as in the twenty-seven year series:—

# ORDER OF AUSTRALASIAN COLONIES IN REFERENCE TO BIRTH RATES.

Order in 1891.

- 1. Queensland.
- 2. Western Australia.
- 3. New South Wales.
- 4. South Australia.
- 5. Victoria.
- 6. Tasmania.
- 7. New Zealand.

Order in a Series of Years.

- 1. Queensland.
- 2. New South Wales.
- 3. New Zealand.
- 4. South Australia.
- 5. Victoria.
- 6. Western Australia.
- 7. Tasmania.

Birth rate in Australia and Australasia.

553. On the continent of Australia, taken as a whole, the birth rate in 1891 was, with the exception of 1877, 1878, and 1882, the lowest recorded during the last nineteen years; and on that continent, combined with Tasmania and New Zealand, it was absolutely the lowest during the whole period. The following are the figures for the period referred to:—

BIRTH RATE IN AUSTRALIA AND AUSTRALASIA, 1873 TO 1891.*

	Year.			Birthsper1,000 Populations.				Births per1,000 Populations.

Birth rates in British

554. The birth rates in certain British colonies outside Australasia possessions. including all those for which the information is available, are shown in the following table. The low birth rate in Hong Kong is probably owing to the small proportion of women in the population, the bulk of which consists of Chinese males. In Mauritius and Jamaica, considerably more than half the births are stated to be illegitimate. some cases the figures are only for one or two years:—

^{*} The rates for all the years since 1881 have been revised in accordance with the results of the census of 1891, since the last publication of this work.

^{*} Mean of three years.

[†] Mean of four years.

Low birth rates in France.

556. Comparing this table with that showing the marriage rates Ireland and in the same countries, it is found that a high birth rate is generally concurrent with a high marriage rate, and vice versa. A notable exception to this is France, in which, although the marriage rate is high, the birth rate is lower than any of the countries named, except Ireland. The low rate in the latter is attributed to the small proportion of women at child-bearing ages in the population,* but the low birth rate in France cannot be accounted for by any such cause, as it is stated that the proportion of women at the reproductive period of life is higher in that than in any other European country; the chief, though indirect, cause is said to be-"the sub-division of land among the peasant proprietors. The better class of the labouring population aspire to become proprietors of small holdings; by thrift and industry they accumulate capital for this purpose, and avoid by their social philosophy the division of their property among a large family at their decease."

Australasian and European birth rates compared.

557. In the same five years the mean birth rate in Queensland was above that in any of the European countries referred to in the table, except Hungary; that in Western Australia above that in any except the country just named, together with Austria, Italy, and Prussia; that in New South Wales was about the same as in Germany, which stood next below the countries just named; whilst the mean birth rates in Tasmania and South Australia were just below those in Germany; the mean birth rate in Victoria was below that in those five European countries, with the addition of Holland; the mean birth rate in New Zealand was below that in any of the countries named in the table except Norway, Belgium, Sweden, Switzerland, France, and Ireland. The following are the birth rates referred to:—

### MEAN BIRTH RATES IN AUSTRALASIAN COLONIES, 1886 TO 1890.

					Number of Mea	of Births per 1,000 an Population.
Queensland			• • •	• • •	• • •	39.06
Western Australia		·			• • •	36.90

South Australia				•••		33.98
Victoria		• • •	• • •	• • •		32.69
New Zealand	• • •	• • •	• • •		• • •	31.21

^{*} See 15th Detailed Report of the Registrar-General of Ireland, pages 12 and 29. years the registration of births in Ireland was admitted to be defective, but Dr. T. W. Grimshaw, the Registrar-General of that country, in a letter addressed to the Government Statist of Victoria, dated 6th May, 1886, stated that since the passing of the Public Health Amended Vaccination and Registration Acts (1878 to 1880), this is no longer the case, and the births occurring in Ireland are now very well recorded. It may be remarked, however, that this improvement has not been accompanied by any improvement in the birth rate as calculated from the published figures. † See 41st Report of the Registrar-General of England, page xlvi.

558. According to the reports of the Registrar-General of England, Birth rate in the births in the United Kingdom have fallen off by nearly 6 per 1,000 during the last 20 years; in 1890 the rate was lower than in any year since 1870, and, for the first time, was less than 30 per 1,000 persons living, as will be seen by the following figures:—

BIRTH RATE IN THE UNITED KINGDOM, 1871 TO 1890.

		Birth the	ns per 1,000 of Population.			Births the	s per 1,000 of Population.

Results compared.

561. It will be noticed that in the first two years of the period to which the table refers the birth rate of the country districts was about equal to that of the metropolis, whilst the birth rate of the extrametropolitan towns was very much higher than either. however, the metropolitan rate has been much above that of the country districts, but until 1882 was still below that of the extra-In 1882 and the subsequent years, however, metropolitan towns. owing to the birth rate of the extra-metropolitan towns and of the country districts having remained tolerably uniform, whilst that of the metropolis has been gradually increasing, the rate in the lastnamed division was much above that in other urban districts. also be noticed that, in 1891, the birth rate in the metropolis was lower than in any previous year since 1886, but in the extra-metropolitan towns it was higher than in any year since 1879, and in the country districts it was higher than in any year since 1878.

Birth rates in metropolitan subdistricts.

562. The mean population, the number of births, and the birth rate during 1891; also the mean annual birth rate during the ten years 1881 to 1890, in the different municipalities, etc., forming the

Note.—It should be specially noted that the births in Public Institutions are eliminated from the individual sub-districts, although included in the total line.

563. It will be observed that during the ten years ended with 1890 Birth rates the births in four municipalities, viz., North Melbourne, Brunswick, Port Melbourne and Footscray, averaged above 40 per 1,000 of the population; that in five municipalities, viz., Collingwood, Richmond, Northcote, Flemington, and Williamstown, they were between 35 and 40 per 1,000; in seven municipalities, viz., Fitzroy, Prahran, South

in sub-districts, 1881 to 1890

^{*} Footscray (Town) was proclaimed a City on the 20th January, 1891.

[†] The population given is that of all the institutions, but the Women's Hospital is the only one in which births occurred.

[‡] Per 1,000 of the population of the whole of Melbourne and Suburbs.

Melbourne, Brighton, Essendon, Hawthorn, and "Remainder of District," they were between 30 and 35 per 1,000; and that in three municipalities, viz., Melbourne City, St. Kilda, and Kew, they were below 30 per 1,000. The lowest rate was in Melbourne City, viz.,  $25\frac{1}{3}$  per 1,000.

Birth rates in sub-districts, 1891. 564. During 1891, the birth rates in all the sub-districts except Melbourne, Fitzroy, Collingwood, Prahran, and South Melbourne cities, were higher than they were in the ten years ended with 1890, but this was more particularly noticeable in Northcote, Essendon, Flemington, Kew, and Williamstown. The sub-districts with the highest birth rates in 1891 were Footscray, with 48 per 1,000, and Brunswick, Northcote, and Oakleigh with over 45, which were followed by Flemington, Port Melbourne, North Melbourne, Williamstown, Essendon, and Richmond in the order named, in all of which the rates were above 40 per 1,000; those with the lowest rates were Melbourne City and St. Kilda, in which the rates were below 30 per 1,000.

Births in Australasian capitals. 565. In 1891, the birth rate in Melbourne was much lower than that in Brisbane or Perth, but above that in Sydney, Adelaide, Hobart, or Wellington, as is shown in the following table, which gives, for that year, a statement of the estimated population and the number of births, and number per 1,000 of the population, in each of those capital cities:—

BIRTHS IN AUSTRALASIAN CAPITAL CITIES, 1891.

			,	Trationation Money	Birth	s, 1891.

			•			

Birth rate in London.

566. The average birth rate in the Australasian capital cities in 1891 was 36.5, that being much higher than the rate in London according to the average of the ten years 1880-89, viz., 33.7, which

^{*} With suburbs.

was somewhat higher than that of England and Wales (32.9) during the same period. The rate in London was thus higher than that in Hobart, or Wellington, but below that in any of the other Australasian cities named in the last table.

- 567. In the five years ended with 1885 the mean birth rate of the Birth rates principal towns of Scotland was 33.76; of the large towns, 33.74; in Scotch towns. and of the small towns, 32.53. All these rates are much below the mean birth rate of the Australasian capital cities or than the birth rate of Melbourne.
  - -...
- 568. By comparing the following statement of the birth rates in Birth rates British towns during 1887 with the figures in the last column of the in British towns. last table, it will be found that the birth rate is higher in Brisbane and Perth than in any of those towns; in Melbourne, than in any except Cardiff, Newcastle, Preston, Glasgow and Portsmouth; in Sydney and Adelaide, than in any except those towns and Manchester and Blackburn; in Hobart, than in any except those named and Sunderland, Norwich, Nottingham, Wolverhampton, Sheffield, Leicester, Bolton, and Birkenhead; and in Wellington it was somewhat lower than the average of 28 British towns:—

Birth rates in Victorian towns.

570. The following are the birth rates in six Victorian towns during 1891; the rate in the metropolis being, as will be observed, below that in Stawell and Bendigo (Sandhurst), but above that in Castlemaine, Geelong, or Ballarat. The proportions on which the results are based have been calculated back from the population as ascertained by the census of 1891:—

#### BIRTH RATES IN SIX VICTORIAN TOWNS, 1891.

	Births per 1,000 of Population.		of Popu	Births per 1,000 of Population.
Stawell	50.28	Castlemaine	•	34.99
Bendigo (Sandhurst)	37.06	$Geelong \dots$		34.24
Melbourne	36.64	Ballarat		32.65

Births of males and females.

571. The births of males in Victoria during 1891 numbered 19,598, those of females 18,907. These numbers furnish a proportion of 103.66 boys to 100 girls. In 1890, the proportion was 104.19, in 1889 as high as 106.05, and in 1888, 104.33; whilst in the ten years 1881-90, 160,057 births of males and 152,508 births of females were registered, giving a proportion of 104.95 boys to 100 girls.

Births of males and females in Australasian colonies. 572. In every country in which births are registered, it is found that more boys are born than girls. This was the case in all the Australasian colonies during the period of nineteen years ended with 1891, although not in every one of those years so far as Western Australia and Tasmania are concerned. The following are the numbers of boys per 100 girls born in the respective colonies during each year of the period referred to:—

^{*} The number of births registered in New York would give a proportion of 22.8 per 1,000 of the population, but it is officially stated that the registered births are 25 per cent. below the actual number which take place, so that the correct proportion is as here stated.

Proportion of Male to Female Births in Australasian Colonies, 1873 to 1891.

			Number of I	Boys to 100 (	Firls Born.		
Year.	Victoria.	New South Wales.	Queensland.	South Australia.	Western Australia.	Tasmania.	New Zealand.

573. In the Australasian colonies, taken as a whole, the proportion order of during the five years ended with 1891 was 104.8 male to 100 female respect to infants. In the different colonies, the proportions ranged from 106.1 sexes or those born. males per 100 females in South Australia to 103.5 males per 100 females in Tasmania. The following is the order of the colonies in respect to these proportions:—

## Order of Colonies in Reference to Proportion of Male to Female Births, 1887 to 1891.

	Boys to 100 Girls.		Boys to 100 Girls.
South Australia	106.08	Victoria	104.52
New South Wales	105.13	Tasmania	103.51
Queensland	104.74		
Western Australia	104.73	${f Mean}$	104.75
New Zealand	104:53		<del></del>

574. The proportions of male to female births in the countries Births of included in the following list have been derived from official sources. The averages for the Australasian colonies extend over the ten years 1881 to 1890, and those for the other countries named extend over periods of various lengths:—

countries.

# PROPORTION OF MALE TO FEMALE BIRTHS IN VARIOUS COUNTRIES.

	Boy	rs to 100 Girls.		Boy	s to 100 Girls.
Greece	•••	112.0	Ireland		105.6

Switzerland	* * *	106.3	Vermont		$105 \cdot 0$
German Empire		106.2	Rhode Island		105.0
Holland		106.1	New South Wales	• • •	104.9
Norway	• • •	106.0	Queensland	• • •	1 <b>04·7</b>
Servia		106.0	New Zealand		104.4
Massachusetts		106.0	England and Wales		104.3
Belgium		105.9	Russian Poland		104.1
Scotland		105.7			

Australasian and other countries compared. 575. It will be observed that the proportion of boys born to girls is in Western Australia below that in 6 countries out of Australasia; whilst the proportion in South Australia, Tasmania, and Victoria, is above that in only 8, and in New South Wales, Queensland, and New Zealand, above that in only 2 of such countries.

Low proportion of boys born in England.

576. In England and Wales the proportion of births of boys to those of girls is not only lower than that in any other European country, except Russian Poland (of which the statistics are of doubtful authenticity), but it has for years past had a tendency to diminish. The proportion given in the table (104.3) is for the fifty-three years ended with 1890, but in the ten years ended with that year, it was only 103.8. The Registrar of England states he is unable to offer any explanation of that "curious fact."*

Twins and triplets.

577. In 1891, 407 twin births and 3 triple births were registered, as against 353 twin births and 3 triple births in 1890. In the ten years ended with 1890, 2,734 cases of twins and 20 cases of triplets were recorded, the total number of births in the same period having been 312,565. There were thus 309,791 confinements in the ten years, and it follows that one mother in every 113 gave birth to twins, and 1 mother in every 15,490 was delivered of three children at a birth. During the previous decade, 1871 to 1880, 1 mother in every 111, on the average, gave birth to twins, and 1 in every 12,796 was delivered of three children at a birth.

^{*} See 43rd Report of the Registrar-General of England, page xvi.

578. It appears that only three of the Australasian colonies Twins and besides Victoria distinguish the double and treble births in their returns. The following are the numbers of such births in each of the four colonies during each of the eight years ended with 1890:—

triplets in Australcolonies.

TWINS AND TRIPLETS IN AUSTRALASIAN COLONIES, 1883 то 1890.

77	Victoria.		New South Wales.		Queensland.		New Zealand.

Note.—Some of the figures in this table have been taken from Mulhall's Dictionary of Statistics. page 50.

^{*} Including one case of quadruplets.

Results in different countries compared. 580. In proportion to the total number of births, fewer births of twins appear to occur in Victoria than in any of the other countries named; moreover, all the Australasian colonies stand low on the list. Ireland, it will be observed, stands at the head of the list, whilst England and Scotland have—excepting the Australasian colonies—only three countries below them. There are no records of treble births in Ireland, Holland, Russia, Switzerland, Scotland, England, or Spain, although doubtless some occur in those countries, where it is possible they are included with the twin births.

Illegitimate births.

581. The illegitimate children born in 1891 numbered 2,064, or 1 to every 19 births registered, which proportion was the same as in the preceding year. In the ten years 1881-90, out of 312,565 infants born, 14,916 were traced as having been born out of wedlock, which numbers furnish a proportion of 1 illegitimate child to every 21 births, as compared with an average during the ten years ended with 1880 of 1 to every 27 births.*

Women living in concubinage.

582. It was shown in a previous table † that the legitimate births registered in the last census year (1891) were in the proportion of 297 to every 1,000 married women living at the reproductive period of life; and that the number of married women at the fruitful or child-bearing age living in the colony during that year was 120,700. Assuming that the illegitimate births bear the same proportion to unmarried women, it also follows, from the number of such births in 1891, that, exclusive of public prostitutes (who, as they rarely have children, are omitted from the computation), at least 6,950 single women at the fruitful or child-bearing ages were living in concubinage. If from the total number of women in the colony between the ages of 15 and 45, 265,100, be deducted the number of married women above referred to, viz., 120,700, the difference will give 144,400 as the number of unmarried women and widows at those ages. It therefore follows that 1 out of every 23 of these was living immorally.

Illegitimacy and concubinage, 1873 to 1891. 583. The following table gives a statement of the number of illegitimate births and their proportion to the total number registered; also the estimated number of women living in concubinage, and their

^{*} For many reasons, statistics of illegitimacy generally understate the truth.—See remarks upon the subject in the *Victorian Year-Book*, 1877-8, paragraph 259.

[†] See table following paragraph 548 ante.

proportion to the total number of single women at reproductive ages living in Victoria, according to the returns of the last nineteen years:--

584. All the Australasian colonies now publish statistics of Illegitimacy illegitimacy. According to these, which possibly may not in every case represent the whole truth,* illegitimacy, over a series of years, was most rife in New South Wales, next in Victoria, next in Western Australia, next in Tasmania, next in Queensland, and least of all in South Australia and New Zealand, and in 1890 the same order prevailed, except that the rate in Tasmania was lower than in Queensland. In most of the colonies, so far as figures are available, illegitimacy appears to have a tendency to increase. The following table shows the percentage of illegitimate to the total births in the various colonies, during a series of years:—

colonies.

Note.—In Western Australia in 1887, the proportion was 4.36, and in 1888, 3.95; but the proportions for 1889 and 1890 do not appear to have been published.

Illegitimacy in United Kingdom.

585. Illegitimacy in England and Wales appears to be commoner than, and in Scotland twice as rife as, it is in any of the Australasian colonies named, except Victoria and New South Wales. In Ireland, on the other hand, it seems to be less prevalent than in any of those colonies except South Australia or New Zealand. This will be observed by comparing the following table with the last one:—

ILLEGITIMACY IN ENGLAND, SCOTLAND, AND IRELAND, 1871 TO 1890.

Period.			Illegitimate Births to every 100 Children born.				
Peno	oa.		England and Wales.	Scotland.	Ireland		
1871-80	• • •	• • •	5.0	8.7	2.4		
1881-85		• • •	4.8	8.2	2.7		
1886	• • •	• • •	4.7	$8\overline{\cdot 2}$	2.7		
1887			4.8	8.3	2.8		
1888	• • •	• • •	4.6	8.1	2.9		
1889			4.6	8.0	2.8		
1890			4.4	1 + 1	2.7		

586. The following figures, taken from various sources, show Illegitimacy certain countries arranged in order according to the extent of countries. illegitimacy prevailing in each, the proportion of illegitimate births being also shown:—

#### ILLEGITIMACY IN VARIOUS COUNTRIES.

Country.	Illegitimate Births to every 100 Children Born.	Country.	Illegitimate Births to every 100 Children Born.
Austria	12:9	Switzerland	$\dots$ 4·6
Denmark	11.2	New South Wales	4.4
Sweden	10.2	Victoria	4.3
Germany (1889)	9.3	Western Australia	$\dots$ 4·2
Belgium (1888-9)	8.7	Tasmania	4:1
Scotland	8.2	Queensland	3.9
Norway (1882-6)	8.1	Holland (1884-8)	3.2
France	8·1	Russia	3.1
Italy	6.8	Ireland	2.7
Portugal	5.6	New Zealand	2.6
Spain	5.5	South Australia	$\dots 2.3$
England	4.7	Greece	1:6

587. According to the figures, more illegitimacy prevails in Austria, Position of Denmark, and Sweden, and less in Greece than in any other countries. respect to In Victoria, illegitimacy appears to be less prevalent than in fourteen, and more so than in nine of the countries.

588. It will be readily supposed that a larger proportion of Illegitimacy illegitimacy prevails in Melbourne and suburbs than in any other country. district of Victoria, and that the proportion in the country districts is the smallest of all. In 1891, in the metropolitan district about 1 birth in 13, in the extra-metropolitan towns 1 birth in 21, but in country districts only one birth in 36 was registered as illegitimate. In the previous year the proportions were 1 in 14, 1 in 23, and 1 in 41 respectively.

589. By the following figures, which, with the exception of those Illegitimacy for Melbourne, have been taken from the annual report for 1886 of cities. the Statistical Department of the Argentine Republic,* it would appear that illegitimacy is less rife in the capital of this colony than in any of the foreign cities named:-

Children to

590. One method* of determining the fecundity of women is to a marriage in Victoria. find the average number of children born to a marriage, which may be ascertained approximately by dividing the legitimate births in any year by the number of marriages in the preceding year. following is the result of such a calculation for Victoria during the eighteen years ended with 1891:—

CHILDREN TO A MARRIAGE, 1874 TO 1891.

	Year.		Legitimate Births.	Marriages in Year prior to that named in first Column.	Average Number of Children to a Marriage.
1874	•••		25,816	4,974	5·19
1875	***	•••	<b>25,941</b>	4,925	5.27

^{*} For another method, based on the proportion of legitimate births to married women, and a comparison of the results for the various Australasian Colonies for 1881, see last issue of this work, Vol. I., paragraph 523.

591. The figures show a steady diminution in the proportion of Decrease in children born, amounting—notwithstanding a slight revival in 1887 and 1888—in the eighteen years to a child and a quarter per marriage, or five children to every four marriages. It is evident that if the births increased with the marriages as they should do, the proportions would remain steady; but this is shown not to be the case. are, however, many matters affecting the birth rates of infants respecting which it is not possible to obtain precise information. The falling off shown by the figures in the last column of the table is a result which, although perhaps it cannot be proved, may be conjectured to be owing to the increasing desire on the part of married women to evade the cares of maternity, and the steps taken by them-often, no doubt, with the concurrence of their husbands—to prevent its occurrence.

in Victoria.

592. According to this mode of reckoning, it would appear that Children to there are, upon the average, fewer children to a marriage in Victoria in Australthan in any of the other Australasian colonies. The following are colonies. the proportions in each colony extending over a series of years:—

asian

CHILDREN TO A MARRIAGE IN AUSTRALASIAN COLONIES, 1880 то 1890.

		Averag	e Number of C	hildren to a M	larriage.	
Year.	Victoria.	New South Wales.	Queensland.	South Australia.	Tasmania.	New Zealand
1880	4.99	5.00	4.89	4.61	• • •	5.54
1881	4.87	5.48	5.09	4.57	•••	5.72
1882	4.32	4.53	4.78	4.59	4.51	5.63
1883	4.16	4.31	4.68	4:34	4.22	5.18
1884	4.08	4.38	4.28	4.57	3.91	5.33
1885	3.97	4.68	4.39	4.60	4.62	5.18
1886	3.97	4.54	4.25	4.46	4.21	4.90
1887	4.07	4.55	4.63	5.34	4.64	5.31
1888	4.23	4.82	4.69	5.17	4.90	5.14
1889	3.86	4.50	4.22	4.83	4.80	4.93
1890	3.88	4.90	4.69	4.90	4.78	4.87
Means	4:22	4:70	4.60	4:73	4:51	5.25

Note.—In Western Australia, the proportion in 1887 was 5.03, and in 1888, 4.61; mean of the two years 4.82.

593. It seems that in all the colonies except Tasmania and South Decrease in Australia there is a tendency for the average number of children to a marriage to decrease in numbers, the proportions in the later years not having been so high as in the earlier years shown in the table. 1890, however the proportions were above the average in all the colonies named in the table except Victoria and New Zealand.

a marriage in each colony.

Children to a marriage in various countries. 594. The following statement of the average number of children born to a marriage in certain countries has been derived from various sources. The figures are generally for a series of years. The country having the highest average is placed first in order, and the remainder in succession:—

#### CHILDREN TO A MARRIAGE IN VARIOUS COUNTRIES.

	Children to each Marriag <b>e.</b>		Ch	nildren to each Marriage.
Ireland	5.46	Scotland	• • •	4.43
New Zealand	$\dots$ 5.25	Holland		4.34
Western Australia	4.82	Victoria		4.22
South Australia	4.73	Belgium		4.21
New South Wales	4.70	England		4.16
${f Queensland}$	4.60	Sweden		4.01
Italy	4.56	Denmark		3.55
Tasmania	4.51	France		2.98

Position of Victoria in reference to births to a marriage.

595. Ireland is at the head of the list, but it may be questioned whether the high proportion prevailing there does not in some degree result from the fact that the registration of marriages* is more defective than that of births. Ireland is closely followed by five Australasian colonies, after which comes Italy, and then Tasmania. Ireland, Italy, Scotland, and Holland are the only countries out of Australasia which stand above Victoria.

Births in each quarter.

596. According to the registrations, births in Victoria are always most numerous in the winter quarter, and next so in the autumn quarter. The proportion of births in the spring and summer quarters varies in different years, the advantage being generally in favour of the former. The following are the numbers and percentage for 1891, and the percentages for two previous decennial periods:—

#### BIRTHS IN EACH QUARTER.

	One when on ded	43	Year	1891.	Percentage in	Percentage in Ten Years—		
Seasons.	Quarter ended of last day of-	on the	Number of Births.	Percentage.	1881 to 1890.	1871 to 1880

${f Winter}$	September		$10,\!428$	27.04	26.73	27.15		
Spring	December	, , ,	9,476	24.66	24.15	24.01		
	Year	•••	38,505	100.00	100.00	100.00		

^{*} See footnote (¶) to table following paragraph 497 ante.

597. In the following table the average proportion of births Births in occurring in each quarter in Victoria during a series of years is com- quarter in pared with that proportion in the opposite, and consequently (so far countries. as seasons are concerned) corresponding, quarter in certain countries of the northern hemisphere. The figures for such countries have been taken from Mr. Mulhall's work*:—

#### Percentage of Births in each Quarter in Various COUNTRIES.

			Quarter ending of	n the last day of—	
Countries	j <b>.</b>	March in Victoria, September in the other Countries (Summer)	June in Victoria, December in the other Countries (Autumn).	September in Victoria, March in the other Countries (Winter).	December in Victoria, June in the other Countries (Spring).
Victoria (188	31-90)	$egin{array}{c}  ext{Per Cent.} \ 23.6 \end{array}$	Per Cent. 25·5	Per Cent. 26.7	Per Cent. 24·2
England	•••	24:0	23.8	26.2	26.0
France		24.0	$24\cdot 1$	27.0	24.9
Germany	• • • •	25.0	24.9	25.9	$24\cdot 2$
Sweden		23.7	25.7	26.8	23.8
Italy	• • •	23.7	24.7	27.5	· 24·1
Russia	• • •	24.7	23.7	25.6	26.0

598. It appears that in most countries the largest number of Quarters in births take place in what may be called the winter quarter (ending September in Victoria, March in the other countries named), the exception being Russia, in which most births occur in the spring quarter. Fewest births occur in what may be called the summer quarter (ending March in Victoria, September in the other countries named), except in Germany, where the proportion in the spring quarter is the smallest, and in England and Russia, where it is the smallest in the autumn quarter.

- 599. The deaths registered in 1891 numbered 18,631, as against Deaths, 1891. 18,012 in 1890. The increase in the year under notice was thus 619, or  $3\frac{1}{2}$  per cent.
- 600. In 1889 for the first time, the deaths exceeded 19,000, and Deaths, although those in 1891 did not reach that number, they were more numerous than those in any other previous year. In 1887 and 1888 they did not much exceed 16,000; in 1886 they numbered less than 15,000, but in only one prior year, viz., 1875, did they reach that

former years.

^{*} Dictionary of Statistics, page 49.

number.* The high mortality in the last-named year, in which 15,287 deaths were recorded, was due to the prevalence of measles and scarlatina in an epidemic form.

Excess of births over deaths.

601. The births in 1891 exceeded the deaths by 19,874 or 107 per cent., the corresponding proportion being 109 per cent. in the previous year. The proportion in 1891 was exceeded in all but eight of the previous twenty-five years. In the ten years ended with 1890 the proportion averaged 107 per cent.; and in the ten years ended with 1880 it averaged 119 per cent.; whilst during the whole period of twenty-six years ended with 1891 the average was 116 per cent. The following were the births and deaths in each of those twenty-six years, and the excess of the former over the latter:—

Years in which births doubled deaths.

602. It will be noticed that the births more than doubled the deaths in all the years except 1875, 1876, 1882, and 1889.

^{*} For the number of deaths during each year since the first settlement of Port Phillip, see Statistical Summary of Victoria (first folding sheet) in the second volume.

603. Of the Australasian colonies, New Zealand is the one in which excess of the births almost invariably exceed the deaths by the highest proportion, although an exception to this rule took place in 1891, when the proportion was highest in Queensland. This is due to the low death rate prevailing in that colony, resulting no doubt from the salubrity of the climate of New Zealand, but still more so from the circumstance of the population being spread over the country or dispersed throughout a number of small towns, instead of being to a great extent crowded into a few large cities, as is too much the case in the other The position of Victoria in regard to the proportionate increase of births over deaths, although higher than that in most countries, is below that in any of the other colonies of the group. The following table shows the percentage of excess of births over deaths in each of the Australasian colonies during the respective years 1882 to 1891, both inclusive. The colonies are arranged in order, that with the highest mean percentage being placed first, and that with the lowest last:-

Excess of births over deaths in Australia and elsewhere.

606. It will be observed that deaths bear a much larger proportion to births in all the countries named than they do in any of the Australasian colonies, part of which difference is probably due to the Australian climate being more healthy and the circumstances of the colonies more favourable to longevity, and part to the fact that the countries named contain a larger proportion than the colonies of the young and the very old. In not one of those countries did the births double the deaths in any year of the period. On the other hand, in the Australasian colonies, it is the exception for the births not to double the deaths, and in one of them (New Zealand) it is the rare exception for the births not to be three times as numerous as the deaths.§ It will, moreover, be noticed that the deaths exceeded the births in France in 1890.

Natural increase of

607. During the ten years 1882-1891, the population of Victoria population increased at the average rate of 1.66 per cent. by excess of births over deaths, at which rate, irrespective of immigration, the population would double itself in 42 years. The rates varied from a minimum of 1.49 in 1882 to a maximum of 1.77 in 1890, as will be seen by the following figures:—

> INCREASE OF POPULATION BY EXCESS OF BIRTHS OVER DEATHS, 1882 то 1891.

- 610. According to the figures, the rate of natural increase (excess Results in of births over deaths) is a fraction higher in Servia than in Victoria, but with this exception, the rate in every one of the Australasian colonies is higher than in any of the countries named. It will be noticed that England and Wales stands near the head of the list, Scotland lower, and Ireland very much lower, also that in France the rate of natural increase is much below that in any other country.
- 611. In Victoria, deaths of males in 1891 numbered 10,666, and Deaths of These numbers furnish a proportion of females. deaths of females, 7,965.

nearly 75 females to every 100 males, as against a proportion of 74 females to every 100 males in the ten years 1882-91, and of 75 to every 100 in the ten years 1872-81. Females in the total population were in the proportion of 90 to every 100 males during 1891 and the last decennial period, and 88 during the preceding decennium; therefore at each period more males and fewer females died than their relative numbers in the population might have given reason to expect.

Annual death rate.

612. The following table shows the estimated mean population of either sex, the number of deaths of either sex, and the death rate of males and females, and of both sexes, during each of the last thirty-one years:—

Annual Death Rate, 1861 to 1891.

Year.  1861 1862 1863 1864	Males.  324,988 322,916 325,680	Females.  214,836	Males.	Females.	Males.	Females.	Total.*

		age of thirty	<u> </u>	·	16.90	$\frac{1 \pm 63}{14.59}$	15.83

Note.—In 1861, 1866, and 1875, and to a certain extent in the preceding and in the succeeding years, the death rate was swelled by epidemics of measles and scarlatina.

^{*} The total mean population and the total deaths in each year may be obtained by taking the sum of the figures in the male and female columns.

613. It will be noticed that in all the years, except 1861 and 1862, Male and death bore more hardly upon males than upon females. The figures in the lowest line of the table show that, over a period of thirty-one years, the death of males per 1,000 of the same sex living exceeded by  $2\frac{1}{3}$  the deaths of females per 1,000 of that sex living.

death rate compared.

- 614. In countries in which the climate is healthy, hygiene properly Normal attended to, and the population in a normal condition as regards age, the ordinary mortality incident to human nature would probably cause the death rate to be in the proportion of about 17 per 1,000 persons living. It should, however, be borne in mind that these conditions rarely prevail in newly settled countries, and consequently the death rates based merely upon the total population, in common with birth and marriage rates, calculated upon a like basis, are not fair tests of the state of a community. If the proportion of very young or old people is high, the death rate will also be high; but if, on the other hand, the number of persons at the middle ages is excessive, the death rate will be low. It will be remarked that the mortality exceeded 17 per 1,000 eight times in the thirty-one years named in the table, but over the whole period it has averaged less than 16 per 1,000. In the last fifteen years it has only thrice been so high as 16 per 1,000, whilst in five of those years it was below 15 per 1,000, in one being even below 14 per 1,000.
- 615. In 1871 the death rate of both males and females was the Low morlowest recorded during the whole period of thirty-one years, after census which and the death rate in 1880, the next lowest rate was in 1881; years 1871 and 1881. it thus happened that those two successive census years, viz., 1871 and 1881, were years of exceptionally low mortality. Such a circumstance occurring at two successive census periods is apt to mislead those who attempt, without due allowance, to base conclusions upon the relation which exists between the number of deaths and the population of the colony, as derived from the results of the census years alone.

tality in

616. In 1891, the death rate of both males and females was con-Death rate siderably lower than in 1889, but slightly higher than in 1890, and much higher than in any other year since 1876. Taking the total of the two sexes, the death rate in 1891 was slightly higher than in 1890, and not quite  $\frac{1}{2}$  per 1,000 above the average of the whole period; it was exceeded in 9 of the previous 30 years.

1891 and previous

617. The proportion which the deaths that occurred in each Death rates Australasian colony bore to the total population of that colony during each of the twenty-seven years from 1865 to 1891 will be found in the following table:—

in Australasian colonies.

DEATH RATES IN AUSTRALASIAN COLONIES, 1865 TO 1891.*

Normal

618. In the twenty-seven years over which the observations in colonies. extend, the normal death rate of 17 per 1,000 persons living was reached in Queensland fourteen times, in Victoria five times, in New South Wales and South Australia four times, in Tasmania three times, and in New Zealand not at all. In the last twenty of those years it was reached six times in Western Australia. Queensland is the only one of the colonies in which, over a series of years, the death rate has exceeded 17 per 1,000.

^{*} The rates for all the colonies, except Victoria (which had previously been corrected) and Western Australia, have been amended since last publication in accordance with revised estimates of population based on the results of the census of 1891. For the number of deaths in the various colonies during the last nineteen of the years named, see General Summary of Australasian Statistics (third folding sheet) in the second volume.

[†] For remarks on the coincidence of fluctuations in the death rates of the different colonies, see last issue of this work, Volume I., paragraph 551.

619. According to the average of a series of years, the death rate order of of Queensland was much higher, and that of New Zealand much respect to lower, than that of any of the other colonies; next to Queensland in this respect stands Western Australia, and then follow-with death rates differing but slightly from one another-Victoria, Tasmania, and New South Wales; whilst the average rate in South Australia is lower than that in any except New Zealand. In 1891, the death rate of Victoria was considerably higher than that of any of the other colonies except Western Australia. The following is the order of the colonies in reference to their respective death rates; the colony with the highest rate being placed first, and that with the lowest last:—

ORDER OF AUSTRALASIAN COLONIES IN REFERENCE TO DEATH RATES.

Order in 1891.

- 1. Western Australia.
- 2. Victoria.
- 3. Tasmania.
- 4. New South Wales.
- 5. South Australia.
- 6. Queensland.
- 7. New Zealand.

Order over a Series of Years.

- 1. Queensland.
- 2. Western Australia.
- 3. Victoria.
- 4. Tasmania.
- 5. New South Wales.
- 6. South Australia.
- 7. New Zealand.

620. The death rate of the colonies situated upon the continent of Death rate Australia taken in combination, and the death rate of those colonies with the addition of Tasmania and New Zealand, are shown in the following table for the nineteen years ended with 1891:—

and Australasia.

DEATH RATE IN AUSTRALIA AND AUSTRALASIA, 1873 TO 1891*.

^{*} Since last publication of this work, the rates for 1881 and subsequent years have been corrected in accordance with the results of the census of 1891.

Normal death rate and Australasia.

621. It will be noticed that in 1875 and 1876 the mortality on the in Australia Australia continent exceeded 17 per 1,000, but in no other years; also that it exceeded that rate upon the continent combined with the colonies of Tasmania and New Zealand only in 1875. It will further be noticed that in 1891 the rate for the continent, as well as that for the whole of Australasia, was higher than in 1890, but about  $\frac{2}{3}$  per 1,000 below the average of the last nineteen years.

Death rates in certain British possessions.

622. The following table shows the death rates in as many British colonies outside Australasia as the particulars are available for. In many cases the average extends only over a short period, and in few, if any, of the colonies are the conditions affecting the duration of human life similar to those prevailing in the Australasian group:—

^{*} Inclusive, it is believed, of still-births, which are recorded as deaths.

623. In all the European countries of which the information is at Death rates hand, except Sweden and Norway, the mean annual death rates are countries. higher than in Queensland, and much higher than in any of the other Australasian colonies. Moreover, in all, with the exception of Norway and Sweden, the mean rate is above 17 per 1,000, and, with the same exceptions, in not one of those countries did the rate during any of the years named ever fall as low as 17 per 1,000; whilst in Hungary, on the other hand, the average rate amounts to nearly twice that proportion. In the following table, the countries are arranged in the order of their mean death rates, as shown in the last column:—

DEATH RATES IN EUROPEAN COUNTRIES, 1886 TO 1890.

		Number of Deaths per 1,000 of Mean Population.

Death rates in town and country, 1891.

625. In every country the death rate is higher in towns than it is in extra urban districts. This circumstance, although no doubt partly attributable to the superior healthfulness and immunity from contagion prevailing in the latter, is also to a great extent due to the fact that hospitals and charitable institutions, which are frequented by patients from the country as well as by town residents, are generally situated in the towns; and further, that outside of charitable institutions many persons die who have come from the country on the approach of serious illness for the sake of the superior nursing and medical attendance to be obtained in town. In 1891, the death rate was much lower in Melbourne and suburbs than in the country towns, whilst in the former it was nearly twice as high, and in the latter more than twice as high as in the country districts. The rate in Melbourne was considerably below, but that for country towns and for rural districts was much above, the average of the previous ten The following are the figures:—

DEATHS IN URBAN AND COUNTRY DISTRICTS, 1891.

			Deaths, 1891.

1879		19.23	18.65	9.17	14.53
1880	• • •	18.70	17:65	8.13	13.70
1881	•••	$19 \cdot 32$	19.39	8.01	14.16
1882	• • • •	21.02	20.24	8.95	15.32
1883		19.46	19.08	8.30	14.29
1884	•••	20.54	18.73	7.89	14.48
1885		20.15	18.88	9.03	15.01
1886		20.42	19.02	8.84	15.18
1887		21.25	20.40	8.75	15.74
1888		20.52	19.65	8.76	15.44
1889		23.39	22.07	10.39	17.78
1890		19.63	21.58	10.09	16.10
1891		19.05	22.79	10.45	16.24

Note.—In 1875, and to a certain extent in the preceding and succeeding years, the death rate was swelled by epidemics of measles and scarlatina.

627. It will be noticed that in thirteen of the years, including Normal eight of the last ten, the death rate in Melbourne and suburbs was intown and higher than that in the other town districts; but in 1890, 1891, and the other four years the death rate in the extra-metropolitan towns was the higher. The greater mortality in proportion to population prevailing in the urban than in the country districts is very striking in all the years. In the former the mortality was invariably much above the normal 17 per 1,000 persons living, whilst in country districts it was always very considerably below that rate. It will also be noticed that the death rate in 1891 in the two extra-metropolitan districts was higher than in any previous years shown in the table, except 1875 and 1876; but the rate in Greater Melbourne was lower than in any previous year except 1880, being in striking contrast with the exceptionally high rate of 1889.

628. In England and Wales, during the ten years 1881-90, the Death rates death rate in urban districts was 20.3 per 1,000, and in country country districts, 17.3 per 1,000; the difference between the these rates being England. not nearly so great as in similar divisions of Victoria.‡

country.

districts of

‡ See 53rd Report of the Registrar-General of England, page li.

^{*} The rates for these districts for the last ten years have been revised since last publication to accord with amended estimates of population.

[†] The death rate in Greater Melbourne would be considerably reduced if the deaths which occurred in the metropolitan hospitals, asylums, etc., should be eliminated from the total. In 1891, it would be reduced to 15.75 per 1,000 persons living.

Death rates in Melsuburbs.

629. The following table shows the mean population, the number of bourne and deaths, and the proportion of the latter to the former, in 1891, also the number of deaths to every 1,000 persons living during the period of ten years ended with 1890, in each of the different municipalities and other sub-districts forming the component parts of the districts of Melbourne and suburbs (Greater Melbourne). In order to render the rates of the various districts comparable as far as possible, the deaths in hospitals and similar institutions have been eliminated from the districts in which they occurred, and are shown separately near the foot of the table:—

DEATHS IN GREATER MELBOURNE.

^{*} For changes in the constitution of municipalities, see footnotes to table following paragraph 240 ante.

** Per 1,000 of the population of the whole of Melbourne and suburbs.

[†] In order to compare the death rate with density of population, see table following paragraph † Average of 7 years. 202 ante. § Average of 8 years.

[|] Includes the Melbourne, Alfred, Women's, and Children's Hospitals, and the Immigrants' Home (partly also in South Melbourne), all situated in Melbourne City; the Benevolent Asylum, which is on the boundary between North Melbourne and Melbourne City; the Homœopathic Hospital, which is in South Melbourne; the Home of the Little Sisters of the Poor, which is in Northcote; the Metropolitan Lunatic Asylum, which is in Kew; and the Yarra Bend Lunatic Asylum and the Austin Hospital for Incurables, which are in "Remainder of district."

- 630. It will be observed that in 1891 the death rates were above Death rates the average of the decennial period in St. Kilda, Brighton, Essendon, series of Flemington, and Footscray; but the excess was not great in any case. In the other sub-districts there was a smaller rate of mortality, more especially in North Melbourne, Fitzroy, Collingwood, Richmond, South Melbourne, and Kew.

death rate was highest

631. The only sub-districts which, according to the average of ten Places in years, had a higher death rate than 19 per 1,000* are the low-lying localities of Collingwood, Port Melbourne, and Richmond; the next and lowest. highest death rate pevailed in the densely populated suburb of North Melbourne, and next in Brunswick and Footscray. In 1891 the highest death rate was in Footscray, which, with Port Melbourne, were the only districts with a rate exceeding 18 per 1,000; then followed in the order named, Brunswick and Collingwood, with rates of nearly 18 per 1,000. During the period of ten years, after the shipping, the lowest death rates were in Kew and Essendon; the next in Hawthorn, St. Kilda, and Brighton; and the next in Flemington, and the "Remainder of district." In 1891 the lowest death rate was in Kew, the next in Essendon and Oakleigh, and the next in Hawthorn, St. Kilda, "Remainder of district," and Northcote—in all of which districts the death rate was below 15 per 1,000.

632. It should be pointed out that in determining the relative Influence of healthfulness of various localities a reference to the order of the death on morrates alone will not suffice, as, in consequence of the excessive mortality which attends the period of infancy, a high death rate is generally found to be concurrent with a high birth rate, as in the case of Footscray, Port Melbourne, and Brunswick, which stand first in regard to death rates, and are also first, or nearly so, in regard to birth rates. Then again, Oakleigh, Essendon, Northcote, Flemington, and Williamstown have birth rates considerably above but death rates below the average, and, consequently, may be ranked amongst the most salubrious districts; whereas Melbourne, with a death rate slightly above the average, but a birth rate below that in any of the other sub-districts, is, in reality,

^{*} It should be remembered that the deaths in hospitals, asylums. etc., have been eliminated from the various sub-districts. If this had not been done, the death rates of several sub-districts would have been much higher than those shown in the table.

much more insanitary than the former indicates. In districts where like birth rates prevail, the position of the death rates may generally be relied upon as an adequate guide to their relative hygienic condition.

Sub-districts with deaths rates over 17 per 1,000.

633. The death rate of Greater Melbourne, taken as a whole, in the calculation of which the deaths in charitable institutions are included, was about 19 per 1,000 persons living in 1891, or 1½ per 1,000 lower than the average during the period of ten years. During the last named period the annual death rate was below 17 per 1,000 in all the sub-districts except North Melbourne, Fitzroy, Collingwood, Richmond, Brunswick, South Melbourne, Port Melbourne, and Footscray; and during 1891 it was below 17 per 1,000 in all the sub-districts except Collingwood, Brunswick, Port Melbourne, and Footscray. It will be borne in mind that the deaths in hospitals, asylums, etc., are excluded from the returns of the individual districts; if such deaths should also be excluded from the total, the deaths in Greater Melbourne would only number 7,744, or a proportion of 15.75 per 1,000 living, a similar proportion for the ten years ended with 1890 being 16.96.

Deaths in Australasian capitals, 1891.

634. In 1891, according to the following figures, the death rate of Melbourne was lower than that of Perth or Hobart, but much higher than that of any of the other Australasian capital cities. In 1881, or ten years previously, the death rate in Adelaide was higher than in Melbourne or any other capital; whilst that of Sydney was only slightly lower than in Melbourne; but the returns indicate a marked decline in the mortality of those cities since 1881. There is reason to believe, however, that in some of the colonies the metropolitan radius, so far as the deaths are concerned, is smaller than that for which the population is returned. In such cases the death rate would obviously appear to be lower than it really is. It should, moreover, be mentioned that the death rate of Melbourne is swelled by the large number of country residents who are admitted to and die in the metropolitan In the Wellington returns, and possibly in those of some other of the capital cities, it is the custom to eliminate such entries, and it is probable that in Melbourne such deaths bear a higher proportion to the total number of deaths recorded than they do in any other of the capital cities named:

Kingdom.

DEATHS IN AUSTRALASIAN CAPITAL CITIES, 1881 AND 1891.

Capital Cities.*			Estimated Mean Population,	Deaths, 1891.	Number of 1,000 of the	Deaths per Population.
			1891.		1891.	1881.

635. According to the following figures, showing the death rates Death rates in the principal towns in the United Kingdom, and the figures just given (for 1891) showing the death rates in Australasian capital cities, the death rate is apparently lower in Brisbane, Wellington, or Sydney, than in any British town; in Adelaide, than in any except Brighton; in Melbourne, than in any except that town and Derby and Nottingham; whilst the death rate in Perth is higher than in all of the towns given in the list except Dublin, Manchester, and Preston; and that in Hobart higher than in all except those towns together with Blackburn and Newcastle:-

^{*} With suburbs. † There are some doubts as to whether the populations of Sydney, Brisbane, and Adelaide in 1891 are not given for larger areas than those on which the deaths were registered. If this should be the case, the death rates for those cities, as shown in the table, would, as a matter of course, be lower than the true rates. It is otherwise difficult to understand how the death rates of Adelaide, Sydney, and Brisbane could have fallen from 231, 19, and 183 per 1,000 respectively in 1881 to 17,  $16\frac{1}{3}$ , and 14 in 1891.

[‡] Census figures.

Towns
having
highest
and lowest
death rates

636. It will be noticed that the death rate is higher in Dublin than in any other large town in the United Kingdom. In this respect it contrasts very unfavourably with London, which is one of the towns in which the death rate is lowest. Manchester is one in which the death rate had always been, and continued to be, highest; but Liverpool, which some years previously stood at the very head of the list, had, in 1887, six towns above it, and stood immediately above Glasgow. In Birmingham the mortality was comparatively low, and approximated closely to that of London.

Death rates in foreign towns.

637. The death rates in all the Australasian capitals will be found to be considerably lower than the average death rates of most of the 51 Colonial and Foreign towns named in the subjoined list:—

## DEATH RATES IN 51 COLONIAL AND FOREIGN TOWNS, 1878-80.*

Death rates in Victorian towns.

638. Of the 4 principal towns in Victoria next in importance to Melbourne, all had a higher death rate than that city; but in only one of them—Castlemaine—was the death rate as high as in the majority of Colonial and Foreign towns just referred to. This will be seen by the following figures:—

^{*} Except where other years are specially given. Many of the figures are taken from Mulhall's Dictionary of Statistics (1891), page 174.
† In 1889, the proportion was 34.36 per 1,000 living.

## DEATH RATES IN 5 VICTORIAN TOWNS, 1891.

	per 1,000 of the pulation.		Deaths per 1,000 of the Population.
1. Castlemaine 2. Geelong	$\frac{31.31}{22.80}$	4. Ballarat 5. Melbourne	$19.55$ $$ $19.05$
3. Bendigo (Sandhurst)	22.50	0. 1.101.00d1H0	1300

639. The mortality of Victoria is highest in the first five months Deaths in and in the last month of the year. The relative mortality of the month. various months fluctuates, however, in different years. According to the average of the decennium ended with 1890, the months in which most deaths occur appear to be January, March, and December, and then April, February, May, in the order named; whereas in the preceding decennium fewer deaths occurred in December than in any of the other months just named. In the year under review more deaths occurred in October, December, and November, than in any other months. The number of deaths in each month of 1891, and their percentage to the total number in the year, also the percentage of the deaths in each month of the decennial periods ended with 1880 and 1890 to the total number of deaths during the same periods, will be found in the following table:—

DEATHS IN EACH MONTH.

Months.		Year	1891.	Percentage in—			
		Number of Deaths.	Percentage.	Ten Years: 1881 to 1890.	Ten Years: 1871 to 1880.

November		1,689	9.07	7.62	7.12		
December	•••	1,715	9.20	9.46	8.45		
Total		18,631	100.00	100.00	100.00		

640. In Victoria the summer is the most trying portion of the Deaths at year, especially to invalids and young children. It is not astonishing, therefore, that most deaths usually occur during that period. to the summer, the autumn quarter is usually the most fatal, then the spring, and lastly the winter; but in 1891 there were more deaths in the spring than in either the summer or the autumn quarter, and fewer in the autumn than in the winter. In the United Kingdom, on

the contrary, the greatest mortality occurs in the winter, and the least in the summer quarter. A statement of the relative mortality of the different seasons in Victoria, according to the experience of the past year and the two last decennial periods; in England and Wales, according to the experience of thirty-one years; in Scotland, according to the experience of ten years; and in Ireland, according to the experience of five years; together with the mean temperature in each quarter in Melbourne and Greenwich, will be found in the following table:—

RELATIVE MORTALITY OF EACH QUARTER IN VICTORIA, ENGLAND, SCOTLAND, AND IRELAND.

			Deaths per 100 at all Seasons.								
Seasons.*	in Sl	nperature nade.		Victoria.		England and Wales.	Scotland.	Ireland.			
Nousons.		Greenwich, England.	Year 1891.	Average of Ten Years, 1881 to 1890.	Average of Ten years, 1871 to 1880.	Average of Thirty - one Years.		Average of Five Years.

Year	57.6	49.4	100.00	100.00	100.00	100.00	100.00	100.00			

Deaths of Chinese gines.

641. The Chinese who died in 1891 numbered 278—of whom 1 and Abori- was a female; and the Aborigines who died numbered 18—of whom 1 (an adult) was probably a half-caste. The former furnish a proportion of about 30 and the latter of 32 to every 1,000 of their probable numbers. In the same year the proportion of deaths of all races to every 1,000 of the population was 16.24.

Ages at Aborigines.

642. In 1891 only 1 of the Chinese who died was under the age Chinese and of 5 years, and only 21 others were under 45 years of age; the great majority, or more than half, were between 45 and 65; whilst the oldest were said to be aged 80, 82, 82, 84, and 84 respectively. Of the Aborigines who died, five were under 5, whilst one (a female) was stated to have attained the age of 80.

Deaths at each age, 1891, and 1881-90.

643. The following table shows the number of deaths at various periods of age registered in Victoria during the year 1891, and during the decennial period 1881-90; also the proportion of the deaths at each age to the total at all ages:—

^{*} The summer, autumn, winter, and spring seasons in Victoria approximate to the quarters ending on the last day of March, June, September, and December respectively; and in the United Kingdom to those ending on the last day of September, December, March, and June respectively.

DEATHS AT EACH AGE, 1891, AND 1881-90.

644. It will be noticed that in the period of ten years, over one-Proportion third of the males and nearly two-fifths of the females who died had different not reached their fifth year; that a fourth of the males and not quite a third of the females were between 5 and 45 years of age; that nearly a fourth of the males, but only a sixth of the females, were between 45 and 65 years of age; and that about a sixth of the males and more than an eighth of the females were over 65 years of age; it will moreover be found that, on the average, the females who died were about 15 years younger than the males—about half the former being under and half over 17 years of age, whilst about half the latter were under and half over 32 years of age. Owing to the growing proportion of elderly people in the population, the proportions in 1891 are, it will be observed, higher at all age-periods over 55, but lower at all other ages, except 25 to 35 in the case of females.

645. Amongst the influences which tend to impair the efficacy of Proportion the ordinary death rate as a standard for comparing the hygienic at each conditions of one country with those of another, or those of the same population

age to

country at different periods, the most important is the variation in the age constitution of the living population, a disturbing influence which can only be eliminated by ascertaining the death rates at various age periods. The exact ages of the population of Victoria having been ascertained at the censuses of 1881 and 1891, accurate results for comparisons are obtainable for this colony. These are shown in the following table by taking into account at successive age periods the numbers of the population and the deaths for the year 1891, and for the previous ten years:—

Proportion of Deaths to Population at each Age, 1881-90 and 1891.

	Mean Pop	oulation.	Dear	ths.	Deaths p	
Ages.	Ten years 1881 to 1891.	Year 1891.	Mean of ten years 1881 to 1890.	Year 1891.	Mean of ten years 1881 to 1890.	Year 1891

^{*} The figures in this column, being derived from the numbers returned at the censuses of 1881 and 1891, both of which were taken at the beginning of April, represent the mean of a decennial period commencing and ending three months later than that for which the deaths are given in the next column but one, viz., that ended with the 31st December, 1890.

646. Comparing the figures in the last two columns, it is found Death rate that, as regards both males and females, whilst in 1891 the total mortality at all ages was greater than the average of the previous decade, this excess was confined to children under 5 years and to persons at all periods over 35 years of age, the proportion of the deaths at all periods between 5 and 35 years to the population at the same ages being less in 1891 than that in the decennial period.

1891, and compared.

647. The ages of the population of Victoria as ascertained at the Death rate censuses of 1871, 1881, and 1891, in conjunction with the recorded deaths at different ages, afford a fairly reliable basis for calculating the death rates of males and females at different ages during the last Such results are compared in the following table, the two decades. increase or decrease at each age being also shown:

1871-30 and 1881-90

DEATH RATE AT EACH AGE, 1871-80 AND 1881-90.*

Death rate in Victoria and other countries compared.

650. It will be noticed that the mortality of males at the ageperiod 20 to 25 and at all age-periods over 45, and that of females at the age-periods 25 to 45 and 65 to 75, is higher in Victoria than in England; it is higher than that of France, in the case of males at from 35 to 75, but lower in the case of females at all ageperiods, although the excess at the age-period 45 to 55 is very slight; and it is lower than that of Germany, in the case of both males and females, at all periods of life.

Death rate of children less in Victoria than elsewhere.

651. It is very commonly believed that the conditions of life in Victoria are more fatal to children than those conditions in older countries; but the figures in the table prove the fallacy of this opinion so far as England, France, and Germany are concerned—the low mortality in Victoria, as compared with that obtaining in either of those countries, being especially marked at the age-periods under ten years.

Death rate of males in Victoria and other countries.

652. According to the table, the death rate of females exceeds that and females of males at from 15 to 20 and from 25 to 35 in Victoria during a term of years); at from 10 to 20 in England and Wales; at from 10 to 15

and from 25 to 35 in Germany; and at from 5 to 15, from 35 to 55, and from 65 to 75 in France; moreover, in England and Wales, at from 5 to 10, the death rates of males and females are equal. At every other period of life the death rate of males exceeds that of females in the countries named.

653. Mr. Mulhall gives the death rate at various ages for different Death rate countries,* and these, with the figures for Victoria and Germany the former of which will be found at almost every age much lower countries. than those for any of the other countries—are subjoined:—

DEATH RATE AT VARIOUS AGES IN DIFFERENT COUNTRIES.

Countries		Numb	er of Death	s per 1,000 l	iving at eac	eh Age.	
Countries.	Under 5.	5 to 10.	10 to 25.	25 to 45.	45 to 55.	55 to 65.	65 to 75.
Victoria	42.12	4:0	4.5	9.1	17:1	28.4	55.7
England	63.6	6.6	5.5	10.2	17.4	31.8	64.3
United States	58.8	10.1	5.4	10.8	17.6	27.2	51.4
France	75 6	$9 \cdot 2$	8.8	12.7	16.6	28:3	66.3
Prussia		$9\cdot 2$	6.4	11.5	18.6	33.0	64.5
Germany	77:3	8.7	5.6	11.1	182	36.4	78.1

Belgium	68.1	$12^{.}7$	8.1	12.9	19.0	32.3	74.5
Sweden	<b>57</b> ·6	8.0	4.8	8.2	14.7	27.4	62:6

654. The figures indicate that at age-periods under 25, the death Death rate rate in Victoria is lower than that in any of the other countries named; between the ages of 10 and 65 it approximates closely to that in Sweden—the latter country having generally somewhat lower rates; between the ages of 25 and 65 it approximates to that in England and the United States; and between 45 and 65 to that in France.

at various ages in different countries compared.

655. It has often been pointed out in the Victorian Year-Book "Ordinary" that the ordinary mode of computing the death rate at all ages, viz., by comparing the total number of deaths of either sex with the number of the same sex living—although that adopted in every country which publishes Vital Statistics—gives results which are misleading for the purpose of comparing the mortality of one country with that of another, or the mortality of a country at one period with the mortality of the same country at another period, unless the proportions living at different ages are identical in the two countries or at the two periods

death rate reliable.

^{*} Dictionary of Statistics (1892), page 174.

respecting which it is desired to make comparison, which is seldom if ever the case. To render accurate comparisons possible, it therefore becomes necessary to devise a mode of computing the total death rate whereby the ages of the population might be taken into account.

Mode of computing "Adjusted death rate."

656. Several modes have been proposed to effect this object*; of which the mode probably least open to objection is that termed the "Adjusted death rate." This is obtained by applying the rates of mortality actually experienced at the various age-periods during any period to a certain standard population, in which the proportions living at the various ages are in a normal condition, and after finding the total number of deaths which would, according to the actual experience have occurred amongst such a population, calculating therefrom the average rate of mortality (or "Adjusted death rate"). The standard population selected is shown in the following table; also the method of calculating the "Adjusted death rate," the deaths dealt with being those of males under 75 years of age which occurred in Victoria during the ten years ended with 1890:—

Mode of Computing "Adjusted Death Rate."

		Males under	75, 1881 to 1890.
Ages.	Standard Population.	Death Rates experienced. †	Deaths in Standard Population accord- ing to rates in previous column.;

Average, or "Adjusted death rate"	1,000	•••	15:97

^{*} For an account of three of these methods, see Victorian Year-Book 1886-7, paragraphs 589 et seq.

[†] Ascertained by finding the proportion of deaths at each age-period per 1,000 of the actual population at the same age-period.

[‡] Ascertained as follows:—Under 5 years,  $\frac{1,350 \times 44.79}{1,000} = 60.47$ , and so on for the other lines-

[§] The difference between this number and 10,000 (viz., 125) represents the number over 75 years of age.

657. It is thus shown that if the mortality of males under 75 years "Adjusted death rate." of age, which occurred in Victoria during the ten years 1881 to 1890, had been experienced by a male population of 9,875—the ages of such population being in the same proportions as those of the standard population shown on the table—the total deaths of such males would have numbered 157.69, or a proportion to the total number (9,875) of 15.97 per 1,000, which may be termed the "Adjusted death rate" of males during the period of 10 years alluded to. This "Adjusted death rate" is available for forming a correct comparison with a proportion similarly obtained relating to the other sex, or to any other period or country, no matter what may have been the differences of age between the sexes at the two periods, or in the two countries. should be mentioned that the age of 75 is the highest taken into the computation, as, in most countries, the deaths and population are generally tabulated in quinquennial or decennial periods up to, but not beyond that age; and, moreover, the higher ages may safely be left out of account, since, although the death rate at such ages is high, the number living over 75 in a normal population usually amounts to only about 1 per cent.*

658. For the two decades ended with 1880 and 1890 respectively, "ordinary," the "Adjusted death rates" of males and females, obtained in the "Adjusted" manner just described, are, in the following table, placed side by side with the "Ordinary death rates," or those obtained by comparing the deaths with every 1,000 of the population of the same sex irrespective of age:—

"Ordinary" and "Adjusted" Death Rates, 1871-1880 AND 1881-1890.

. F	Period.			Ordinary Death Rate.†	Adjusted Death Rate.‡
M	TALES.				
1871 to 1880				16.45	16.48
1881 to 1890	• • •	• • •		16.55	15.97
Increase				·10	
Decrease	•••		•	• • •	:51
$\mathbf{F}_{\mathbf{E}}$	MALES.				
1871 to 1880	• • •			14:15	14.64
1881 to 1890				13.56	13.85
Decrease	•••			•59	.79

^{*} It has been suggested that another age group—75 and upwards—should be added in order to complete the series, but this has been omitted advisedly, inasmuch as the average age of persons living over 75 would obviously be lower in the younger colonies of Australasia than in the older ones, and this would introduce an element of uncertainty, seeing that the death rate doubles itself every tenth year at such high ages.

[†] Per 1,000 of the actual population.

[†] Per 1,000 of the standard population.

Results of the two methods compared. 659. Comparing the death rates in 1881-90 with those in the previous decade, it is found that according to the "Ordinary" and less reliable method of computation, there was an apparent increase in the mortality of males, amounting to ·10 per 1,000, but a decrease in that of females, amounting to ·59 per 1,000; whereas, according to the "Adjusted" or more correct method, there was a decrease in the case of both sexes, viz., of ·51 per 1,000 in the case of the males, and of ·79 per 1,000 in the case of females.

Death rates
"Ordinary"
and "Adjusted," in
Victoria,
England,
Germany,
and France.

660. The average mortality of both males and females at all ages is much lower in Victoria than in England, Germany, or France, but the difference is not so great when the new method of comparison is used ("Adjusted" death rate) as it is when the old one is used ("Ordinary" death rate). Thus, according to the old method, deaths of males per 100,000 living are, in England, 380, in Germany, 1,190, and in France, 725, more than in Victoria; but, according to the new method, only 265 more in England, 775 more in Germany, and 718 more in France. And, according to the old method, deaths of females per 100,000 living are, in England, 440, in Germany, 1,173, and in France, 963, more than in Victoria; but, according to the new method, only 226 more in England, 749 more in Germany, and 782 more in France. The following are the figures:—

ORDINARY AND ADJUSTED DEATH RATES IN VICTORIA, ENGLAND, GERMANY, AND FRANCE.

Country.			Ordinary	death rate.	Adjusted	death rate.
		Period.	Males.	Females.	Males.	Females.  13.85 16.11 21.34

England		1881.90	20.3	18.0	18.62	16.11
Germany		1871-81	28.45	25.29	23.72	21.34
France		10 years	23.80	23 19	23.15	21.67

Infantile mortality, 1891. 661. The mortality of infants in 1891, in proportion to the number born, was considerably above the average, and was by far the highest recorded since 1866. The total number under 1 year of age who died in 1891 was 4,861, and as the births numbered 38,505, it follows that 1 infant died to every 7.9 births, or 12.6 infants to every 100 births. In the twenty-five years 1866 to 1890, the proportion of infants dying before completing their first year was 12.52 to every 100 births.*

^{*} See table following paragraph 669 post.

662. It has already been stated that more boys are born than girls, Mortality of but the balance of the sexes is to a certain extent maintained by more female male than female infants dying. This is shown in the following table, which contains a statement, for two recent decades and for each of the last five years, of the number of births of boys and girls, and of the deaths of each before completing their first year, together with the proportion of deaths of infants of either sex to the births of the same sex:—

infants.

MORTALITY OF MALE AND FEMALE INFANTS, 1871 TO 1891.*

		, -		Deaths at under 1 Year of Age.

1891		19,598	18,907	2,575	2,286	13.14	12.09	

663. According to a previous paragraph, the births of male Mortality infants in a series of years were in the proportion of about 105 to greater 100 female infants, and the numbers in this table point to a proportion of 120 deaths of the former to 100 of the latter. noticed that in every one of the years deaths of male infants very much exceeded those of female infants; and as the numbers living were about equal (the excess, if any, being slightly in favor of male infants), the greater tendency of boys than of girls to die before completing one year of life may be considered to be invariable.

664. In proportion to every 1,000 born, the number of male Proportion infants dying varied from 118 in 1873 to 151 in 1875 and 1882, and dying to 160 in 1889, and that of female infants dying from 103 in 1876 to 134 in 1875, and 145 in 1889—the mean number dying per 1,000 births during the ten years ended with 1880 being 130 of the former and 113 of the latter; and in the ten years ended with 1890, 135 and 118 respectively.* The high mortality of infants in 1875 was caused by an epidemic of measles. The next year was one in which the

^{*} For detailed particulars relating to each year, see last edition of this work, Vol. I., paragraph 579.

[†] See paragraph 571 ante.

general mortality was much increased by an epidemic of scarlatina, but infants under 1 year appear not to have been at all affected thereby, as their mortality in 1876 was remarkably low. The high infantile mortality in 1882 was exceptional, as in that year no such epidemics were prevalent. It was not sustained in 1883 or 1884, the infantile mortality in those years having been lower than in most of the preceding ones, but concurrently with an increasing birth rate, there has been a gradual rise in the infantile death rate. The high mortality of 1889 was partly due to an epidemic of whooping-cough, and partly to a largely increased mortality from diarrhæa, gastroenteritis, and debility. The mortality of male infants in 1891 was somewhat below, whilst that of female infants was somewhat above the average of the previous ten years.

Deaths of infants at different ages.

665. In classifying the deaths of infants, those are distinguished which occur at under 1 month of age, at from 1 to 3 months, at from 3 to 6 months, and at from 6 to 12 months. The numbers of these during 1891 and the ten years ended with 1890 are shown in the following table, together with the proportion of deaths at each of those periods of age and the number at each such period to every 100 births. It will be noticed that in 1891 the mortality of male infants was below the average for all age-periods, except one to three months; but that of females was above the average for all except three to six months:—

^{*} For corresponding average for 1871-81, see edition of this work for 1889-90, Vol. I, table following paragraph 635.

666. In 1891 and during the period of ten years, the mortality of More deaths male infants in proportion to the number born exceeded that of than female female infants at each of the age-periods. This was more especially all ages. the case in the first month of life, when the excess of the former, during the period of ten years, was nearly a third; in the next two months this excess was reduced to about a fourteenth, in the next three months to about a tenth, and in the next six months to about a fifteenth.

667. In the same period of ten years, nearly a third of the male Periods at and nearly two-sevenths of the female infants who died before they infants die. were a year old did so in the first month after birth; about twoelevenths of both males and females in the next two months; between a fourth and fifth of both males and females in the next three months; between a third and a fourth of the males, and not quite a third of the females, in the next six months. The proportions for 1891 are slightly less for the period between 3 and 6 months in the case of males, and for the periods between 3 and 12 months in the case of females; and correspondingly higher for the other age-periods than the proportions just alluded to.

668. As a practical result of these calculations, it may be mentioned Probable that of every 20,000 newly-born boys and girls in equal numbers, 420 of the former and 324 of the latter may be expected to die before they are a month old; 237 more boys and 221 more girls may be expected to die between 1 month and 3 months of age; 301 more boys and 273 more girls between 3 and 6 months; 390 more boys and 366 more girls between 6 and 12 months. At the end of a year it is probable that 1,348 of the boys and 1,184 of the girls will have died, and 8,652 of the former and 8,816 of the latter will be still living.

669. In all the colonies, except Tasmania, the infantile death rate Infantile in 1890 was below the average, as will be seen by the following table, which gives the number of births, the number of deaths of infants under one year, and the proportion of the latter to the former, in each of the colonies of the group, for each of the five years ended with 1890, also for one quinquennial and two successive decennial periods (except in regard to Western Australia, for which the information is given at the foot of the table for the last five of those years). All the calculations were made in the office of the Government Statist, Melbourne:-

Mean of 25 Years.	9,104	1,237	13.59	3,692	385	10:43	15,417	1,440	9:34	

Note.—In Western Australia the proportions for the last 5 years were as follow:—1886, 15:48; 1887, 15:68; 1888, 12:38; 1889, 8:79; 1890, 8:97; or an average of 12:26 for the five years.

Apparently high infantile death rate in South Australia explained.

670. For many years the returns of South Australia showed a very high infantile death rate, much higher than that in any of the other Australasian colonies. It has since, however, been stated that the apparently high rate referred to had no existence in reality, but was due to the ages of young children and infants having been incorrectly classified through a misunderstanding on the part of the registering officers. Latterly this has been rectified, with the result that for several years past the infantile death rate of South Australia has compared favourably with that of the other colonies.†

^{*} For information relating to individual years prior to 1886, see last issue of this work, Vol. I., table following paragraph 586.

[†] See issue of this work for 1889-90, Vol. I., paragraph 640.

671. In the following lists the colonies are placed in order accord- order of ing to their respective rates of infantile mortality, the colony with the respect to highest rate being placed first, and the rest in succession. The rate in mortality. 1890, as in the previous year, was highest in Victoria, although that colony was third on the list over a series of years. The reduced rate in South Australia is indicated by the low place it occupies in the list for 1890 as compared with that it occupied in the list extending over a series of years:—

### ORDER OF COLONIES IN REFERENCE TO INFANTILE MORTALITY

#### Order in 1890.

- 1. Victoria.
- 2. Tasmania.
- 3. New South Wales.
- 4. Queensland.
- 5. South Australia.
- 6. Western Australia.
- 7. New Zealand.

Order over a Series of Years.

- 1. South Australia.
- 2. Queensland.
- 3. Victoria.
- 4. Western Australia.*
- 5. New South Wales.
- 6. Tasmania.
- 7. New Zealand.

672. Of all the countries respecting which the information is pro- Infantile curable, infantile mortality is highest in the German States, Austria in various and Italy. In France it is just below the average of the whole of the countries, and in England and Belgium it is next below that in France; then follow Denmark and Sweden; Victoria, Queensland, and Western Australia stand just below Sweden; South Australia, New South Wales, and Tasmania below these and Scotland; whilst New Zealand, with Ireland, stands below all the other countries:—

Note.—The information respecting all the countries except the Australasian colonies and Ireland is based upon the average of the 19 years ended with 1883. That respecting the Australasian colonies, except Western Australia, which is for 5 years, is based on the average of the 10 years ended with 1890, and that respecting Ireland is for the year 1890. All the figures have been derived from official documents.

^{*} According to an average of 5 years only.

Infantile mortality in Melbourne and country.

673. The infantile mortality of large towns is naturally always above that in country districts. Thus the deaths at under 1 year of age in Melbourne and suburbs (Greater Melbourne) during the nineteen years ended with 1891 averaged 17 per 100 births, whilst in the extra-metropolitan districts of Victoria the mortality of infants at the same period of life averaged less than 10 per 100 births. The following table shows the death rate of infants in the metropolis and in the other districts of the colony during the period 1873 to 1880 and each of the eleven years named:—

Infantile Mortality in and outside of Greater Melbourne, 1873 to 1891.

Infantile mortality in English and Australasian towns.

674. In Brisbane and Adelaide the rate of infantile mortality is higher, and in Hobart and Wellington lower, than in Melbourne and Sydney—the rate in these two being nearly identical. In the four last-named cities, the rate of infantile mortality compares favourably with that in the majority of the following towns, which are arranged in order according to the extent to which infantile mortality prevails in each:—

675. In, or in connexion with, the Women's Hospital, Melbourne, Deaths of 786 children were born alive during the year ended with 30th June, women's 1891, and of these 25, or about 3 per cent., died whilst under the care of the institution. In the previous year,  $4\frac{1}{2}$  per cent.; in 1888-9, 4 per cent.; in 1887-8, 3 per cent.; in 1886-7, 4 per cent.; in 1885-6,  $4\frac{2}{3}$  per cent.; in 1884-5 and 1883-4, 9 per cent.; in the year 1882-3, 7 per cent.; in 1881-2 (18 months),  $11\frac{1}{2}$  per cent.; and in the year 1880,  $5\frac{1}{2}$  per cent. of the infants born in the Women's Hospital, or outside under the supervision of its medical officers and committee, died before the mother had been discharged. It is satisfactory to find that the proportions in the last and five previous years were the lowest recorded in the institution; at the same time it may be pointed out that, in consequence of the bad class of cases which come to maternity hospitals for treatment, the infants who die in such institutions, in proportion to the numbers born, are, all over the world, in excess of a similar proportion outside.

676. In the year 1891, deaths of male children under 5 years of Deaths of age numbered 3,443, and deaths of female children under that age under 5 numbered 3,075—the former being in the proportion of over 32 per cent., and the latter of nearly 39 per cent., to the total number of deaths at all ages. These proportions are below the average; in the case of males the proportion was, with one exception, the lowest in the last 21 years, and in the case of females, the lowest with two Thus the mortality of young children of both sexes in exceptions. 1891, as also in 1890, was in striking contrast to that in 1889, when it was higher than it had been for several years previously. Comparing the average of the last decade with that of the previous one, a marked falling off took place in the mortality of children relatively to that of persons of all ages, which is accounted for by the fact that the proportion of children to the total population has been diminishing from

Hospital.

year to year, and is now very much lower than it was in the earlier period referred to. The following table shows the annual number of such deaths at each year of age, and their proportion to the deaths at all ages, in each of the last six years and during the two decennial periods ended with 1880 and 1890 respectively:—

More boys die than girls.

677. During the ten years ended with 1880, deaths of male children under 5 numbered 27,643, and deaths of female children under 5 numbered 24,071, and thus the former exceeded the latter by 3,572, or by 15 per cent. The deaths of male children in all the years bore a much smaller proportion to the total deaths of males than the deaths of female children did to the total deaths of females, a circumstance mainly due to the small proportion of adults in the female as compared with that in the male population. In the ten years ended with 1890, the mortality of boys under 5 amounted to 34 per cent., and that of girls under 5 amounted to nearly 40 per cent., of the whole mortality of their respective sexes. In none of the years to which the table relates did the former exceed 45 per cent., or the latter exceed 53 per cent., of that mortality. The epidemic periods, 1875 and 1889, are easily recognised by the increased mortality which occurred thereat.

678. The average number of male and female children at each Number of year of age under 5 living, during the period of ten years ended with 1890, are compared in the next table with the average number of deaths of children of the same sexes at those ages which occurred annually during that period:—

NUMBER AND DEATHS OF CHILDREN UNDER 5 YEARS OF AGE, 1881 то 1890.

		M	ales.			Fem	ales.	
Age last Birthday	Mean Number Living, 1881 and 1891.	Mean Annual Deaths, 1881 to 1890.	Per- centage of Deaths at each age.	Deaths per 1,000 Children Living.	Mean Number Living, 1881 and 1891.	Mean Annual Deaths, 1881 to 1890.	Per- centage of Deaths at each age.	Deaths per 1,000 Children Living.
0	14,229	2,158	72.20	151:66*	13,891	1,805	70.29	129.94*

2	13,453	161	5.39	11.97	12,938	151	5.88	11.67
3	13,005	114	3.81	8.77	12,818	105	4.09	8.19
4	12,727	92	3.08	7.23	12,506	84	3.27	6.72
Total	66,537	2,989	100.00	44.92	64,931	2,568	100.00	39.55

679. During the period to which the table refers, the mean number Proportion of children of both sexes under 5 living was 131,468, and the mean number of deaths of such children was 5,557, whence it results that 42 in every 1,000 children under 5, or about 1 in 24, died annually, as compared with 44 per 1,000 in the previous 11 years. In every 1,000 boys the proportion who died annually was 45, or 1 in 22, whilst in every 1,000 girls it was 40, or 1 in 25, whereas in the previous eleven years the proportion per 1,000 was 47 for males and 41 for females.

of children annually.

680. Of every 1,000 boys under 1 year of age, 152, and of every Proportion 1,000 girls under 1 year of age, 130, died annually in the decade under notice; the corresponding proportions for the previous ten years being 146 and 125 respectively. These are higher proportions than those quoted in the table showing the comparison of deaths of children under 1 with the births, the proportions in which were 135 deaths of male infants and 118 deaths of female infants to every 1,000 births of infants of those sexes respectively during the recent decade, and 130 and 113 respectively during the previous one.

of infants annually.

† See table following paragraph 662 ante.

^{*} These results, being based upon infants living at any one time instead of annual births, are naturally in excess of those given for the corresponding period in the last two columns of table following paragraph 662 ante.

More boys died than girls.

681. In proportion to their respective numbers in the population, more boys than girls died at every year of age, the difference per 1,000 living being as much as 22 at under 1,* but only about 2 at from 1 to 2, and less than 1 at subsequent ages.

Boys and girls dying under 1.

682. According to the figures, deaths of boys under 1 year of age furnish a larger proportion to the total deaths of boys under 5 than deaths of girls under 1 do to the total deaths of girls under 5, but the reverse is the case at each of the years of age after the first.

Proportion of deaths of each age.

683. Of the whole number of children who died before they children at attained the age of 5, nearly three-fourths, viz., 72 per cent. of the boys and 70 per cent. of the girls, were under 1 year of age; less than a sixth of the boys and about a sixth of the girls were between 1 and 2; about 1 in 18 of the boys and about 1 in 17 of the girls were between 2 and 3; 1 in 26 of the boys and 1 in 24 of the girls were between 3 and 4; 1 in 32 of the boys and 1 in 30 of the girls were between 4 and 5.

Probable under 5.

684. It results from actuarial calculations, based upon the figures mortality of children in this and a previous table,† that of every 20,000 boys and girls in equal numbers born in Victoria, 1,348 boys and 1,184 girls may be expected to die before they complete a year of life, 301 more boys and 287 more girls before they complete 2 years, 99 more boys and 99 more girls before they complete 3 years, 72 more boys and 69 more girls before they complete 4 years, and 59 more boys and 56 more girls before they complete 5 years. At the end of that period it is probable that 1,879 of the boys and 1,695 of the girls will have died; and 8,121 of the boys and 8,305 of the girls will be still living. This result is more favourable than that deduced from the mortality of the decade 1871-80, which showed the number of survivors at the end of the first five years of life to be 8,015 for boys and 8,195 for girls.

Deaths of octogenarians.

685. The persons who died at the age of 80 or upwards numbered 831 in 1891, as against 647 in 1890 and 613 in 1889. Those in 1891 consisted of 492 males and 339 females. Fifty-seven of the males and 62 of the females had passed the age of 90, and 3 (all females) had passed the age of 100. The following are the exact registered ages of such persons in the last twenty-one years:-

^{*} See also paragraph 678 ante.

[†] See table following paragraph 665, from which probable deaths at under 1 year of age have been deduced; also paragraph 668 ante. Probability of death at other ages under 5 has been calculated from the numbers in the last table.

686. In the 9 years ended with 1890, 2,572 males and 1,918 females Deaths of died in Victoria at the age of 80 or upwards. The deaths of males and females at all ages during the same period numbered 79,891 and 59,266 respectively, therefore 1 male in every 31 males who died, and 1 female in every 31 females who died, lived to be upwards of 80 years In the same period, 285 of the males, or 1 in 280, and 261 of of age. the females, or 1 in 225, lived to be 90 years of age or upwards; and 33 of the males, or 1 in 2,415, and 23 of the females, or 1 in 2,577, lived to be upwards of 100 years of age. Owing to the rapidly increasing proportion of old people in the population, these proportions are much higher than those prevailing in the preceding period of 9 years ended with 1881, when only 1 male in every 56 males and 1 female in every

octogena-

rians, 1882 to 1891.

^{*} These figures are those relating to the years 1871 and 1872, in which the exact ages of octogenarians were not noted.

58 females who died was upwards of 80 years of age; only one male in 496, and 1 female in 413, was upwards of 90 years; and only 1 male in 5,912, and only 1 female in 3,776, was upwards of 100 years.

Average age at death.

687. The average age at death in 1891 was 33·35 years, or a fraction over 33 years and 4 months. For males the average was 35·86 years, or about 35 years and 10 months, and for females was 29·98 years, or nearly 30 years; the females being thus on the average about 6 years younger than the males. Until 1882, the average age at which both males and females died in Victoria had a tendency to advance from year to year, but since then the average has remained tolerably steady—the year 1889, however, being an exception, owing to the high mortality of children in that year having lowered the average—as will be seen by the following figures:—

### AVERAGE AGE AT DEATH IN VICTORIA.

Expectation of life in Victoria and England.

688. It should be explained that the average age of death, as given above, would not give a correct idea of the average duration of life, even if the ages of the population were in a normal condition. In an increasing population the former must be always considerably below the latter, in consequence of the undue proportion of children, which tends to lower the average age. A knowledge of the average duration of life can only be accurately obtained from a life table based upon actuarial calculations of a complex character. In England and Wales, according to the most recent life table, the average duration of lifetechnically called "expectation of life," or "mean after lifetime"—is 41.92 years for males, and 45.25 years for females. In Victoria, according to a life table constructed some time since by Mr. A. F Burridge, F.I.A., of London, based on the mortality experienced in the 10 years 1870-81, the average duration of life is 46.37 for males, but a table for females was not given.* It would thus appear that a male Victorian may expect, on the average, to enjoy  $4\frac{1}{2}$  years more of life than an Englishman.

New classification adopted in Victoria. 689. The system of classifying the causes of death in Victoria was changed in 1886 in accordance with a system which had been adopted

^{*} See Journal of the Institute of Actuaries, Vol. XXIV., page 351. Prior to this (Vol. XXIII., page 325) Mr. Burridge published a life table for both sexes, based, however, upon the results of only one year (1879). According to this table the "expectation of life" in Victoria would be—males 49:20, females 52:33.

in England a few years previously. This new mode of classification was based upon one devised by a committee composed of members of the Royal College of Physicians, London, and was published by them, first in 1869, and afterwards, in a revised form, in 1885. The system of classification, now adopted, has superseded that of the late Dr. Farr, which, until the new system was introduced, had been the mode used for classifying the causes of death, both in England and Wales and in the Australasian colonies. A full account of the difference between the two systems was given in the Victorian Year-Book, 1886-7.*

690. A Nosological Index was compiled by the present writer Nosological more than a quarter of a century since, under the sanction of the then Registrar-General, Mr. W. H. Archer, F.I.A., to be used in connexion with Dr. Farr's classification, in order to facilitate the bringing of all the circumstances resulting in death under classified heads, also for the guidance of deputy registrars in receiving, and of medical men in supplying, information respecting the causes of death, and of officers of charitable and other public institutions in preparing statistical tables of the deaths and sickness occurring therein. The adoption of a new system of classification has made it necessary that the Nosological Index should be completely altered to suit the change. has been done according to the best knowledge possessed by the Department of the Government Statist, Melbourne, the place to be assigned to each disease or cause of death having been carefully considered by experienced officers and compared with the revised nomenclature proposed by the Royal College of Physicians. At the same time the opportunity has been taken greatly to increase the number of entries in the Index.†

691. From the date of its publication until the adoption of the victorian new classification in 1886 the former Index had been in general use in use in the registration departments of all the Australasian colonies, some Australasia. of which received such a supply of copies as they required from the Victorian Government, and others reprinted the work. Most of the colonies have now adopted the new system. To all the colonies adopting this system the revised Index will be found as indispensable as the former one proved itself to be during a period of twenty-five years in connexion with the system which has been abandoned.

throughout

692. The following table shows the causes of death in classified causes of arrangement; the total number and the number of Chinese and classified. Aborigines who died from each cause during 1891, also the total number who died from each cause during the ten-year periods ended with 1890 and with 1880:—

^{*} Paragraph 635 et seq. † A copy of the new Nosological Index was published in the Victorian Year-Book, 1886-7, page 853 et seq. Copies can be obtained at a small cost from the Government Printer, Melbourne.

CAUSES OF DEATH IN CLASSIFIED ARRANGEMENT. (10 Years: 1871 to 1880, and 1881 to 1890; and Year 1891.)

693. The next table shows the same causes of death, arranged in causes of the order of their fatality, during 1891, with the numbers who died from each cause in that year, and during the decennial periods ended with 1890 and 1880; also the order of fatality of the different causes during those periods:—

order of fatality.

[†] Included with cancer (IV.) prior to 1886. * For five years only.

† Included with cancer (IV.) prior to 1886.

† At least five of the deaths in the ten years 1881-90 were cases of insect-bite, but in most of those years such cases were not distinguished; in 1891 all the cases were of snake-bite.

[§] Including one case of justifiable homicide.

| Including anæmia (IV.) prior to 1886.

[¶] Including atelectasis (V.) prior to 1886.

## CAUSES OF DEATH IN ORDER OF FATALITY. (10 Years: 1871-80, and 1881-90; and Year 1891.)

Note.—See notes to table following paragraph 692 ante.

^{*} Including deaths from diphtheritic croup.

695. By means of the results shown in this table, it is found that, Diseases over a series of years, the mortality from the following causes is in Victoria greater in Victoria than in England and Wales:—Diphtheria,* typhoid England. fever, diarrheal diseases, malarial diseases, dietic diseases (including want of breast-milk and alcoholism), parasitic diseases (including thrush, hydatids, etc.); diseases of the stomach, bowels and liver; violent deaths of all kinds; and the consequences of childbirth. From every other specified cause shown, also from all causes combined, the death rate is, on the average, higher in England and Wales than in Victoria.

696. It should be explained that under the altered nosological New nosclassification, which has now been in force for six years, the increased number of distinct diseases specified, and the numerous changes from being made in the grouping of diseases, have rendered it difficult in some comparinstances to compare correctly the number of deaths resulting from many diseases, now stated separately, with the deaths which resulted from the same diseases before the change took place, when they were grouped with other complaints in such a way as to be now not distinguishable. Such discrepancies have, as far as possible, been pointed out in the footnotes to a previous table, by means of which it will generally be found possible to institute a fair comparison.

ology prevents returns strictly able.

697. Per 100,000 of the population, 255 deaths in 1891 were set specific down to specific febrile or zymotic diseases. The proportion was zymotic above the average of the decade 1881-90, but nearly one-third below the average of the decade 1871-80, during which period, in consequence of the prevalence of epidemics, the rate of mortality from this class of complaints was considerably higher than in England during the five years 1886 to 1890. Of the 255 deaths referred to, 167 were set down to miasmatic, 71 to diarrheal, 12 to septic, 5 to venereal diseases, and only a fraction to malarial and zoogenous diseases. Owing to the prevalence of epidemic influenza during the last four months of the year (but chiefly in October), the mortality from miasmatic diseases (167 per 100,000 persons living) was considerably above the average of the previous ten years (109), the death rate from that disease being 90 per 100,000, or more than half the number in On the other hand typhoid fever, usually the the whole sub-class. most fatal miasmatic disease in Victoria, caused only 31 deaths per 100,000 of the population in 1891, as compared with as many as 54 in

febrile or diseases.

^{*} There is some difficulty in making comparisons in the case of diphtheria, as diphtheritic croup, which is generally classed with croup, may sometimes be classed with diphtheria. See footnote on page 419.

1890, and about 53 according to the average of the last twenty years, which is about three times as high a rate as that which prevails in England. Diphtheria in 1891 was not nearly so fatal as in the two preceding years; the mortality therefrom being 28 per 100,000, as compared with 66 in 1890 and 48 in 1889; the average during the 10 years 1881-90 was only 26, and that of the previous decade 38. The mortality from diarrheal diseases in 1891 (71 per 100,000) was about the same as in 1890, lower by a third than during the decade 1881-90, and scarcely half as high as in the decade 1871-80. The mortality from most of the other zymotic diseases, except whooping cough and zoogenous and venereal diseases, was considerably below the average of the previous ten years.

Zymotic diseases, etc., in Australasian colonies.

698. The following is a statement of the number of deaths from zymotic diseases under the old classification, which now corresponds as nearly as possible with the zymotic, parasitic, and dietic classes of diseases together, and of the proportion of such deaths to the total mortality and to the population over a series of years in all the Australasian colonies. The colonies are placed in order according to the death rate from diseases of this class prevailing in each:—

ORDER OF COLONIES IN REFERENCE TO MORTALITY FROM ZYMOTIC,
PARASITIC, AND DIETIC DISEASES, 1878-87.

	Deaths from Zymotic, Parasitic, and Dietic Diseases, 1878-87.					
Colony.	Total Number.	Percentage of Total Deaths.	Annual Proportion per 10,000 Persons Living.			
1. Queensland	13,190	28.11	49.5			
2. Western Australia	1,099	20.34	34.2			
3. South Australia	8,425	20.53	29.3			
4. New South Wales	22,909	18.13	27.7			
5. Victoria	23,776	17.71	26.2			
6. Tasmania	2,793	14.59	22.7			
7. New Zealand	11,544	20.25	22:3			

Results
compared
in different
colonies.

699. It will be observed that in Victoria, during the 10 years 1878 to 1887, the mortality from zymotic, parasitic, and dietic diseases was less in proportion to the population as well as to the mortality from all causes than it was in any of the other Australasian colonies except Tasmania and New Zealand. Queensland was much above the other colonies in these respects, and was the only one of the colonies in which the death-rate from this class of complaints was higher than that in England. In New South Wales, on the other hand, the proportion was only slightly higher than in Victoria.

700. Small-pox has never prevailed as an epidemic amongst the Small-pox in people of Victoria. On several occasions persons sickening from or countries. affected by that complaint have arrived in vessels, and before the nature of the malady was discovered it has been caught by others; but in every case the patients have been promptly isolated by order of the Government, and the disease has soon disappeared. No death from small-pox has occurred in the last three years, and since the registration system was first introduced in 1853 only 26 deaths from it have been recorded, five of which occurred in 1884; some cases of the complaint, however, occurred in June of the present year, respecting which the following particulars have been supplied by the Department of Public Health:---

On the 15th June the R.M.S.S. Oroya arrived at Melbourne, and on the 18th one of her passengers who was lodging at a coffee palace was reported to be ill of small-pox; other cases were reported on the 24th and 26th June, and a case of a passenger who had had small-pox during the voyage, and who, though convalescent, was still in an infectious state, was also discovered. These four cases were promptly removed to the sanatorium; the houses, furniture, bedding, and clothing in the places where they were lodging were disinfected, and all persons who had come in contact with them, as far as known, were re-vaccinated; the same operation was also performed on all the remaining passengers by the Oroya who could be traced, and no extension of the disease took place in Victoria. The four passengers recovered. It is believed that the passenger who was found to be convalescent here had smallpox between the Red Sea and Colombo; the case was not diagnosed as small-pox, and the three passengers who were attacked on the arrival of the Oroya caught the disease from this case. Two of the Oroya's passengers who landed in Sydney had small-pox, as also a steward and quarter-deck man. In Queensland one passenger had the disease; in Sydney there was one death, and in Queensland the passenger died. In Sydney the disease spread to three residents, in Queensland to one. Beyond this there was no further extension of the disease in Australia.

701. Material for giving some statistics of deaths from small-pox in other countries is at hand in the valuable paper contributed by Dr. E. Raseri to the International Statistical Institute at its session held at Rome in the month of April, 1886. The following are the figures referred to, which relate generally to the mean of the four years 1881 to 1884:—

Annual Death Rate from Small-pox in Various Countries.*

Deaths from Small-pox Annually per 10,000 persons living.	Deaths from Small-pox Annually per 10,000 persons living.
Spain (principal towns) 13.07	Holland
Spain 8.46	Sweden :41
Austria (principal towns) 8.43	Switzerland · 33
Austria 7.05	Prussia 29
Belgium 4.09	Germany (principal towns) ·23
Belgium (principal towns) 3.15	Ireland 20
Russia 2.96	Massachusetts18
Italy 1.63	Denmark (towns) '08
Switzerland (principal towns) '80	Scotland (eight towns) '05
Sweden (principal towns) '69	Scotland
England and Wales '67	

^{*} For an account of the mortality from small-pox amongst the Australian aborigines, see Victorian Year-Book, 1888-9, Vol. II., paragraph 228.

Vaccinations.

702. Although cases of small-pox have rarely occurred in Victoria, parents are required by law to cause their children to be vaccinated.* In 1891 the number of cases of successful vaccination performed in Victoria was 25,538; and, as the number of births was 38,505, it appears that 66 per cent. of the children born were vaccinated. This proportion is lower than in any of the previous 15 years except 1881,† when a scare took place. Part of the remainder are accounted for by death-3,409, or nearly 9 per cent., of those born having died before they were 6 months old. The average proportions of vaccinations to infants born is  $75\frac{1}{2}$  per cent., as is seen by reference to the following figures, which indicate the proportions during each of the 16 years ended with 1891:—

Proportion of Vaccinations to Births, 1876 to 1891.

			Vaccinations Per 100 Births.				Vaccinations. Per 100 Births.

Vaccinations in various countries.

703. Dr. Raseri‡ gives the following as the proportions of successful vaccinations to births in different countries, generally during the years 1880 to 1884. To these have been added the proportions in such of the Australasian colonies as the information is available for:—

Proportion of Vaccinations to Births in Various Countries.

	Vaccinations Per 100 Births.		Vaccinations Per 100 Births.
Ireland	89	Italy	73
Scotland	88	Germany	<b>7</b> 1
Norway	87	South Australia (1878 to 1887)	69
England and Wales	86	New Zealand (1886 to 1887)	68
Hungary	86	France '	<b>64</b>
$\mathbf{Holland}  \dots \qquad \dots$	$\dots$ 82	Russia in Europe	<b>56</b>
${f Sweden}$	80	Tasmania (1878 to 1887)	<b>55</b>
Austria	78	New South Wales (1878 to 1887)	<b>25</b>
Victoria (1878 to 1887)	77		

Vaccinations in and elsewhere.

704. It appears by the figures that the proportion of infants Australasia vaccinated is larger in Ireland than in any other country, and next so

^{*} An interesting report on the efficacy of vaccination was published in the last edition of this work, Vol. I., paragraph 615.

⁺ In this year, owing to an alarm occasioned by an outbreak of small-pox, first in Sydney and subsequently on board vessels arriving at Melbourne, the vaccinations exceeded the births by 100. ‡ Bulletin, etc., page 189.

in Scotland; and that whilst in Victoria more than three-fourths of the children born are vaccinated, in South Australia and New Zealand little more than two-thirds, in Tasmania little more than half, and in New South Wales only one-fourth, of the infants are vaccinated.

705. The number of public vaccinators in Victoria is 198, and the Cost of amount paid in 1891 for vaccinations, including fees to Deputy-Registrars and travelling allowances to vaccinators, was £5,251.

706. The seven zymotic diseases which chiefly affect children are zymotic measles, scarlet fever, diphtheria, croup, whooping-cough, dysentery, and diarrhea. The following table shows the number of deaths from such diseases which occurred during the years 1890 and 1891; the annual means of the seven years 1864-70, and of the decades 1871-80 and 1881-90 being also given:—

DEATHS FROM ZYMOTIC DISEASES CHIEFLY AFFECTING CHILDREN 1864 то 1891.*

Year or Period.		Annual Number of Deaths from—									
		Measles.	Scarlet Fever.	Diph- theria.	Croup.	Whooping Cough.	Dysen- tery.	Diarrhœa.	Total.		
1864-70	•••	161	326	410	148	185	338	801	2,369		
1871-80		208	410	304	190	197	285	767	2,361		
1881-90		54	43	257	200	139	124	830	1,647		
1890	•••	1 1	68	734	297	98	105	612	1,915		
1891		4	25	326	170	168	83	655	1,431		

Note.—Croup is included in this table, although not now classed as a zymotic disease, since a large number of deaths are set down to diphtheria and croup conjointly.

707. As compared with the previous year, a marked decrease took Children's place in 1891 in the mortality from scarlet fever, diphtheria and croup, and dysentery, but an increase from the other diseases named in the table, and especially from whooping cough. Taken as a whole, these diseases in 1891 caused 484 fewer deaths than in 1890, and a smaller number than in any previous year since 1881.*

diseases,

708. Measles in a fatal form appears to be almost non-existent in Measles. Victoria at the present time. An epidemic of that complaint occurred in 1884, and caused in that and the following year 302 deaths, or 12 less than resulted from the preceding epidemic of the same complaint in 1880 and 1881. Neither of these outbreaks of measles was so serious in its effects as the two previous ones of 1874-5 and 1866-7, when the resulting deaths numbered 1,797 and 1,057 respectively. Per 10,000 of the population, the proportion of deaths from measles

^{*} For numbers in each year, see last edition of this work, Vol. II., paragraph 616.

was 17 in 1889 and 86 in the ten years ended with 1887, the latter proportion being lower than in any of the following European countries, but very slightly higher than that in the other Australasian colonies, except South Australia, as is shown by the following figures:—

# Annual Death Rate from Measles in Various Countries, 1881 to 1884.*

Note.—A useful circular issued under the direction of the Central Board of Health, describing the symptoms of measles, the precautions necessary to be taken to prevent its spread, and mode of treatment in the absence of medical aid, was published in the *Victorian Year-Book*, 1887-8, Vol. I., paragraph 661.

Scarlet fever.

709. On the occasion of the earlier visitations of measles in 1866-7 and 1874-5, the epidemic was accompanied or followed by one of scarlet fever, which proved to be even more fatal than the former complaint; but no such calamity has attended the last two outbreaks of measles, during the whole period of which, especially the last outbreak, the mortality from scarlet fever was exceedingly low. fatality attending this complaint has very much diminished of late years, the deaths from it—notwithstanding the increased population having numbered only 430 in the ten years 1881-90, or an average of 43 per annum; as against 5,101, or an average of 510 per annum, in the preceding ten years; and 2,284, or an average of 326 per annum, in the seven years ended with 1870. In 1891, scarlet fever caused 26 deaths, or 23 per 10,000 of the population, as against 43 in the ten years ended with 1890, and 5.15 in the ten years ended with 1880. Whilst the death rate from this complaint in the ten years 1881-90 was lower than the average prevailing in any of the following

^{*} These proportions, except those for the Australasian colonies, have been taken and re-arranged from Dr. Raseri's paper already alluded to, page 193.

and croup.

countries except Queensland, that in the decade preceding those years was higher than in most of the countries named:-

Note.—A useful circular on scarlet fever, issued by the Central Board of Health, was published in the Victorian Year-Book, 1888-9, Vol. II., paragraph 238.

710. In consequence of the similarity of the complaints, and the Diphtheria number of deaths set down to a combination of both, it is misleading to consider the deaths caused by diphtheria apart from those caused by croup. Taking the two affections together, they were to every 10,000 of the population in the proportion of only 4.32 in 1891, as against 9.11 in 1890, 7.32 in 1889, 4.54 in the ten years ended with 1890, and 6.19 in the ten years ended with 1880. The proportion, over a series of recent years, is lower than that for any of the foreign countries of which information is at hand, except Ireland, England, and Holland, as will be seen by the following figures:—

ANNUAL DEATH RATE FROM DIPHTHERIA AND CROUP IN VARIOUS Countries, 1881 to 1884.*

Note.—A circular, giving the symptoms of diphtheria and directions for its management in the absence of medical assistance, was issued by the Central Board of Health during the early part of 1888, and was republished in the *Victorian Year-Book*, 1887-8, Volume I., paragraph 664.

Whooping cough.

711. Deaths from whooping-cough in 1891 were in the proportion of 1.46, in 1890 of .88, in 1889 of 2.12, in the ten years ended with 1890 of 1.34, and in the ten years ended with 1880 of 2.48 per 10,000 persons living. All these proportions, as well as those in the other Australasian colonies, are lower than those generally prevailing in most of the foreign countries named in the following table:—

# Annual Death Rate from Whooping-Cough in Various Countries, 1881 to 1884.*

Note.—A circular on whooping-cough and its treatment, issued by the Central Board of Health, was republished in the *Victorian Year-Book*, 1887-8, Volume I., paragraph 666.

Typhoid fever.

712. Typhoid fever† caused 356 deaths in 1891, or only three-fifths of the number which took place in the previous year, and not two-fifths of the number in 1889, when it was exceptionally prevalent. The rate of mortality from this complaint in 1891 was only 3·10 per

^{*} Except those for the Australasian colonies, the figures have been taken and re-arranged from Dr. Raseri's paper, page 193.

[†] A useful circular issued under the direction of the Central Board of Health, describing the symptoms of typhoid fever, the precautions necessary to be taken to prevent its spread, and mode of treatment in the absence of medical aid, was published in the *Victorian Year-Book*, 1888-9, Vol. II., paragraph 242.

10,000 persons living, which is the lowest recorded during a period of 26 years; although two years previously (in 1889) it was as high as 8.37. During the last 26 years the death rate from typhoid fever has fluctuated considerably, but, nevertheless, there were four pretty wellmarked maximum periods, viz., 1866-7, 1877-8, 1883, and 1889, when the rates rose to over  $6\frac{1}{2}$  per 10,000 persons living. The minimum periods are not so well marked; but the principal ones appear to be 1871-3, 1880-81, and 1891, when the average rate was below 4 per 10,000; and 1885, when it was a little above that proportion. Typhoid fever causes, on the average, nearly  $3\frac{3}{4}$  per cent. of the total deaths from all causes, and as many as 13 per cent. of those at between 10 and 25 years of age. The following table shows the number of deaths from typhoid fever, and their proportion to the population, during each of the past 26 years:—

DEATHS FROM TYPHOID FEVER, 1866 TO 1891.*

			om Typhoid ever.	•		Deaths from Typhoid Fever.		
Year.		Total Number.	Number per 10,000 Per- sons Living.	Year.		Total Number.	Number per 10,000 Per- sons Living.

713. According to the average of the ten years ended with 1890, Typhoid the death rate from typhoid fever ranged from 2.5 per 10,000 persons living in New Zealand to 5.7 in Victoria and 9.6 in Queensland. following table shows the mortality from that complaint in the Australasian colonies during the periods 1873-80 and 1881-90, also for each of the five years ended with 1890, except in the case of Western Australia, for which the information is given for the last six years only:—

fever in Australasian colonies

^{*} In the new classification, simple continued fever is entered as a separate complaint from typhoid fever, but as no such distinction was observed in former years, cases occurring in 1886 and subsequent years, which might possibly have been placed under the former head, have, for the sake of comparison, been still placed under the latter.

DEATHS FROM TYPHOID FEVER* IN AUSTRALASIAN COLONIES, 1873 то 1890.

			Deaths	from Typho	id Fever Ann	ually.

1890		99	3.13	49	3.41	149	2.40

Note.—In Western Australia the deaths from typhoid fever numbered 29 in 1885, 13 in 1886, 13 in 1887, 7 in 1888, 5 in 1889, and 2 in 1890, the respective proportions per 10,000 persons living being 8.51, 3.49, 3.12, 1.65, 1.16, and .42, resulting in an average during the 6 years of 3.06.

Deaths from typhoid colonies, 1890, and previous years compared.

714. In 1890, the death rate from typhoid fever was slightly fever in the above the average in Victoria, but below it in all the other colonies, especially New South Wales, Queensland, Tasmania, South Australia, and Western Australia; in the previous year the rate was above the average in all the colonies except Western Australia and New Zealand. In New South Wales in 1890 the rate per 10,000 persons living was only 2.82, and in Queensland only 3.40, as compared with an average extending over the ten years ended with 1890 of 4.77 in the former, and 9.61 in the latter.

**T**yphoid fever in England and Wales

715. In England and Wales the mortality from typhoid or enteric fever‡ has been considerably reduced of late years, and it is now lower than in any of the Australasian colonies, although only slightly lower than in New Zealand. During the ten years ended with 1880 the mean death rate therefrom was 4.30, but in the ten years ended with 1890 only 2.23 per 10,000 persons living, the latter being far lower

^{*} Including simple continued and ill-defined fever. It is possible that in some of the colonies a few cases of remittent fever may be returned under one or other of these heads. For mortality in each year since 1872, see last edition of this work, Vol. I., paragraph 623. † Years 1875 to 1880.

t The English figures quoted are those of enteric, or typhoid, and simple continued fever, which probably correspond with the fevers tabulated as typhoid in Victoria.

than even the minimum rate (3.10) recorded in Victoria during the last twenty-eight years.*

716. In the returns of most European countries deaths from Typhoid and typhus in typhoid fever are not distinguished from those caused by typhus, the latter being a complaint which it is said does not exist in the Australasian colonies. In England and Wales these fevers have been returned separately since 1869, and it is probable the following figures, so far as they relate to that country, apply to typhoid only, whilst those for most of the other countries, it is believed, refer to the two descriptions of fever combined:—

ANNUAL DEATH RATE FROM TYPHOID AND TYPHUS IN VARIOUS Countries, 1881 to 1884.†

717. Influenza, in an epidemic form, prevailed in Victoria, as well Influenza. as in most other countries, during 1890 and 1891, and, whilst it proved fatal to persons of all ages, it pressed most hardly upon the old and the very young. The following is a statement of the deaths of males and females at various ages set down to this complaint in the two years:—

DEATHS AT EACH AGE FROM INFLUENZA IN VICTORIA, 1890 AND 1891.

Deaths in each month from influenza.

718. In proportion to the number of inhabitants, influenza was not more fatal amongst the crowded population of Melbourne and suburbs than it was in the sparsely populated country districts. Neither does it seem to have been influenced by the seasons, as, according to the following figures, which relate to Greater Melbourne, it was found in 1890 to have caused most deaths in the months of April and May, and in 1891 in those of September, October, and November:—

Complaints supervening on influenza. 719. It may be remarked that, besides the deaths set down to influenza, many deaths were registered as from bronchitis, pneumonia, and other diseases of the respiratory system which originated in attacks of influenza, and were complications of that complaint.

Venereal diseases.

720. Deaths from venereal diseases averaged annually 38 in the ten years ended with 1880, and 43 in the ten years ended with 1890, and numbered 57 in 1891, being in the ratio per 10,000 of the population of '47 during the first period, of '42 during the second period, and of 50 in the last year. If deaths from syphilis be considered apart from those caused by other venereal diseases, the annual numbers at the same periods would be 29, 33, and 47, and the proportions '36, '33, and '41, which contrast favourably with those in six of the ten following countries. It should be mentioned that in a considerable proportion of cases occurring in Victoria the disease was congenital.

^{*} See Dr. Raseri's paper, page 193.

721. Venereal disease has long prevailed amongst the Australian venereal aborigines, and was no doubt first communicated to them by Euro- disease amongst The late Mr. Curr* gave it as his opinion that "it was first introduced into Australia by the whites many years ago, and has never since ceased to commit terrible ravages among our tribes. Probably this disease alone would suffice to exterminate them."

722. Parasitic diseases, chief amongst which are thrush and Parasitic hydatids, caused 7 deaths in 1891 per 100,000 of the population, which was 1 below the average of the ten years ended with 1890, and about  $2\frac{1}{2}$  below the average of the ten years 1871 to 1880. These diseases are more prevalent in Victoria than in England.

723. Hydatid disease, which is said to be communicated to man by Hydatids. reason of the ova of the tape worm in dogs (Tænia Echinococcus) being taken into the stomach, generally in water, and to prove fatal to 25 per cent. of the human victims it attacks, during the nineteen years ended with 1891 has caused 930 deaths, or an average of 49 per annum. Per 100,000 of the population, deaths from this disease ranged from 3.79 in 1873 to 7.19 in 1879, the average for the first eight years being 5.18, for the ten succeeding years 5.50, and for the whole period 5.34. In the last seven years, however, the mortality from hydatids was much below that of the previous six years. following are the figures for the last nineteen years:—

DEATHS FROM HYDATIDS, 1873 TO 1891.

724. According to the returns of the nine years ended with 1890, Hydatids in as embodied in the following table, hydatids in a fatal form appear to be much more common in Victoria than in any of the other Austral-It should be mentioned, however, that medical men asian colonies.

asian colonies.

^{*} The Australian Race, Vol. I., page 227.

sometimes enter the cause of death simply as "disease of the liver, lungs, kidney, etc." In such cases inquiry should be made as to whether the "disease" referred to was hydatid disease or not, which may possibly not be done so rigidly in the other colonies as it is in Victoria, and for this reason the mortality from the complaint may appear to be relatively higher here than it really is:—

Note.—In Western Australia only 1 death in 1888, but none in the other years, were set down to this disease.

Hydatids in England.

725. Hydatid disease is much more fatal in all the Australasian colonies than it is in England and Wales, where there were only

^{*} Rates revised and corrected since last publication.

53 deaths from it in 1890, or a proportion of ·18 per 100,000 persons living, as compared with a mean of '20 in the five years 1881 to 1885.*

726. Dietic diseases, consisting principally of want of breast milk Dietic and alcoholism, caused in 1891 over 16 deaths per 100,000 persons living, which was  $2\frac{1}{2}$  less than in 1890, and  $5\frac{1}{2}$  below the average of the previous ten years. These diseases appear to be over three times as fatal in Victoria as in England.

727. In 1891, 90 deaths were set down to intemperance—of which Intemper-16 ended with delirium tremens—as against 103 in 1890, and an average of 95 during the ten years 1881-90, and of 65 in the ten years preceding that period. These figures furnish annual proportions per million persons living of 77 for 1891, 92 for 1890, 95 for the decennium 1881 to 1890, and 81 for the decennium 1871 to 1880, and would appear to indicate that the mortality from this cause was decreasing. As a matter of fact, however, returns of the mortality from intemperance are of doubtful value, as comparatively few deaths are set down to alcoholism pure and simple, although a large number of complaints are no doubt brought on or aggravated, and many lives are doubtless shortened, from that cause, which, however, is not mentioned in the returns. By the following figures, taken from Dr. Raseri's paper†—which must only be accepted for what they may be worth the mortality from alcoholism would appear to be as high in Victoria as that prevailing in most of the countries and towns named:—

Annual Death Rate from Alcoholism in Various Towns and COUNTRIES.

728. Of complaints classed under the head of "Constitutional Constitu-Diseases," the most prominent are phthisis and other tubercular diseases. diseases, and cancer; also rheumatism, gout, and diabetes mellitus. Under this class there were, in 1891, 253 deaths per 100,000 of the population, or 13 more than the average of the decade 1881-90, and

^{*} For further information respecting hydatid disease, see Victorian Year-Book, 1888-9, Vol. II., † Page 186. paragraphs 253 and 254.

37 above the average of the decade 1871-80. Of the 253 deaths per 100,000 referred to, 129 resulted from phthisis, or pulmonary consumption; 61 were set down to cancer; 39 to tabes mesenterica, acute hydrocephalus, and other tubercular or scrofulous diseases; and 24 to other constitutional diseases.

Phthisis.

729. Phthisis, or pulmonary consumption, caused 1,483 deaths in 1891, or 148 fewer than in the previous year, and fewer also than in any year since 1886. Except during the prevalence of epidemics, phthisis is the occasion of more deaths in Victoria than any other disease; * next to phthisis, diarrheat is usually the most fatal disease on the list (although in 1891 nine diseases stood before it), but this complaint causes barely two-thirds of the number of deaths set down It should moreover be borne in mind, as showing the to phthisis. baneful effects of phthisis as compared with those of the other diseases named, that the deaths ascribed to diarrhœa are for the most part those of infants and young children, whilst the majority of the victims of phthisis are at the adult period of life. The following table shows the number of deaths from phthisis and their proportion to the total population, in each of the last thirty-one years:—

DEATHS FROM PHTHISIS IN VICTORIA, 1861 TO 1891.

Note.—Deaths registered as occurring from hæmoptysis are included in this table.

^{*} See table following paragraph 693 ante.

[†] During recent years heart diseases (undefined) have sometimes caused more deaths than diarrhea.

[‡] For figures of mean population used in making these calculations, see table "Breadstuffs Available for Consumption" in Part "Production" in the second volume.

- 730. By the figures in the table it appears that the death rate Death rate from phthisis fell with tolerable steadiness from 1861 to 1871, but phthisis. since that period there has, on the whole, been a gradual increase. During the whole period of thirty-one years the deaths from this complaint were in the proportion of  $13\frac{1}{4}$  to every 10,000 persons living, during the first ten of those years that proportion was about  $12\frac{1}{2}$  (12·483), in the second ten it was more than  $12\frac{3}{4}$  (12·775), and in the last eleven it was  $14\frac{1}{5}$  (14·21). It must, however, be borne in mind that the proportions living at the ages at which phthisis is most fatal, viz., between 15 and 45, have also increased.* It will be observed that the death rate from phthisis in 1891 (12·93 per 10,000) was an exception to the rule, having been the second lowest recorded during the last 15 years.
- 731. Phthisis in Victoria generally affects males more heavily than Deaths of females. In 1891, 874 of the former, and 609 of the latter, died of males and that complaint; the males being in the proportion of 14.55, but the phthisis. females of only 11.15, per 10,000 of their respective sexes living.
- 732. The following table gives the number of deaths from phthisis Ages at death from at each age in 1891; also the proportion which such deaths bore to phthisis. the total deaths from all causes in 1891 and in the decennial period 1881-90:—

DEATHS FROM PHTHISIS, 1891 AND 1881-90.—AGES AT DEATH.

733. From a comparison of the figures in the last two colums, it Phthisis will be observed that, in proportion to the total deaths, the mortality most fatal to adults.

^{*} In 1881, the proportion of persons living between the ages referred to was  $43\frac{1}{2}$  per cent., and in 1891  $48\frac{1}{3}$  per cent. of the whole population.

from phthisis in 1891, at the age-periods between 15 and 35, was slightly below, but at all other age-periods considerably below the In the year under review, nearly one-third of the deaths in the colony between the ages of 20 and 35, nearly one-fourth of those between 15 and 20 and between 35 and 45, and nearly a seventh of those between 45 and 55, were caused by phthisis.

Phthisis in Melbourne and country.

734. Of the 1,483 deaths from phthisis in 1891, 849 occurred in Melbourne and suburbs (Greater Melbourne) and 634 in other parts of the colony. In proportion to population, the deaths from phthisis have always been much more numerous in the metropolis than in the remainder of the colony, as is shown by the following figures, which are the results for thirty-one years:—

DEATHS FROM PHTHISIS PER 10,000 PERSONS LIVING IN AND OUTSIDE GREATER MELBOURNE, 1861 TO 1891.

Death rate England.

735. In England and Wales, in the twenty-five years ended with phthisis in 1890, the death rate from phthisis, per 10,000 persons living, ranged from 26.02 in 1866 to 15.68 in 1888, the mean of the first five years of the period having been as high as 24.48, whilst that of the last five years was as low as 16.35.* The latter proportion, though considerably lower than that of Greater Melbourne, is still much higher than that of Victoria taken as a whole. It may be remarked that there is no

^{*} See Fifty-third Report of the Registrar-General of England, page xl., where it is stated that nearly one-third of the apparent decrease in the death-rate from phthisis is due to a large number of deaths formerly classed as resulting from that complaint being now set down to bronchitis, which disease consequently appears to have become more fatal than formerly. Thus the death rate from diseases of the respiratory system (except croup) rose from 33.94 in 1866-70 to 36.39 in 1886-90 per 10,000 living.

doubt the death rate from phthisis in the metropolis has for years past been swelled by the presence of persons who started from Europe whilst suffering from the disease in an advanced stage, and who were induced to take the voyage under the hope that benefit might be derived from the Australian climate, but have landed in Melbourne only to die there.

- 736. Of the 278 Chinese who died in Victoria in 1891, 38, or 14 Phthisis per cent., fell victims to phthisis. In the previous ten years 16 per Chinese cent. of the deaths of Chinese were from phthisis.
- 737. Although only one out of the 18 deaths of Aborigines in Phthisis 1891 was set down to phthisis, it is stated on good authority that Aborigines. phthisis is the chief cause of the death of the Australian Aborigines, who, when once affected, very seldom recover.
- 738. The rate of mortality from phthisis in Victoria would appear, Phthisis in Aust by the calculations in the following table, to have been, over a series of years, much higher than in any other of the Australasian colonies, excepting Queensland, where the proportion is unduly swelled by the high mortality amongst the Polynesians.* It will be observed that the figures of the other colonies in the several years exhibit more variation than those of Victoria, and that Queensland is the only colony besides Victoria in which the rate in any of the periods given exceeded 13 per 10,000:—

DEATHS FROM PHTHISIS IN AUSTRALASIAN COLONIES, 1873 to 1890.

^{*} It is pointed out by the Registrar-General of Queensland, in his Annual Reports, that the death rate from phthisis as well as from other complaints in that colony is considerably swelled by the high mortality amongst the Polynesians. Nearly half the deaths from phthisis in 1884 and 1885, nearly two-fifths in 1886 and 1887, nearly one-third in 1889, and nearly one-fourth in 1890, were of Polynesians, although they form a very small section (about  $2\frac{1}{2}$  per cent.) of the total population. Excluding the Polynesians from the calculation, the death rate from phthisis in Queensland in 1886 was only 9.2, in 1887 only 10.2, in 1888 only 8.75, in 1889 only 8.87, and in 1890 only 10.47 per 10,000. The general death rate of Polynesians in Queensland during 1889 was as high as 55, and during 1890 it was 48 per 1,000.

Note.—In Western Australia, the deaths from phthisis in the last six years were as follow:—29 in 1885, 24 in 1886, 46 in 1887, 42 in 1888, 39 in 1889, and 43 in 1890; the proportions per 10,000 of the population being respectively 8.51, 6.45, 11.03, 9.93, 9.06, 8.97; average of six years 8.98.

Tubercular diseases.

739. Deaths from tubercular diseases, viz., tabes mesenterica, tubercular meningitis (acute hydrocephalus), phthisis, and "other forms of tuberculosis,"† taken as a whole, numbered 13,052 in the ten years 1871 to 1880, 17,590 in the ten years 1881 to 1890, and 1,962 in 1891. These numbers furnish proportions per 10,000 of the population of 16.38 deaths annually at the first period, 17.57 at the second, and 17.11 at the last, which are all lower than the proportions relating to any of the subjoined countries except Spain:—

[‡] See Dr. Raseri's paper, page 193. The diseases referred to are there termed "Tubercolosi diffusa, Tisi polmonare, Tubercolosi meningea, ed Idrocefalo."

740. Next to phthisis, the most fatal of the constitutional diseases Deaths from This complaint caused 699 deaths in 1891, or 73 more Victoria. than in the previous year. Cancer in a fatal form has apparently been fast increasing of late years, for during the ten years ended with 1880 it caused only one death in every 41 from all causes, but in the ten years ended with 1890 the proportion had risen to 1 in 29; moreover since 1861 the death rate from it has increased steadily from less than 2 to over 5 per 10,000 of the population; whilst in 1891 the exceptionally high rate of 6.1 was reached—the highest previous to that year being 5.8 in 1889. The following table shows the annual number of deaths from cancer, and the number per 10,000 persons living, in the three decades ended with 1881-90, and in each of the last eleven years:—

DEATHS FROM CANCER, 1861 TO 1891.

741. Cancer is a complaint which generally affects females more Proportions than males.* In the thirty-one years of which mention is made in who died of the table, 91 of the former have died of it to every 100 of the latter, whereas the proportion of females to males at ages at which cancer is most prevalent (i.e., above 30 years of age) has over the whole period† been considerably below the proportion named. The year 1891, however, appears to have been an exception to the rule, for

^{*} The difference may not really be so great as it appears to be from the figures. See Victorian

Year-Book, 1887-8, Vol. I., paragraph 699.

† At the age referred to, females in the population were in the proportion of 42 at the census of 1861, of 59 at the census of 1871, of 74 at the census of 1881, and of 80 at the census of 1891. to every 100 males.

whilst only 72 females died of cancer to every 100 males in that year, females over the age of 30 in the total population were in the proportion of 80 to every 100 males.

Cancer in Australasian colonies. 742. Judging from the experience of the nine years ended with 1890, cancer is much more fatal in Victoria than in any other Australasian colony except Tasmania, the rate in which is the same as the Victorian rate. Tasmania is a colony in which—as cancer is essentially a complaint of advanced life—the large proportion of old people would naturally lead to the expectation of a high death rate therefrom. The following are the figures for the nine years referred to:—

DEATHS FROM CANCER IN AUSTRALASIAN COLONIES, 1882 to 1890.

		Annual Dea	ths from Cancer.
Colony.	Period.	Number.	Proportion per 10,000 Persons Living

743. In England and Wales there has for years past been a Deaths from progressive increase in the death rate from cancer. This rate, in the five years ended with 1890, was much higher than that prevailing in any Australasian colony. The following figures are taken from the reports of the Registrar-General, who, however, indicated that he entertained doubts as to whether the increase shown by the figures was not partly due to improved diagnosis and more careful statement of the cause*:—

England and Wales.

#### DEATHS FROM CANCER IN ENGLAND AND WALES.

Seat of cancer.

745. Any part of the body is liable to be affected by cancer. The affected part is not always mentioned in the returns, but the Registrar-General of Ireland† succeeded in obtaining information as to the seat of the complaint in 1,810 out of 2,145 fatal cases which occurred in Ireland during 1890. The figures are rearranged in the following table, the sexes being distinguished, and the number placed in the order of the frequency of their occurrence in different parts of the body:—

^{*} See Dr. Raseri's paper, page 193.

[†] See 27th Report of the Registrar-General of Ireland, page 17.

[†] These calculations have been made in the office of the Government Statist, Melbourne.

746. It appears from the figures that in both cases the stomach is Parts most the part most liable to cancer, next the liver in men, also in women affected. after the breast and uterus. The much greater frequency of cancer on the lips, tongue, throat, and jaw in men than in women would seem to point to smoking as a probable exciting cause. It would be interesting to know whether cancer of these parts occurs more commonly to smokers than to non-smokers.

747. Developmental diseases,* Class V., caused 127 deaths in Develop-1891 to every 100,000 of the population. Of these 61 were due to diseases. diseases peculiarly affecting infants, such as premature birth and malformations, and 66 to old age. The rate of mortality from the whole class in 1891—viz., 127 per 100,000—appears to have been about 21 above the average of the ten years 1881-90, and 52 above that of the ten years ended with 1880; the increase, especially as compared with the last named period, being chiefly confined to deaths from old age. The increased death rate from old age is accounted for by the circumstance that the proportion of old people (75 and upwards) in the population has gradually increased from  $\frac{1}{4}$  (·25) per cent. in 1871, and between  $\frac{1}{2}$  and  $\frac{2}{3}$  (·57) per cent. in 1881, to over  $\frac{3}{4}$  (·79) per cent. in 1891,  $\dagger$  whilst the average age of such persons has advanced also. The actual deaths of infants born prematurely numbered 540 in 1891—which number gives a proportion of 11 per cent. of the total deaths under one year, or  $1\frac{2}{5}$  per cent. of the total births recorded, which percentages are above the average during the ten years ended with 1890, when they were  $9\frac{3}{4}$  and  $1\frac{1}{4}$  respectively. The death rate from this class of complaints is always much higher in England than in Victoria.

748. Local diseases, Class VI., or diseases of special organs or Local systems, usually cause a much higher mortality than any other class of complaints; thus, in 1891, 8,727 deaths, or 47 per cent. of the deaths from all causes, were ascribed to them, that being about the same proportion as in the ten years 1881 to 1890. The deaths from diseases placed in this class were in 1891 in the proportion to every 100,000 of the population of 761, or 70 above the average of the previous

^{*} This class of diseases differs from that under the old nosology; dentition, paramenia and childbirth, and atrophy and debility not being now classed as developmental diseases.

[†] The number of persons enumerated at the age 75 or upwards was 1,832 in 1871, 4,938 in 1881 and 8,982 in 1891.

A fifth of these diseases were due to affections of the brain and nerves; over a sixth to those of the circulatory system, including heart disease; nearly one-third to lung and throat diseases—viz., croup, bronchitis, pneumonia, pleurisy, etc.; over a fifth to diseases of the digestive organs;  $5\frac{1}{2}$  per cent. to diseases of the urinary organs; a little over  $\frac{12}{5}$  per cent. to accidents of childbirth; and the remainder to diseases of the locomotive, generative, and integumentary systems; of the organs of special sense; and of the lymphatic and ductless glands, in the order named. In the year under review the death rates from complaints classed under all the principal sub-classes of local diseases, except diseases of the nervous and integumentary systems and childbirth, in which there was a falling off, especially in the last named, were much above the average of the ten years ended with 1890, and, with the same exceptions, they were even higher still than in the earlier period 1871-80. In England, the death rate from local diseases is, on the average, fully 40 per cent. higher than the death rate from that class of complaints in Victoria.

Diseases of respiratory system.

749. The mortality from diseases of the respiratory system in 1891 was much above the average. The proportion in 1891 was 235 deaths to every 100,000 persons living, while it was only 213 in the ten years 1881-90, and 195 during the ten years 1871-80. The diseases in this group cause, on the average, half as many deaths again as phthisis (which is not included amongst "lung diseases," being classed as a "constitutional disease*)." The victims are, for the most part, both young children and old people, the majority dying in the winter quarter (July to September). In the year under review the actual number of deaths from these causes was 2,697, being equal to not quite one-seventh of the total mortality; and of these pneumonia caused 1,126, bronchitis 982, congestion of the lungs 164, and croup 170. Of those who died from these complaints, 1,011 were under 5 years—about three-fifths of these being under 1 year—and 1,102 were over 50 years of age. If deaths from phthisis be added to those from diseases of the respiratory system, it will be found that altogether 4,180 deaths in 1891 (or 121 more than in 1890) were from diseases particularly affecting the organs of respiration, which is equal to nearly one-fifth of the total mortality.

^{*} See paragraph 728 ante.

750. Bronchitis and pneumonia, with congestion of the lungs, Bronchitis caused 11,477 deaths in the ten years ended with 1880, 16,404 in the ten years ended with 1890, and 2,272 in 1891, which numbers furnish proportions per 10,000 of the population of 14.40 deaths annually for the first period, of 16.38 annually for the second period, and of 19.81 for 1891. The complaints referred to are, according to the following figures, much less fatal here than in any of the countries named except Prussia, it being assumed that congestion of the lungs is included with bronchitis and pneumonia in the returns of the various countries:—

and pneumonia in countries.

## Annual Death Rate from Bronchitis and Pneumonia in VARIOUS COUNTRIES, 1881 TO 1884.*

751. The death rate from a given complaint is usually ascertained Deaths in by comparing the number of deaths from it with the number of

persons living, but the death rate of women in childbed is better realized by comparing the number of deaths of parturient women with the total number of births. Such deaths are classified in two ways. If the death is supposed to occur merely from the consequences of childbearing without specific disease, it is set down under the head of Childbirth, Class VI., Sub-class 9; but, if it should arise from Puerperal Fever, it is placed under that head, Class I., Sub-class 6. In 1891 the proportion of deaths of child-bearing women to the number of children born was the lowest but one recorded in the last eleven The proportions which prevailed in the septennial period ended years. with 1870, the two decennial periods ended with 1880 and 1890, and in each of the last ten years, are shown in the following table:-

^{*} See Dr. Raseri's paper, page 193. The complaints referred to are there termed "Bronchite e Polmonite."

Increase of deaths in epidemic periods.

752. In 1884, the death rate of parturient women showed a sudden childbed at increase concurrently with the prevalence of an epidemic of measles, followed by a remarkable decrease in 1885 coincidently with the gradual disappearance of that epidemic. It is a singular fact that at or about the four periods during the last twenty-six years at which epidemics of measles and scarlatina having prevailed in Victoria, † viz., 1866-7, 1874-5, 1881-2, and 1884, the mortality of child-bearing women largely increased. Whether this is only a coincidence, or whether there is any connexion between the two circumstances, is a matter which merits the consideration of the medical faculty. It should be mentioned that the visitation in 1881-2 differed somewhat from the others, as the deaths of child-bearing women did not increase in numbers concurrently with the epidemic, but in the year following that in which it was most fatal.

Deaths in Victoria and United Kingdom.

753. The proportion of women dying in childbed during the whole childbed in period of twenty-eight years was 1 to 172 births, and in 1891 the proportion was 1 to every 201 births. In the decennial period ended with 1890, the proportion was 1 to every 169 births; in that ended with 1880, it was as high as 1 in every 155 births; and in the septennial period 1864-70 it was as low as 1 to every 204 births. average proportions for the two latest periods are much higher than those in England and Wales, where, in the ten years ended with 1889,

^{*} For number in each year see last edition of this work, Vol. I., table following paragraph 657.

[†] See last issue of this work, Vol. I., table following paragraph 616.

206 births occurred to each recorded death of a mother.* land, I woman died in childbirth to every 149 births in 1874, and I to every 197 births during 1889; and in Ireland, during the ten years, 1869-78, 1 woman died in childbirth to every 151 births, and in 1890, 1 to every 152.

754. In the Midwifery Department of the Melbourne Women's Deaths from Hospital, 848 women were confined, and 795† infants were born alive, in Women's Hospital. during the year ended 30th June, 1891. Five deaths of mothers occurred during or shortly after parturition, or 1 death of a mother to every 170 deliveries, or to every 159 births, as compared with 1 death of a mother to 89 deliveries, or 83 births, in 1889-90, 1 to every 76 deliveries, or 71 births, in 1888-9; and 1 to every 168 deliveries, or 158 births, in 1887-8. During the ten years ended with 1890-91, the proportion has varied from a minimum death rate of 1 to every 168 deliveries or 158 births in 1887-8 to a maximum of 1 to every 17 deliveries or 16 births in 1884-5—the mean for the whole period being 1 to every 73 deliveries or 68 births. This average is about  $2\frac{1}{2}$  times as high as that for the whole colony, where a proportion of 1 to every 168 births prevailed during the corresponding period; but it should be mentioned that, all over the world, maternity hospitals are subject to receive a worse class of cases than the average of those dealt with outside, women not unfrequently being brought in such a state as to render their recovery from the first almost hopeless; therefore, in all such institutions, the death rate of the inmates is higher than that which prevails amongst child-bearing women in the general population. should be mentioned that the committee of management of this hospital attribute the low rate of mortality in 1887-8 to the fact that antiseptic precautions were more rigorously carried out than they had been in former years; but it will be noticed that such a low rate was not maintained in 1888-9 and 1889-90.

755. In proportion to the number of confinements, deaths of lying-Deaths in in women appear to be on the average more common in Victoria than Australin any other Australasian colony.‡ In 1890, however, the proportion was higher in New Zealand than it was in Victoria. The following

chilabea in colonies.

^{*} There is reason to believe that the mortality from childbirth and metria in England is much understated, as the sending out of letters of inquiry in 1882—an exceptional proceeding—respecting certain ill-defined causes of death had the effect of increasing the recorded mortality from childbirth and metria ten per cent. If this correction be applied to the average above stated, the proportion would be 1 death of a mother to as few as 185 births.—See 45th Annual Report of the Registrar-General of England, page xvii.

[†] There were 7 cases of twins and 1 case of triplets.

It is certain that in most, if not all, countries many deaths occurring from circumstances connected with childbirth are not certified to by medical men as due to that cause. For remarks on this subject, see Victorian Year-Book 1889-90, Volume I., paragraph 719.

table contains a statement of the death's recorded as having occurred from childbirth and metria in all the Australasian colonies during two average periods since 1872, and in each of the last five years, or for as many of those years as the information is available for, and the proportion of such deaths to every 10,000 children born alive in each colony:—

Note.—In Western Australia 6 deaths of child-bearing women occurred in 1887, 3 in 1888, 4 in 1889, and 3 in 1890, or at the rates of 36.7, 19.8, 25.09, and 19.2 per 10,000 births, respectively.

Low death rate from childbirth in colonies, 1890.

756. The above figures show that, in proportion to the children born alive, the number of deaths of child-bearing women in 1890 was below the average of a recent decade in all the colonies except New South Wales and Tasmania. In those colonies the rates were slightly above the average.

Deaths from child-bearing in various countries.

757. Comparing the deaths of child-bearing women in Victoria with every 10,000 of the population, the proportions annually are 2.17 for the decennial period 1871 to 1880, 1.85 for the decennial period

^{*} Average of years 1875-80.

1881 to 1890, and 1.67 for 1891. These and the following figures show Victoria to stand rather high in regard to the mortality of women in child-bed as compared with many other countries, and especially so as it would appear that deaths from diseases of pregnancy, as well as from circumstances attendant upon child-bearing, are included in the following list, which they are not in the figures for Victoria:-

### ANNUAL DEATH RATE FROM DISEASES OF PREGNANCY AND CHILD-BEARING IN VARIOUS COUNTRIES, 1881-84 *

towns) 2.02	Germany (principal towns) 1.23
Scotland 1.87	

758. Deaths from external causes, Class VII., in proportion to violent population, were formerly twice as numerous in Victoria as in England and Wales; but in recent years, as the number of individuals engaged in mining operations has decreased, and greater precautions are taken for the prevention of accidents, the rate in the former has fallen considerably. Over a series of twenty-seven years, the average annual number of violent deaths per 100,000 of the population was 136, but during the ten years 1871-80 it was only 108, and in the subsequent ten years it fell to as low as 97, and in 1891 to 94. The last-named rate is higher by one-half than the rate prevailing in England and Wales, where it averages only  $63\frac{1}{2}$ . The greater frequency of violent deaths in Victoria than in England appears in all classes of such deaths, those from accidents and executions being, in proportion to population, about a third more numerous, suicides half as numerous again, and homicides twice as numerous.

759. The number of violent deaths recorded in Victoria during violent 1891 was 1,079, of which 913, or 85 per cent., were ascribed to accident; 40, or 4 per cent., to homicide; and 119, or 11 per cent., to suicide. Deaths from accidents were formerly more numerous than those from any single disease, and more recently than those from any specific disease except phthisis and diarrhea.† Thirty-nine per cent.

deaths, 1891 and previous years.

^{*} See Dr. Raseri's paper, page 193; the complaints referred to are there termed "Malattie di † See table following paragraph 693 ante. gravidanza, parto e puerperio."

of the deaths from accidents in 1891 were due to fractures, 26 per cent. to drowning, and 9 per cent. to burns and scalds. Allowing for increase of population, homicides were much above, but suicides were below, the average of the ten years ended with 1890. The following table shows the number of deaths and the exact modes of death under the heads of accident and suicide, also the number of deaths from homicide and execution, during the year 1891 and the ten years ended with 1890, the sexes of those who died being distinguished:—

Violent
deaths in
proportion
to total
deaths.

760. During the ten years ended with 1890, 80,559 males and 59,157 females died of specified causes; and it results, from these figures and those in the foregoing table, that, of the males, 1 in every 11 died a violent death; 1 in every 13 died of an accident; 1 in every

^{*} Including one case of justifiable homicide.

494 was a victim to homicide; 1 in every 87 committed suicide; and 1 in every 6,197 was executed. Of the females, 1 in every 28 died a violent death; 1 in every 33 died of an accident; 1 in every 466 died by the hand of another; 1 in every 344 committed suicide; but, happily, not one was executed.

761. Males are much more subject to violent deaths than females. Violent Of those who so died in 1891, 849, or 79 per cent., belonged to the male, and 230, or 21 per cent., to the female sex. The proportions which prevailed during the ten years ended with 1890 were 78 and 22 per cent. respectively.

males and

762. Omitting fractions, it may be roughly stated that, where violent 1 female dies a violent death in Victoria, 4 males die violent deaths; proportion where I female dies of an accident, 4 males die of accidents; where 1 female commits suicide, 5 males do so; and about one-third more males are murdered than females. Only 1 woman has been executed in the colony since its first settlement; but in the  $40\frac{1}{2}$  years since Victoria has been an independent colony as many as 139 males have been executed.

females.

- 763. The only violent deaths which habitually affect females more Burns and than males are those resulting from burns and scalds. All other circumstances which occasion such deaths, as a rule, bear more hardly upon males than upon females.
- 764. One hundred and nineteen persons took their own lives in suicidal 1891, as compared with 123 in 1889, and 143 in 1888. During the ten years ended with 1890 the mean annual number of deaths by suicide was 110.
- 765. Hanging is the most common mode by which men commit Modes of suicide, shooting the next, cutting or stabbing and drowning, with Victoria. almost equal frequency, the next, and taking poison the next. Females most frequently take their lives by drowning or by taking poison, next by stabbing or hanging, but only seven times in 172 cases which occurred during the ten years ended with 1890 by shooting. It may be mentioned that suicide by shooting is much more common now than formerly, the cases in that decennial period being nearly three times as numerous as in the preceding one.
- 766. The Registrar-General of England in his 46th Report gives Modes of the following table, showing the proportion, during the ten years England. ended with 1880, of suicides effected by different methods in England and Wales. With the exception of shooting, the relative frequency

of each method follows substantially the same order as that obtaining in Victoria:—

Modes of committing Suicide in England and Wales.

Suicides of Chinese.

767. Suicide frequently occurs amongst the Chinese. Four men of this race committed that act in 1890, and seven in 1891. Of the 11 referred to, all but two hanged themselves. The total number of Chinese males in the colony was, according to the census of 1891, 8,772; so that those who committed suicide during 1890 were in proportion of about 1 in 2,200, and during 1891 about 1 in 1,250. In the general male population the proportion of persons committing self destruction averages only 1 in about 5,650.

Suicides in Australasian colonies. 768. According to the results in the following table, it would appear that, in proportion to population, suicide is more common in Victoria than in any other Australasian colony except Queensland. It should, however, be stated that the death records frequently do not upon the surface show that the death has been suicidal, and close examination, with sometimes further inquiry, is therefore necessary to determine that fact. It is hence likely that the full extent to which suicide prevails in some of the colonies is not ascertained. The following are the average annual suicides and their proportion to every 100,000 of the population during the eighteen years ended with 1890, divided into two periods of eight and ten years, also during each of the last five years, recorded in all the Australasian colonies except Western Australia, for which the information is obtainable for only three of those years:—

DEATHS FROM SUICIDE IN AUSTRALASIAN COLONIES, 1873 **TO** 1890.

Note.—In some instances the proportions of deaths from accident, homicide, and suicide are not for the same period as those from violence of all kinds.

Proportion of violent deaths in different countries.

773. It will be seen that the list is headed by five Australasian colonies, in all of which the proportion of violent deaths is higher than in any of the European countries named. Victoria, however, stands below the other four colonies referred to, and immediately above Switzerland, which, with the United Kingdom and England and Wales, stands immediately above Tasmania and South Australia. According to the figures, the countries in which the proportion of accidents is greatest are Queensland and Western Australia; the country in which the proportion of homicides is greatest is Western Australia; and the countries in which the proportion of suicides is greatest are Austria and Switzerland.

Railway accidents.

774. The following table gives a statement of the number of cases of death and injury from accidents on the Government lines of railway during the thirty-two and a half years ended with 30th June, 1891, embracing the whole period of the existence of railways in Victoria:—

^{*} Not including executions.

^{*} The high mortality in 1886-7 was chiefly due to the Windsor railway accident. So far as the numbers killed and injured are concerned, this was the worst railway accident which has occurred in Victoria.

Railway
passengers
and servants killed
and
injured.

775. It will be observed that, in the whole period of thirty-two and a half years, 680 persons were killed and 2,768 were injured on the State lines of railway, and that, exclusive of trespassers, persons crossing the lines, etc., 271 of the former and 1,299 of the latter met their death or injury in consequence of their own misconduct or want Of the persons killed throughout the period, 42 were passengers, and as many as 282 railway or contractors' servants; 30 of the former, and 241 of the latter, having suffered in consequence The passengers injured numbered 1,372, of their own carelessness. and the railway servants 1,133; as many as 870 of the latter, but only 429 of the former, suffered from their own action. At crossings, 70 persons were killed, and 44 injured. As many as 256 trespassers were killed; these no doubt included persons who committed suicide by placing themselves in the way of trains. The trespassers injured have numbered 86, half of whom received their injuries during the last four years.

^{*} See footnote (*) on previous page.

776. In the eighteen years ended with 1891, embracing the whole Gold-mining period during which the Regulation and Inspection of Mines and Machinery Statutes* have been in operation, 906 persons lost their lives, and 2,030 persons were injured, from accidents connected with gold-mining operations. The following were the numbers in each year and their proportion to the number of miners at work:—

DEATHS AND INJURIES FROM GOLD-MINING ACCIDENTS, 1874 to 1891.

777. In 1891, fatal mining accidents numbered 9 less than in the Gold-mining previous year, and, in proportion to the number of miners at work, 1891. was lower than in any previous year shown in the table. parison with earlier years, the persons killed and injured in and in connexion with mines have much diminished both in numbers and in proportion to the miners at work.

778. According to the mean of the eighteen years to which refer-Gold-mining ence is made, 1 gold-miner in every 661 loses his life annually. 1891 the proportion was as low as 1 in 1,131. These proportions contrast favourably with the proportion of fatal accidents in the metalliferous mines of Great Britain and Ireland, where, according to

in Victoria and Eng-

^{* 37} Vict. No. 480, 41 Vict. No. 583, 45 Vict. No. 719, and 47 Vict. No. 783

the report of Her Majesty's Inspectors of Mines for 1883, 1 person in every 584 employed in and about mines lost his life by accident during the year, and 1 in every 607 during the ten years 1874 to 1883. This is exclusive of coal mines, in respect to which the proportion of fatal accidents is much higher. Dr. Raseri says that in Italy, during the six years 1879 to 1884, 1 miner in 450 lost his life annually by accident.

Causes of gold mining accidents.

779. It appears by the following table that, in the eighteen years named, 1,481, or 50 per cent., of the gold-mining accidents in Victoria were caused by the fall of earth or materials; 559, or 19 per cent., by falling down shafts, etc., and cage accidents; 368, or 12 per cent., by explosions, principally of blasting charges; and the balance, or 19 per cent., by timber and truck accidents, machinery in motion, foul air, flooding, and undescribed casualties:—

Coal mining accidents.

780. One miner was injured through a coal-mining accident in 1891. During the three years 1889-91 seven persons were injured at coal mines, but there is no record of anyone having been killed in this class of mining during the same period.

781. Under the Factories and Shops Act 1890 (54 Vict. No. 1091) Accidents in it is prescribed, under a penalty not exceeding £5 for non-compliance, 1891. that notices shall be sent to the Inspector of Factories, and to the certifying medical practitioner for the district, of any accident causing loss of life to a person employed in a factory or workroom, also of any accident whereby a person so employed receives bodily injury, provided it is produced either by machinery moved by steam, water, or other mechanical power, or through a vat, pan, or other structure, filled with hot liquid or molten metal or other substance, or by escape of gas, steam, or metal, and is of such a nature as to prevent the person injured by it from returning to his work in the factory or workroom within forty-eight hours of the occurrence of the accident. The following cases of injury were reported in the last two years:—

ACCIDENTS IN FACTORIES OR WORKROOMS, 1890 AND 1891.

Nature of Injury.	Ma	les.	Fem	ales.

782. Of the males who were killed or injured in factories or work- Factory rooms, 39 or 45 per cent. in 1890, and 60 or 64 per cent. in 1891, were to persons under 20 years of age. All but one of the females injured in the two years were under 20 years of age.

under 20.

783. In 1891, the year under review, there were no fewer than Ill-defined 1,268 deaths in Victoria from ill-defined or unspecified causes, or nearly 7 per cent. of the deaths from all causes, as compared with death. over 7 per cent. in 1890,  $7\frac{3}{4}$  per cent. in the ten years ended with 1890, and 7 per cent. in the ten years ended with 1880. The great majority of these—viz., 1,092 in 1891—were returned as from atrophy and debility; whilst 27 (in 1891) were set down to tumors, 30 to dropsy, 12 to abscess, 32 to other ill-defined causes, and in 75 cases the causes of death were altogether unspecified.

causes of

Atrophy and debility in Victoria.

784. The mortality under the head of atrophy and debility is almost entirely confined to infants and young children—thus, of the 1,092 deaths set down thereto in 1891, 1,018 were under 5 years, 935 were under 1 year, and 264 were under 1 month, of age. It is probable that a large number of these deaths might have been returned more definitely if medical men had attached to accuracy of record the importance it merits. The following are the numbers of both sexes recorded as having died from atrophy and debility in each of the last eleven years; also the averages for three periods between 1867 and 1890:—

Annual Deaths from Atrophy and Debility, 1867 то 1891.

Sex of those who died

785. Notwithstanding the proportions of the sexes of persons at of atrophy, ages to be affected by atrophy and debility were about equal, it will be observed that in every one of the periods except the year 1890 more males died than females. During the ten years ended with 1890, females died of these complaints in the proportion of 85 to every 100 males.

Atrophy and debility in Australasian colonies.

786. The practice of returning atrophy and debility as causes of death appears to be generally no less frequent in most of the other Australasian colonies than in Victoria; but in Queensland during the four years ended with 1890, comparatively few deaths were so recorded. The following are the figures for the five years ended with 1890, and the average for the nine years 1882-90:—

DEATHS FROM ATROPHY AND DEBILITY IN AUSTRALASIAN COLONIES, 1882 TO 1890.

			ths from Atrophy Debility.

^{*} Figures revised and corrected in accordance with amended estimates of population.

Causes of death of octogenarians.

787. The number of deaths of persons over 80 years of age, and their exact ages at death, have been already quoted for the year 1891, and the two preceding periods of nine and eleven years respectively.* The following table shows the causes of death of these persons:—

Causes of Death of Octogenarians, 1871 to 1891.

Causes of Dear	th.	Year	1891.		Years, 2-90.		n Years with 1881.

^{*} See table following paragraph 685 ante.

788. It will be noticed that during the twenty-one years referred complaints to in the case of almost half the males and five-ninths of the females, no complaint was set down except old age. Little is to be learnt from such a vague definition, and it is much to be wished that medical men would endeavour to describe the causes of death with more precision. Of the remainder, about one-eighth of both sexes died of diseases of the organs of respiration, chiefly pneumonia and bronchitis, and over one-eleventh died of affections of the brain and nerves.

to octogenarians— 1871-91.

789. The compilation of the returns of the census of 1891 is not occupations sufficiently advanced to admit of information being given respecting the occupations of those who died, but such tables, based upon the results of the census of 1881, and taken in connexion with the mortality returns of the census year and the year immediately preceding and immediately following it, were published in the Statistical Register of Victoria for 1883, and abstracts of these have been given in former issues of the Victorian Year-Book.* The following is a summary of the proportions of adult males of each class of occupations who died annually in the three years referred to, the groups being arranged according to the order of fatality:-

### OCCUPATIONS OF ADULT MALES AT DEATH IN ORDER OF FATALITY.

Annual Deaths of Males over 20 per 1,000 Living. 1. Engaged in industrial pursuits 21.89entertaining and serving... 20.422. commercial pursuits 17.623. " professional pursuits 16.514. " food and drinks 15.53**5**. books and literature 12.486. on land and with animals 9.967.

790. As bearing upon the mortality, it is important to consider Medical men whether the number of medical men is sufficient to minister to the countries. health of the population. In 1891, there were in Victoria 835 legally qualified medical practitioners, which number gives a proportion of 1 to every 1,366 persons, or to every 105 square miles. The first of these proportions compares most favourably with that in other countries, the only one known to have a higher proportion being

^{*} See Statistical Register, 1883, page 278; also Victorian Year-Book, 1883-4, paragraph 619; ibid., 1884-5, paragraph 669; ibid., 1885-6, paragraph 684, et seq.

Switzerland. In regard to the second proportion, in consequence of Victoria being much more thinly peopled than any of the countries of the old world, it is naturally low; lower, in fact, than in any other countries respecting which the information is at hand, except Sweden, Norway, and Russia. These results are shown in the following table, in which the countries are arranged in order according to the proportion of medical men to the population and to the area of each country:—

MEDICAL MEN IN PROPORTION TO POPULATION AND AREA IN VARIOUS COUNTRIES.

Countries.		Year.	Medical Men per 100,000 Persons Living.	Countries.	Square Miles to a Medical Man.
Switzerland	•••	1880	75	England and Wales	3.9
Victoria		1891	73	Belgium	4:7

Sweden		1883	13	Sweden	294.9

Note.—The figures, except those relating to Victoria, have been taken (with some corrections) from a table given by Dr. Raseri. The area per medical man is there stated in square kilomètres, which have been converted into square miles on the assumption that one of the former is equal to 386 of one of the latter.

Sickness and death in general hospitals.

791. There are 39 general hospitals in Victoria, 9 of which are also benevolent asylums. The total number of patients discharged from these institutions during the year ended 30th June, 1891, was 15,481, and the number of deaths was 1,859. There was thus 1 death to every 8.3 discharges during the year 1891, as against 1 death to every 7.9 during the previous year. The following table gives a list of the various hospitals throughout the colony, also a statement of the number of discharged, the number of deaths which occurred in the year ended 30th June, 1891, and the proportion of deaths to cases in each hospital during that year:—

# SICKNESS AND MORTALITY IN GENERAL HOSPITALS.

795. The rate of mortality in hospitals would appear by the figures Deaths in to be higher in Victoria than in any of the other countries named. In the absence of information, it is impossible to say whether the cases treated in the hospitals of this colony may not be of a worse class than those in the other countries, or whether hospitals for special complaints—ophthalmic, maternity, etc., where the mortality would naturally not be so great as in general hospitals—may not be included with the latter in the returns of some of the countries.

and other hospitals.

796. The patients discharged* from the Infirmary Department of Sickness and the Women's Hospital numbered 271 during the year 1889-90, and 262 in 1890-91. The deaths in the same institution numbered 16 in the former, and 12 in the latter year. Therefore, 1 patient in 17 who left the institution died in 1889-90, and 1 in 22 in 1890-91.

deaths in Women's Infirmary Depart-

797. In the Midwifery Department of the Women's Hospital, Deaths of Melbourne, 795 women were confined in 1889-90, and 848 in 1890-91. Nine died in the former period, and 5 in the latter. Thus, 1 woman in 88 died in 1889-90, and 1 woman in 170 in 1890-91. From the founding of the institution to the end of June, 1891, 16,126 women were accouched therein, to of whom 271 died, which is equivalent to 1 death to every 60 confinements.‡

mothers in Women's Midwifery Department.

798. The infants born alive in the Women's Hospital numbered Deaths of 748 in the year 1889-90, and 795 during the year 1890-91, and of these 34 in the former and 25 in the latter year died before being taken from the institution; thus, 1 infant in 22 died in the former, and 1 in 32 in the latter year.‡

infants in Women's Hospital.

^{*} The discharges referred to in this and the following paragraphs in all cases include deaths. † Including 87 women accouched outside the hospital by midwives connected with the ‡ See paragraph 675 ante. institution.

Sickness and deaths in Children's Hospital.

799. In the Melbourne Hospital for Sick Children the discharges numbered 839, and 72 deaths occurred, in the year 1889-90; and there were 683 discharges, and 59 deaths occurred, during the year 1890-91. These numbers furnish a proportion of 1 death to every 12 patients in each year.

Sickness and deaths in benevolent asylums.

800. Cases of sickness in benevolent asylums (exclusive of Melbourne Immigrants' Home) numbered 1,706 in 1889-90, and 3,050 in the year 1890-91; deaths numbered 272 and 234. The deaths were thus to the cases treated in the proportion of 1 to every 6 in 1889-90, and of 1 to 13 in 1890-91.

Sickness and deaths in Immigrants' Home. 801. In the Melbourne Immigrants' Home the cases of sickness in the year 1889-90 amounted to 664, and the deaths to 109, or 1 death to every 6 cases of sickness. In the year 1890-91 the cases of sickness in this institution numbered 845, and the deaths 114, or 1 death to every 7 cases of sickness.

Sickness and deaths in orphan asylums.

802. In 1889-90 the cases of sickness in orphan asylums numbered 193, and the deaths 5. In the year ended 30th June, 1890-91, these numbers were 21 and 6 respectively. Thus 1 death occurred to every 38 cases of sickness in 1889-90, and 1 death in every  $3\frac{1}{2}$  cases in 1890-91.

Sickness and deaths in lunatic asylums.

803. In hospitals for the insane, during 1890 the cases discharged numbered 754, and during 1891 they numbered 909. The deaths amounted to 264 at the former period, and 293 at the latter, or an average of 1 death to every 3 cases of disease in both years.

Sickness and deaths in gaols.

804. In gaols and penal establishments 2,655 cases of sickness occurred in 1890, and 2,377 in 1891. The deaths in the same years were 86 and 68 respectively, exclusive of deaths by execution. Thus 1 death occurred to every 31 cases of sickness in the former, and 1 in every 35 cases in the latter year.

Deaths in public institutions.

805. Altogether the number of deaths in penal or charitable institutions during 1890-91* was 2,758, being in the proportion of 1 to every 6.8 deaths which took place in Victoria during the year. The deaths in such institutions in the ten years ended with 1890 were in the proportion of 1 to every 6.4 deaths; and in the four years 1877-80, in that of 1 to every 6 deaths which took place in the whole colony. The following are the names of the institutions and the number of deaths which occurred in each during the year 1890-91:—

^{*} The figures relating to hospitals for the insane, industrial and reformatory schools, gaols, and penal establishments, are for the year ended 31st December, and those relating to the other institutions are for the year ended 30th June, 1891.

806. The administration of matters relating to Public Health in Department Victoria is now regulated by the Health Act 1890, consolidating of Public Health. previous Acts. Under this Act there has been since the 1st February, 1890, a Department of Public Health, with a Minister of Health and a Board of Public Health, consisting of the Chairman and Medical Inspector, who are appointed by the Government, and seven representative members, who are members of and elected by Municipal Councils, and who hold office for three years. The powers of the Board are very large. It may compel local councils to carry out most of the provisions of the Health Act which were previously optional, may make general regulations for the inspection of dairies, may provide hospital accommodation where councils are in default, may order the isolation of persons suffering from dangerous, infectious, or contagious diseases, may require councils to provide destructors, incinerators, etc., and to pass by-laws providing for the effective treatment of house refuse, nightsoil, etc., and for the prevention of the pollution of rivers, and may act as a court of appeal in regard to abattoirs and offensive trade establishments. The Board, which meets weekly either as a board or in committee, also administers the Cemetery Act, as well as the laws and regulations relating to vaccina-The local sanitary authorities are the various tion and quarantine. Municipal Councils, of which there are now 196. These councils are

^{*} Including the deaths of 25 infants born in the institution.

809. It will be noticed that in 1891, according to the observations observataken at the Melbourne Observatory, although the maximum tem- 1891 comperature was about  $1\frac{3}{4}$  degree below the average, the minimum temperature was  $3\frac{1}{2}$  degrees above, and the mean temperature was slightly above, the average; also that, whilst the mean atmospheric pressure was slightly above, and the rainfall was nearly 11 inch above the average, the mean amount of cloud was slightly below the average, and the number of wet days was 5 less than usual. The mean relative humidity, however, was above the average.

pared with

Observations in 1891 years compared.

810. During the period of twenty-eight years a higher temperature and former than the maximum of 1891 was experienced in all the years but eight, and a lower one than the minimum in every one of the previous years; moreover, the mean temperature was higher than in all but nine of the previous years; the days on which rain fell were fewer than in all the previous years except nine, although the amount of rainfall was higher than in all the years but ten.

Mean temperature in Melbourne and elsewhere.

811. The mean temperature of Melbourne over a series of years (57.4°) corresponds with that of Bathurst, a town in the interior of New South Wales, situated 2,150 feet above the sea-level, and is about equal to that of Washington (56.9°), Bordeaux (57.0°), Madrid (57.2°), and Marseilles (58.3°). It is higher by over 2 degrees than that of Hobart (55·1°), lower by  $5\frac{1}{3}$  degrees than that of Sydney (62.5°), and lower by  $7\frac{1}{3}$  degrees than that of Adelaide (64.6°).*

Mean rainfall in Melelsewhere.

812. The mean rainfall in Melbourne (25.5 in.) corresponds bourne and approximately with that of Ventnor in England, and Perth in Western Australia, Goulburn in New South Wales, and Toulouse in France. It is somewhat above that in London, Paris, or Berlin, is 2 inches above that in Hobart, is  $4\frac{1}{2}$  inches above that in Adelaide, but is little more than half as much as that in Sydney or Brisbane. The following is the average rainfall in some of the principal Australasian towns and in a few British and foreign towns:—

AVERAGE RAINFALL IN PRINCIPAL TOWNS. AUSTRALASIAN TOWNS.

Name of City or Town.	Days' Rain.	Rainfall.	Name of City or Town.	Days' Rain.	Rainfall.

Note.—The averages in this table, which in most cases refer to a long series of years, have been derived, for all the towns except Melbourne, Auckland, Dunedin, Wellington, and Ventnor, from a work entitled Results of Rain, River, and Evaporation Observations made in New South Wales, by H. C. Russell, C.M.G., Government Astronomer of that colony: Potter, Sydney, 1890.

813. An unusually heavy rainfall occurred in the vicinity of Flood in Melbourne during the month of July, 1891, especially on the 1891. 11th, 12th, and 13th, on which 3 days over  $5\frac{1}{4}$  inches were registered, resulting in a disastrous flood, which spread over the low-lying grounds of Melbourne and suburbs, chiefly along the course of the Yarra and Saltwater Rivers, and lasted for several days. Only on two previous instances have similarly destructive floods been recorded, one caused by a rainfall of 3.85 inches on the 15th and 16th of March, 1878; the other in December, 1863, when as much as 5½ inches were registered for the five days ended with the 17th of that month. On all of these occasions the height of the Melbourne floods was not regulated entirely by the local rainfall, but was largely dependent upon the amount of rain which fell in the ranges forming the watershed of the streams which discharge themselves at that city. The rainfall during the whole month of July, 1891, amounted to 7.02 inches, or as much as  $5\frac{1}{3}$  inches above the average of July during the previous 10 years, viz., 1.68 inches; and more than double the maximum of any previous July since records have been kept, viz., 3.16 inches in July, 1870. Except in October, 1869, and December, 1863, when 7.61 and 7.18 inches respectively were registered, the rainfall just mentioned was by far the greatest during any month in the last 33 years; the next greatest having been 6.47 inches in December, 1858, and 6.36 inches in March, 1878. The following are the particulars of the rainfall at the time of each of the three great floods referred to:—

RAINFALL AT TIME OF FLOODS AT MELBOURNE, 1891, 1878, AND 1863.

Mirrors of great telescope.

814. The Board of Visitors to the Melbourne Observatory, in their report dated 12th September, 1890,* state that since the receipt of communications from the maker of the great Melbourne telescope with reference to the expediency of erecting a refractor on the equatorial mounting of that instrument, they are now disposed to think it would be better to have a separate instrument, whenever funds can be spared for the purpose.† An interesting report by the Government Astronomer is appended to the Board's report, in which is described a new telescope recently received for stellar photography, to be used in connexion with the portion undertaken by Melbourne of the charting of the heavens in accordance with the plans adopted by a Congress recently held in Europe.

Meteorology elsewhere treated on.

815. An extended account of the meteorology and climate of Victoria will be found in the *Victorian Year-Book*, 1874, paragraphs 54 to 95.

^{*} Parliamentary Paper, No. 185, Session 1891.

[†] An interesting description of the Melbourne Observatory and of the great Melbourne telescope, by Mr. E. J. White, the then acting Government Astronomer, will be found in the Victorian Year-Book, 1874, page 231 et seq.

### PART V.—ACCUMULATION.

- 816. The coins in circulation in Victoria are in all respects the Coins and same as those used in the United Kingdom. The accounts are kept in sterling money (£ s. d.).
- 817. In dealing with moneys or money values taken from returns Foreign where foreign moneys have been quoted, such values, for the purpose of this work, have been converted into their British equivalents according to the scale adopted by the Imperial Board of Trade, which is given in the following table:—

# FOREIGN MONEYS AND BRITISH EQUIVALENTS.

Countries.			Foreign Moneys.		British Equivalents.

^{*} The Tael is not a coin, but a weight. The ideal tael should consist of sycee (pure) silver, and should weigh 583.2 grains. As a matter of fact, however, the weight as well as the purity of the tael varies in different localities. The weight of the Haikwan tael—which is that employed by the Chinese Government in collecting revenue—is about 580 grains, and the fineness about .9855. The value of the tael is regulated by the price of silver; that of the Haikwan tael has been as follows in the eight years prior to the year under notice:—1890, 5s. 3d.; 1889, 4s.  $8\frac{3}{4}$ d.; 1888, 4s.  $8\frac{3}{4}$ d.; 1887, 4s.  $10\frac{1}{4}$ d.; 1886, 5s.  $0\frac{1}{8}$ d.; 1885, 5s.  $3\frac{1}{2}$ d.; 1884, 5s. 7d.; 1883, 5s.  $7\frac{1}{4}$ d.

[†] An Egyptian pound is 100 piastres, or £1 0s. 10d.

[‡] The average value of the yen has been as follows in the years named:—1890, 3s. 3d.; 1889, 3s.  $0\frac{3}{4}$ d.; 1888, 3s.; 1887, 3s. 2d.; 1886, 3s. 6d.; 1885, 3s. 3d.; 1884 and 1883, 3s.  $7\frac{3}{4}$ d.

Coins in 818. The following is a statement of the metallic money which dominions. circulates in the various dominions of the British Empire:—

### METALLIC CURRENCY IN BRITISH DOMINIONS.‡

Countries.		Metallic Circulation.
Great Britain and Ireland Australasian Colonies (inclu Fiji) South African Colonies Falkland Islands	$\left\{ egin{array}{c} \mathbf{\pounds} \ \mathrm{s.} \end{array}  ight.$	d.
St. Helena Channel Islands	£ s.	d., and a special subsidiary copper coinage.
Malta	1	d., and a special $\frac{1}{3}$ farthing called a grain.
West African Settlements	i i	d., supplemented with other coins.
West Indian Colonies	Brit	ish silver and bronze. In some places accounts e kept in dollars at 4s. 2d.
Canada		ars at 4s. 1·31d.
Newfoundland	Doll	ars at 4s. 2d.
Gibraltar	Mix	ed British and Spanish coins.
Cyprus	Brit	ish, French, and Turkish gold; British silver, ad special bronze piastres.
India		ees, annas, and pies.

^{*} In making payments from the Imperial funds in places where the dollar is current, the valuation of the Mexican dollar is fixed by the Lords of Her Majesty's Treasury quarterly, according to the market price of silver. Upon this basis the price of the dollar was fixed at 3s. 5d. for the June, 3s. 2d. for the September, and 3s. 2d. for the December quarter of 1891; and at 3s. 2d. for the March, 3s. 1d. for the June, and 2s. 11d. for the September quarter of 1892. See 22nd Report of the Deputy Master of the Imperial Mint, page 32.

† The intrinsic value of the gold dollar (at par of exchange) is 4s.  $1\frac{5}{16}$ d.; 4.8665 being equivalent to £1. The silver dollar, although maintained by the United States at the same value as the gold dollar, was in 1890 intrinsically worth only 3s. 4d; it is 9 fine, and weighs  $412\frac{1}{2}$ grs. and contains, therefore,  $371\frac{1}{4}$ grs. of pure silver.

† The information in this table was obtained for the most part from a paper read before the Royal Colonial Institute, London, on the 11th February, 1890, by Mr. L. C. Probyn.

819. A branch of the Royal Mint was established in Melbourne in Royal Mint. 1872, and was opened to the public on the 12th June of that year. The premises occupy 2 acres 1 rood and 26 perches of land, valued in October, 1880, at £8,500, but now probably worth ten times that amount; the original cost of the buildings, machinery, fittings, and furniture was £68,350.†

820. From the time of the opening of the Mint to the end of 1891,  $_{\text{Gold}}$   $12\frac{2}{3}$  million ounces of gold were received thereat. In point of average at Mint. purity, the gold sent to the Mint is considerably above the standard (viz., 22 carats, worth £3 17s.  $10\frac{1}{2}$ d. per oz.), and thus the value of the whole quantity was rather over  $51\frac{1}{3}$  millions sterling, or almost exactly £4 per oz.‡ The following table shows the quantity and value of the gold received in each year:—

GOLD RECEIVED AT THE MELBOURNE MINT, 1872 TO 1891.

Year.		Quantity.	Value.	Year.		Quantity.	Value.
1872§		Oz. 190,765	£ 765,024	1883		Oz. 786,021	£ 3,159,609
1873		221,904	887,256	1884	,	945,709	3,803,320
1874		335,366	1,349,290	1885	• • •	836,433	3,351,767
1875		489,823	1,948,067	1886		756,611	3,029,783
1876		543,304	2,149,890	1887	• • •	770,222	3,075,487
1877	,	378,410	1,492,207	1888		757,813	3,023,414
1878		570,079	2,268,001	1889		761,931	3,030,958
1879		656,724	2,638,393	1890		752,923	3,003,635
1880		758,937	3,062,663	1891		805,231	3,208,352
1881		$692,\!425$	2,793,810				
1882		819,142	3,311,894	Total		12,829,773	51,352,820

^{*} See footnote (‡) on page 480. † See Amended Return to an order of the Legislative Assembly, Parliamentary Paper C.—No. 4*, Session 1880. ‡ See also paragraphs 821 and 829 post.

[§] From the 12th June, the day the Mint was opened to the public.

Gold received ounces.

821. A simple calculation, based upon the total value as shown in in standard the lowest line of the last column of the table, will show that the gold received amounted to 13,188,525 ounces standard, valued at £3 17s.  $10\frac{1}{2}$ d. per ounce, or 358,752 ounces more than the actual weight of gold received at the Mint.

Gold received, 1891.

822. It will be observed that the gold received at the Mint in 1891 was more by 52,308 ounces than the quantity in 1890 and was also more than in any other year since 1885.

Gold issued from Mint.

823. Gold is issued from the Mint as coin or as bullion. former, with the exception of 555,614 half-sovereigns, has consisted entirely of sovereigns. The following is a statement of the gold issued in each year, whether in the shape of coin or bullion :-

GOLD ISSUED AT MELBOURNE MINT, 1872 TO 1891.

Year.	C	oin.	Bulli	Total Value of Coin	
	Sovereigns.	Half-Sovereigns.	Quantity.	Value.	and Bullion.

Gold coin issued.

824. The difference in value between the gold coin issued from the Mint in 1890 and 1891 was £276,000, the excess being in favour of the latter. The gold coin issued in 1891 was less than that in 1888, 1887, 1886, 1885, 1884, or 1880; it was, however, in excess of that in any other year.

^{*} From the 12th June, the day the Mint was opened to the public.

825. Nearly all the gold issued in the form of bullion is in 10 oz. Gold bullion ingots, and goes to India. The amount is very irregular, and depends on the run of trade with India and on the exchange. The quantity so issued has fallen off very considerably since 1883, when its value amounted to over £1,100,000, or to 35 per cent. of the total value of coin and bullion issued; but in 1891, although much in excess of the average of the previous six years, it amounted to only £460,000, or something over 14 per cent. of the whole.

826. Nearly four-fifths of the gold received at the Mint since its victorian first establishment was raised in Victoria, and rather less than a gold seventh came from New Zealand. The bulk of the remainder was contributed by the other Australasian colonies—chiefly Tasmania and South Australia (Northern Territory)—and a very small quantity by Natal. The following were the quantities received from these countries respectively prior to and during 1891:—

827. Gold deposited at the Mint is subject to a charge of  $1\frac{1}{2}$ d. per Mint charges. ounce on the gross weight before melting if the deposit contains 1,000 ounces of standard gold or over; and of 2d. per ounce if the deposit contains less than 1,000 ounces—the minimum charge on any deposit being four shillings.

828. Any silver in a deposit in excess of 4 per cent. of the weight Mint allowof the deposit after melting is allowed for at a rate per ounce to be fixed from time to time by the Deputy Master. A reduction of a sixth of the charges is made on deposits containing more than 24 ounces of

† Including not quite 1 oz. from India.

^{*} Prior to the year 1890 all deposits of Light Gold Coin were included under "Unknown.",

unrefinable gold, or gold containing silver in less proportion than  $4\frac{1}{2}$ per cent., and base metal in less proportion than 2 per cent., of the weight of the deposit after melting.

Fineness of gold Mint.

829. Standard gold contains 91.667 per cent. (22 carats out of 24) received at of pure gold, but the gold (chiefly dust and bars) received at the Mint in 1891 contained as much as 94.4 per cent. of pure gold, and therefore it had to be considerably reduced in fineness to bring it to a fit state for converting into coin. The silver in the gold received in 1891 amounted to 4.2 per cent., and the base metals to 1.4 per cent. These proportions vary but little from year to year.

Weight and fineness of gold pieces coined, 1890 and 1891.

830. The standard weight of the sovereign is 25682 of an ounce (equal to 7.988 grammes, or 123.27447 grains troy), and the standard weight of the half-sovereign is 12841 of an ounce. The standard fineness of those pieces is 916.6667 parts (or  $\frac{1}{12}$ ) of pure gold in every In practice a small margin is allowed, and the actual fineness of the gold coins struck at the Melbourne Mint in 1891 was 916.70 as compared with 916.69 in the previous year.

Mint receipts and expenditure.

831. By the Victorian Mint Act (31 Vict. No. 307) it is provided that the sum of £20,000 shall be paid annually to the Mint from the Consolidated Revenue, the unexpended portion of the subsidies to be paid back to the Treasury. The following table shows the amount of such unexpended balances, also the receipts, expenditure, and cost of the Mint to the colony in each year from that in which the Mint was established to 1891:—

MINT REVENUE AND EXPENDITURE, 1872 TO 1891.

832. In the period to which the table relates, leaving the interest Excess of on the value of lands, buildings, and machinery out of account, the net cost of the Mint to the colony has averaged £5,558 per annum; during the ten years 1882-91 it averaged £4,513; and during the three years 1889-91, £3,708. The Mint authorities claim, however, that this loss is compensated many times over by the advance in the price of gold since the opening of the Mint, viz., from 76s. to 77s. 8½d. per oz., whereby the colony has gained during the last  $18\frac{1}{2}$  years close on £70,000 per annum.§

833. Prior to 1887, the expenditure of the Melbourne Mint Mint reexceeded its revenue by a much smaller proportion than the expendi- Melbourne, ture of the Sydney Mint exceeded its revenue; but in 1887 and London. subsequent years the business of the Sydney Mint—and consequently its revenue—was increased by large accessions of gold, chiefly from Mount Morgan in Queensland; and as the Mint expenditure did not increase in a corresponding ratio, the proportional excess of it over the Mint revenue considerably diminished, and in each of the five years ended with 1891 was lower than the Victorian proportion.

receipts.

^{*} The Mint subsidy in each year was £20,000, or £400,000 in 20 years.

[†] Exclusive of the cost of lands, buildings, and machinery. See paragraph 819 ante.

[‡] See paragraph 819 ante.

[§] See 21st Annual Report of the deputy master of the London Mint, Appendix H., page 109.

1891 the receipts of the Sydney exceeded those of the Melbourne Mint by £2,997, whilst the expenditure of the two Mints differed but slightly. In the London Mint, on account of the large profit made on the purchase of silver and bronze for coinage, the receipts in 1891 amounted to nearly three and a half times the expenditure, and it may be inferred that if Victoria and New South Wales were allowed the profit on the silver and bronze coinage used in the currency of the Australasian colonies, these establishments would become more than self-supporting institutions. The following is a statement of the revenue and expenditure, and difference between those items, in the three Mints during the past year:—

Melbourne, Sydney, and London Mints.—Revenue and Expenditure, 1891.

Note.—The plus sign (+) indicates that the receipts exceeded the expenditure.

Seignorage on silver coinage. 834. Although British silver coins are merely token money, and since 1816 have been limited as a legal tender to the sum of forty shillings, yet they were at first only slightly below their intrinsic value. For prior to 1873, standard silver (925 fine) was worth  $60\frac{7}{8}$ d. per oz.—on the then existing bi-metallic relation of  $15\frac{1}{2}$  parts of silver (by weight) to 1 part of gold, and as the nominal value of 1 oz. of standard silver is 66d. when coined, the difference—being profit or seignorage obtained by the Mint—was only 5d., or less than  $8\frac{1}{2}$  per cent. on the then market price of the metal. Ever since that period, however, the rate of seignorage has gradually increased with the fall in the price of silver. Starting with from 9 to  $9\frac{1}{2}$  per cent in the years 1870-2, it gradually rose, with some fluctuations, to  $17\frac{3}{4}$  per cent. in 1877, 36 per cent. in 1885, and 54 per cent. in 1889, although it fell back again to  $35\frac{1}{2}$  per cent. in 1890. In 1891 the average price of silver purchased

^{*} Receipts from the public only. The Government subsidy, amounting to £20,000 in Victoria, and £15,000 in New South Wales, is not included.

by the London Mint was  $45\frac{5}{16}$ d., and thus the seignorage was  $20\frac{11}{16}$ d., or at the rate of  $45\frac{1}{16}$ d. per cent. The total profit made by the Mint upon silver bullion purchased for coinage in the same year was £238,663; in addition to which there was a profit on bronze coinage of £82,227. As against this, however, there was a loss of £6,325 on the coinage of gold, and a loss of £24,258 on worn silver coin exchanged, of which £321 was effected at the Melbourne, and £326 at the Sydney Mint.

835. Prior to 1871 both gold and silver were used in unlimited Fall in quantities for the coinage of money in almost all the countries of the silver. world, except the United Kingdom, which has had a mono-metallic gold standard since 1816; and by this extended use of the two metals in bi-metallic relation, it so happened that an almost uniform ratio prevailed between the values of the two metals closely approximating to  $15\frac{1}{2}$  of silver to 1 of gold.* In 1871, however, Germany, followed by Sweden, Norway, and Denmark, broke the spell by adopting a gold standard, and ever since 1873, an almost continuous fall has taken place in the value of silver, whilst the ratio of value between the two metals has increased to over 20 to 1, the maximum reached being 22 to 1, in 1889. The causes which brought about this result have been the subject of much controversy; it is generally recognised, however, that although partly to be attributed to the increased production of silver, † it was much accelerated by the general scramble for gold which followed the demonetization of silver, and by the restriction or entire suspension of the free coinage of silver in silver-using countriesespecially in those comprised in the "Latin Union" (including France, Belgium, Greece, Italy, and Switzerland) and the United States which causes, moreover, tended to appreciate gold, and, as a consequence, to depreciate the gold prices of commodities. As fine gold is worth £4 4s. 11½d. per ounce, fine silver, as measured by the gold standard, would be worth, on the basis of the original ratio of 15½ to 1,  $65\frac{3}{4}$ d. per oz., and standard silver ('925 fine)  $60\frac{7}{8}$ d. per oz., which was actually the average which prevailed during the ten years 1861-70. Starting with this level, the gradual decline in the price of silver may be traced by the following quotations of the average price on the London market from 1861-70 to the present time:—

^{*} This proportion is still adhered to in the Latin Union, whilst in the United States the proportion of 16 to 1 is maintained. † In the decade 1851-60 the annual production averaged  $4\frac{1}{2}$  silver to 1 of gold; in 1861-70,  $6\frac{1}{2}$  to 1; in 1871-80, 13 to 1; and in 1881-90,  $18\frac{3}{4}$  to 1.

AVERAGE PRICE OF STANDARD SILVER ('925 FINE) IN THE LONDON MARKET, 1861 TO 1891.

Year.	Price per Ounce Standard.	Year.	Price per Ounce Standard	
N. A.	d.			d.
Average 10 years* \	$60\frac{7}{8}$	1881	•••	$51\frac{3}{4}$
1861 to 1870 )		$1882\dots$		$51\frac{1}{1}\frac{3}{6}$
1871	$60\frac{9}{16}$	188 <b>3</b>	• • •	$50\frac{9}{16}$
1872	$60\frac{1}{4}$	$1884\dots$		$50\frac{11}{16}$
1873	59\frac{1}{4}	$1885 \dots$		$48\frac{5}{8}$
1874	$58\frac{5}{16}$	$1886\dots$	• • •	$45\frac{3}{8}$
1875	$56\frac{13}{16}$	1887		445
1876	53	1888		$42\frac{7}{8}$
1877	$54\frac{3}{4}$	$1889\dots$		$42\frac{1}{16}$
1878	$52\frac{1}{16}$	$1890 \dots$		$47\frac{1}{3}$
1879	$51\frac{\frac{10}{3}}{16}$	1891		$45\frac{1}{16}$
1880	$52\frac{1}{4}^{16}$			18

Note.—These quotations were taken from the Annual Reports of the Deputy Master of the Royal Mint, England. The price of silver in the United States appears to closely correspond with that in London; as the average price of fine bar silver at New York in 1890 was \$1.0533, equivalent, at par of exchange, to a small fraction above 48d. per oz. (British) standard; whilst the price paid by the United States Mint, during 1890-91, averaged \$1.0475 per fine oz., being equivalent to  $47\frac{3}{4}$ d. per oz. standard.

Effect of silver coinage.

836. In order to indicate the serious effect of this fall on the fall of price of the silver coinage in the various silver-using countries of the world—notably India and the United States—the following table, extracted from the Report of the Director of the U.S. Mint for 1891, has been selected, which shows the commercial value of the American silver dollar for each year since 1873, when it was slightly above par. With exchange at par, the silver dollar is nominally worth  $\mathcal{L}_{\frac{1}{4\cdot8665}}$ , or 4s.  $1\frac{5}{16}$ d.; it weighs  $412\frac{1}{2}$  grains, and is of the decimal fineness of '9 (i.e., it consists of nine-tenths pure silver and one part alloy).

Bullion Value of the Silver Dollar, 1873-1890.

^{*} During this period the extreme average prices were  $60\frac{1}{2}$ d. in years 1868-69-70 and  $61\frac{1}{2}$ d. in 1863.

837. With a view of raising the price, and thus paving the way for Drastic the free coinage of silver, the United States Government has for some adopted by the United States of the Legislature, been buying States in up largely, and coining certain fixed quantities of silver bullion—the produce of mines of the United States; and in August, 1890, a new law came into force requiring the purchase of as much as 4,500,000 ozs. (U.S.) standard silver per month. The result was that, during the fiscal year 1890-91, the United States Treasury bought up under that and a previous law 56,878,325 standard ounces, and paid therefor \$53,626,925, being at the average rate of \$1.0475 per fine ounce (or  $47\frac{3}{4}$ d. per ounce British standard). Owing, however, to the increased stimulus given to silver production by this action, the object aimed at failed, and although the price was temporarily raised, it subsequently fell lower than it had ever been previously.*

838. As far back as February, 1873, a memorial from representa- Proposition tives of ten banks doing business in Melbourne was forwarded to the silver in then Governor (Lord Canterbury) setting forth the inconvenience entailed upon the public by the scarcity of silver coin circulating in the colonies, and praying His Excellency to petition Her Majesty to authorize the manufacture and issue of silver coin by the Melbourne This memorial was strongly supported by the then Treasurer, and was duly forwarded to the Colonial Office. Some correspondence ensued, and objections were raised. The Lords Commissioners of the Treasury represented that the nominal value of silver tokens exceeded the intrinsic value, and that the privilege of issuing implied the duty of withdrawing the tokens at their full nominal value. On this point the question was complicated. They further were of opinion that the coins should be distinct in character from those of the United Kingdom, in order that the British Government might not be called upon to withdraw, when worn, silver not issued from the Royal Mint; and that an adequate safeguard would have to be secured against the temptation to over-issue silver coinage. The then Deputy Master of the Melbourne Mint pointed out, moreover, that, as but little silver was at that time produced in the colonies, it would be necessary to import what silver was required for coining, and consequently little or no profit would result. It was, therefore, decidedto proceed no further in the matter. Subsequently, silver mines of great richness having been discovered in Australia, the question was revived in 1890 by the then Treasurer (Mr. D. Gillies), and, in July,

Melbourne.

^{*} On 9th February, 1892, the price of standard silver in London fell to 41d., which was the lowest on record. See London Banker's Magazine for March, 1892, page 387.

1891, the subject was brought under the notice of the present Governor (Lord Hopetoun) by the successor to Mr. Gillies (Mr. J. Munro), who pointed out that, whilst the Imperial Government made an average profit of £11,000 per annum by coining the silver supplied to this colony, the Victorian Government lost on an average £5,000 per annum by coining gold. The Treasurer also showed how the objections previously raised might, in his opinion, be met, and suggested that the matter should be again brought to the notice of the Secretary of State for the colonies, with the view of its being again considered by Her Majesty's Government. The matter is at present the subject of negotiations between the Agent-General and the Imperial Government.

Sydney Mint, 1855 to 1891. 839. The Sydney Branch of the Royal Mint was established in 1855, and from that date to the end of 1891, 18,705,258 ounces* of gold were received thereat, of which it is believed that 7,558,816 ounces, or about two-fifths, were raised in the colony of New South Wales; 7,106,131 ounces, or nearly two-fifths, in Queensland; 2,249,940 ounces, or about an eighth, in New Zealand; and 1,442,306 ounces, or about a twelfth, in Victoria. In the same period, 64,701,500 sovereigns, 4,995,000 half-sovereigns, and 734,244 ounces of bullion (valued at £2,942,468), were issued from this branch, the whole being valued at £70,141,468. It should be mentioned that since the establishment of the Melbourne Mint only about 4,954 ounces of Victorian gold have been coined in Sydney.

Sydney Mint, 1891. 840. The quantity of gold received at the Sydney Mint during 1891 was 787,225† ounces, valued at £2,818,002, about seven-tenths of which was produced in Queensland, about one-sixth in New South Wales, about one-ninth in New Zealand, but only a very small quantity in the other colonies. The total value of coin and bullion issued in that year amounted to £2,766,424, consisting of £2,673,000 sovereigns, 154,000 half-sovereigns, and 23,128 ounces of gold bullion valued at £93,424. The value of coin and bullion issued from the Sydney Mint was less by about £77,000 in 1890, and by nearly half a million in 1891 than that issued from the Melbourne Mint in those years.

London Mint, 1891. 841. No other metal than gold is coined at the Melbourne and Sydney Mints, the silver and bronze coinage required by the colonies being obtained from England. Besides gold, silver, and bronze

^{*} Including 243,018 ounces of coin.

[†] Including 4,421 ounces of coin.

British money, silver, nickel, and bronze coins of various denominations are struck at the Royal Mint, London, for several of Her Majesty's possessions. The following table shows the number and value of coins of thirty-two different denominations issued from that Mint in 1891:—

842. According to the table, the silver coined at the London Mint silver coined in 1891 represented an aggregate nominal value of £1,344,924, which Mint, 1891. was less by £414,949 than that coined in 1890, but was slightly above the average of the last ten years.

Gold coined at London Mint, 1872 to 1891. 843. In 1891, gold to the value of over £6,869,000 was coined at the London Mint, which, although less than in the two preceding years, was much more than in any other years since 1872. No sovereigns were struck at the London Mint in 1881, 1882,* 1883, or 1886, and no half-sovereigns in the first two and last of those years, or in 1888 or 1889. The following is the nominal value of the gold coins struck thereat during the last 20 years:—

Nominal Value of Gold Coins Struck at the London Mint, 1872 to 1891.

Value of
Australian
Mints to
the Empire.

844. It has been pointed out that, although of late years the productive power of the London Mint has been so much extended that it could easily coin gold enough for all wants in addition to the other coinage, it was not always so; and the Australian Mints have been of great, though unacknowledged, value to the Empire during some years when the London Mint could coin little or no gold.

Gold coins in the United Kingdom. 845. A few years ago, it was estimated that 80,000,000 sovereigns, and 45,000,000 half-sovereigns, of anominal value in all of £102,500,000, were circulating in the United Kingdom, and that about half these were light. The Mint authorities stated that, exclusive of the expense of re-coinage, it would cost £804,390 to make good the deficient weight.

Pre-Victorian gold coins called in. 846. In 1889 light gold coins to the value of £603,531 were received at the London Mint, and were paid for according to weight; and subsequently, under the *Coinage Act* 1889, on the calling in of all

^{*} The non-coinage of gold in London during 1881-2 was chiefly due to the Mint at Tower-hill being partly re-built, and wholly re-arranged, with new machinery to replace the old.

gold coins issued prior to the reign of Her present Majesty-(allowing at their full nominal value for those which had become light by fair wear and tear, and were not more than 4 grains below the standard weight)—gold coins to the value of £2,463,148 (of which £45,671 was the value of withdrawals from Australia and the Cape) were received up to the 28th February, 1891, after which date they ceased to be legal tender in the United Kingdom. The deficiency in weight and standard of the whole of the pre-Victorian coins received amounted to a value of £51,300. To this has to be added the cost of re-coinage. Since the 28th February, 1891, it is estimated that pre-Victorian gold coins, of a nominal value of £25,000, were received at the Bank of England, and paid for according to weight.

847. All the pre-Victorian coin having been called in, steps were Light gold taken to restore the coinage of the current reign, and with this view the Coinage Act 1891 was passed on similar lines to the Act of 1889. This Act provides that gold coins of the realm which had not been called in by proclamation, and were below the least current weight (122.5 grains for the sovereign and 61.125 for the half-sovereign), as provided by the Coinage Act 1870, but which had become light by fair wear and tear, and were not more than 3 grains below the standard weight (123.274 grains for the sovereign and 61.637 for the halfsovereign), might be received and paid for at their nominal value;* the sum of £400,000 to be set aside to meet expenses to be incurred in effecting this object. An Order in Council was subsequently issued declaring that such coins would be received at the Bank of England at any time after the 17th March, 1892. The sum received up to the 30th April of the same year was £4,500,000, consisting of £2,500,000 in sovereigns, and £2,000,000 in half-sovereigns.

848. It may be mentioned that, according to experiments made by Loss of the late Professor Stanley Jevons, the sovereign when in circulation loses ·043 grain, and the half-sovereign ·069 grain per annum. According to this rate of wear, a sovereign would become light after 18 years, and a half-sovereign after  $7\frac{1}{2}$  years of circulation; but, owing to certain peculiarities of the half-sovereign circulation, Mr. Jevons preferred to adopt ten years as the average "legal life" of that coin,

weight of gold coins by circula-

^{*} The deficiency permissible below the standard was thus raised from '774 grain for the sovereign, and 512 grain for the half-sovereign, under the Act of 1870, to 3 grains for either coin.

which would make the annual wear '051 grain. Mr. J. B. Martin, who read a paper on the subject before the London Institute of Bankers in 1882, estimated the annual wear of the sovereign at '04325 grain, thus confirming Mr. Jevons' figure. His experiments on the half-sovereign, however, gave the rate of wear as '04379 grain, or rather less than Mr. Jevons' estimate. An inquiry made by the London Mint in the early part of 1888 showed an annual rate of wear for sovereigns of '03956 grain, and for half-sovereigns of '05511 grain, which would give a legal life for sovereigns of  $19\frac{1}{2}$  years, and for half-sovereigns of 9 years.*

Currency system of United Kingdom.

- 849. The subjoined particulars of the currency system of the United Kingdom has been abstracted from a statement submitted by the Right Honorable G. J. Goschen to a monetary conference held in Paris in 1878†:—
  - "Gold is the only standard metal.
  - "The silver coinage is a legal tender to the amount of 40 shillings only."
  - "The bronze coinage is legal tender to the amount of one shilling.
  - "The gold coined is 917 fine, i.e.,  $\frac{1}{12}$  pure gold, and  $\frac{1}{12}$  alloy.
- "The sovereign, representing the pound sterling, contains 113.001 grains of pure gold, or 123.27447 grains of standard gold. The half-sovereign precisely half of the above.
- "Sovereigns and half-sovereigns are legal tender to any amount, provided that the pieces be not worn below 122.5 and 61.125 grains respectively.
- "Below these weights they may be refused, and the Bank of England cuts all such light coins tendered to it, and receives them only as so much standard gold. The loss on light gold is thus borne by the public. Special arrangements have, however, been made under which the State will bear the loss on light pre-Victorian gold coins presented up to a certain date.
- "Every person is entitled to bring gold to the Mint for coinage, and to receive it back, in his turn, cut into coins, stamped with the proper die, as a certificate of due weight and fineness, at the rate of £3 17s.  $10\frac{1}{2}$ d. per ounce troy of standard gold—that is to say, 1,869 sovereigns for 40 lbs. troy of standard gold.
- "If the gold so brought to the Mint is higher or lower than the standard, the Mint adds alloy or fine gold for the account of the owner, according as it is needed, to bring it down to the standard or to bring it up.
- "The Bank of England is by law obliged to receive all gold brought to it by the public, paying for it immediately at the rate of £3 17s. 9d. per ounce standard.
- "The silver to be coined is '925, or  $\frac{37}{40}$  fine, and one troy pound, costing about 45 shillings at the present market price, is coined into 66 shillings, a sum fixed when the price was nominally about 60 shillings.
- "One pound avoirdupois of bronze is coined into 48 pence. The same quantity is coined in 80 halfpence or into 160 farthings. Thus, two halfpence, or four farthings, weigh more than one penny.

^{*} See London Mint Report 1889, page 96.

[†] See also last issue of the Victorian Year-Book, Vol. I., paragraph 751.

"It will be seen that, beyond the cost of making the subsidiary coins, a considerable seigniorage is charged on both silver and copper, which contributes towards the cost of coining the sovereign, and of replacing the silver coinage which is withdrawn from circulation as soon as any pieces are so worn by use that neither effigy nor legend are distinguishable."

850. Besides supplying the silver and bronze coinage required for Silver and circulation in the Australasian colonies, as already stated, the London Mint also withdraws silver coin from the colonies after it has become worn or defaced, allowing for the same at its full nominal value. The following are the values of the coin supplied and withdrawn in the last thirteen years:—

bronze coin supplied and withdrawn.

Coinage in Australia and other countries.

852. The figures in the table show that the value of the gold coin issued from the Australian Mints in 1890 was less by £2,705,000 than that issued from the Mint of Great Britain; but more by

^{*} Calendar years, except for India and Mexico.

gold coin.

£817,500 than that issued from the Mint of the United States, more by £555,000 than that issued from the Mint of Russia, more by £116,000 than that issued from the Mint of Germany, and considerably more than that issued from the mints of any of the other countries named. It will moreover be noticed that the nominal value of silver coinage in 1890 was greater than that of gold; and that over four-fifths of the whole silver coinage was coined by India, the United States, and Mexico.

853. Since the establishment of the Melbourne Mint in 1872, the Exports of value of gold coin exported from Victoria (£41,000,613), less the value of that imported (£3,070,673), has amounted to £37,929,940, or less by £7,983,408 than the total value of such coin issued from the Mint. In 1891 the value of the gold coin exported amounted to £2,217,734, or less by £5,331 than in the previous year; and the value of that imported was £325,562, or £289,280 more than in the The destination and value of the exports of gold coin previous year. in that year were as follow:—

Note.—This table, less the figures for 1891, was published in the last issue of the *Victorian Year-Book*. With reference to it, Mr. James Anderson, the Deputy-Master of the Mint at Melbourne, has made the following remarks:—"This table has been used in other quarters to show of how little value the Colonial Mints are to England, and in that point of view it is utterly unfair. England is not the whole Empire, and whether Colonial coin goes to the Bank of England or to India, or to any colony that has no Mint of its own, it is equally for the service of the Empire more than for the colony that coins it, though that colony bears the cost of coinage."

Proportion of Australian coinage sent to Bank of England.

855. It will be noticed that the value of the Australian gold coinage which found its way to the Bank of England in 1891 was much larger than in any previous year, and in consequence the amount of their own coin retained by the colonies was considerably below the average. Thus the value of gold coin retained in 1891 was only £1,644,000, or only 30 per cent. of that coined, as compared with nearly 4 millions sterling, or 74 per cent., in 1890; an average of over 3 millions per annum, or 59 per cent., in the five years 1886–90, and of nearly 2 millions, or 48 per cent., in the five years 1881–85; whilst the proportion in the whole period of seventeen years was 46 per cent. The large proportion of coin retained in the years 1886–90 was due to the large and continuous remittances of British money to Australia during that period on account of public and private borrowings, as

^{*} The minus sign (-) indicates that the value of Australian Gold Coinage received at the Bank of England exceeded that struck in the year by the amount against which it is placed.
† Net figures.

well as on account of British investments, the public debt of Australia and Tasmania alone having increased by  $41\frac{3}{4}$  millions.

856. At the end of 1885, Herr Soetbeer, a distinguished German value of economist, estimated that, in the civilized countries of the world, are circulating gold coins to the value of 669 millions sterling, and silver coins to the value of 393 millions sterling, or 1,062 millions in all. Of these values, about  $12\frac{1}{2}$  per cent., viz.,  $16\frac{2}{3}$  per cent. of the gold and  $5\frac{1}{2}$  per cent. of the silver, circulated in the United Kingdom.* The following later estimates for some of the countries—together with the amount of uncovered paper money in circulation—has been taken from the Report of the Director of the United States Mint for 1891 :—

ESTIMATED STOCK OF GOLD AND SILVER AND UNCOVERED PAPER Money in certain Countries, 1891 (000's omitted).

Note.—The dollars in the original table have been reduced to their equivalent in pounds sterling.

857. Herr Soetbeer estimates that the gold used annually in arts Quantity and manufactures by the civilized nations of the world amounts to 3,298,590 ozs., and the silver so used to 19,289,200 ozs. The value of in arts, etc. the gold at £4 per oz. would be £13,194,360, or at £3 15s. per oz. to £12,369,712; and the value of the silver at 4s. per oz. would be £3,857,840, or at 3s. 6d. per oz. to £3,375,610.*

of gold and silver used

^{*} For tables showing Herr Soetbeer's estimate of the amount of gold and silver coin, and of the gold and silver used in arts, etc., in different countries, see Victorian Year-Book 1889-90, Vol. I., paragraphs 833 and 836.

Silver sold from Melbourne Mint. 858. Fine silver sold by the Melbourne Mint in 1891 to silversmiths and others amounted to 23,369½ ozs., as against 41,279 ozs. in 1890, and 17,955 ozs. in 1889. At the end of 1891, 14,461 ozs. remained in store at the Mint. *

Number of banks.

859. During 1891 there were 17† banks of issue in Victoria, possessing therein 510 branches or agencies. There were only 11 banks of issue in the colony both in 1886 and 1881.

Liabilities, assets, etc., of banks.

860. The position of the banks as regards liabilities, assets, capital, and profits, according to the sworn returns for the last quarter of the three years just named, was as follows:—

FINANCIAL Position of Banks, 1881, 1886, and 1891.

	1881.	1886.	1891.

^{*} See London Mint Report, 1891, page 124.

[†] Two of these did not issue notes in 1891, and one closed its doors before the end of the year.

[‡] Including Government deposits, the amount of which was not returned in 1881, but in 1886 consisted of £98,293 not bearing interest, and £1,925,394 bearing interest; and in 1891 of £172,427 not bearing interest, and £616,594 bearing interest.

[§] Including notes, bills of exchange, and all stock and funded debts of every description, except notes, bills, and balances due to the banks from other banks.

861. It will be observed that the shareholders' capital (including Liabilities, reserves) amounted in 1891 to nearly  $20\frac{1}{2}$  millions, having increased compared at three by £8,640,000, or by nearly three-fourths, since 1881. The total periods. liabilities show an increase of  $19\frac{1}{3}$  millions—or 84 per cent.—since 1881, or of more than 9 millions—or 28 per cent.—since 1886; whilst the total assets increased by  $36\frac{1}{2}$  millions—or 135 per cent. since 1881, and by  $22\frac{1}{2}$  millions—or 55 per cent.—since 1886. expansion in banking business has been greater than that of the population, which, during the ten years ended with 1891, increased by only 31 per cent. Of the liabilities, the notes and bills in circulation have increased only 8 per cent. since 1881, and  $2\frac{1}{2}$  per cent. since 1886, the former being restricted by a Government tax and other charges, which are said to average as much as  $3\frac{1}{2}$  per cent.* The deposits, which now compose 96 per cent. of the total liabilities, have increased by over  $19\frac{1}{4}$  millions in the last ten, and by more than 9 millions in the last five years, and now amount to nearly  $40\frac{1}{2}$  millions. Under the head of assets it will be noticed that in 1891 the banks had  $7\frac{1}{8}$  millions sterling in coin and bullion—which was slightly less (£59,000) than in 1890, but £590,000 more than in 1889†, nearly  $2\frac{1}{3}$  millions more than in 1886, and considerably more than twice as much as in 1881; the landed property also represented nearly  $2\frac{1}{5}$  millions sterling, showing an increase of over £963,000 since 1886, or of £1,284,000 since 1881; but the most important item of all, the advances (debts due to the banks), which embrace 84 per cent. of the total assets, shows a marked advance in recent years, for since 1881 they have increased by nearly 31 millions, and since 1886 by more than 19 millions; and in 1891 they amounted to  $53\frac{3}{4}$ millions sterling.‡ It will be observed that in 1891 the advances exceeded the deposits by  $13\frac{1}{3}$  millions, as against an excess of but  $3\frac{1}{3}$  millions in 1886, and only  $1\frac{2}{3}$  million in 1881. The average rate of the last dividend declared in 1891 (£12 2s. 9d. per £100) was about the same as at the middle period, but much higher than at the first period. This dividend, it may be remarked, varied in different banks in 1891 from 5 to  $17\frac{1}{2}$  per cent.

862. The following table shows the proportion of each item of the Percentage liabilities to the total liabilities, and of each item of the assets to the total assets, of the banks at the same periods:-

and assets.

^{*} Including a tax on bank notes of 2 per cent. per annum payable to the general revenue. See Australasian Insurance and Banking Record for May, 1884, p. 191; McCarron, Bird & Co., 479 Collins-street.

[†] See paragraph 865 post.

Analysis of bank returns.

863. The following results are arrived at by analyzing the bank returns at the three periods:—

The liabilities amounted to	$\begin{cases} 84.28 \\ 80.36 \\ 66.29 \end{cases}$	per cent. of t	he assets in	1881 1886 1891
Coin and bullion formed	$\begin{cases} 11.07 \\ 11.98 \\ 11.18 \end{cases}$	per cent. of	the assets in	1881 1886
The paid-up capital was equal to	$\begin{cases} 33.65 \\ 23.24 \\ 21.29 \\ 39.92 \\ 28.92 \\ 32.11 \end{cases}$	per cent. of  per cent. of th  n	the assets in  ,, e liabilities in ,, ,,	1881 1886 1891 1881 1886 1891
Of the moneys deposited	$\begin{cases} 64.89 \\ 76.82 \\ 75.52 \end{cases}$	per cent. bore	e interest in ","	1881 1886 1891

Former periods and 1891 compared.

864. It will be observed that in 1891 the liabilities bore a much lower proportion to the assets than in 1886 or 1881; that coin and bullion bore a slightly larger proportion to the assets than in 1881 but a smaller proportion than in 1886; that the paid-up capital, which was formerly equal to over one-third of the assets, or two-fifths of the liabilities, was, in 1891, equal to a little more than one-fifth of the assets and not quite a third of the liabilities; and that of the moneys deposited a slightly smaller proportion bore interest at the last period than in 1886, but a much larger proportion than in 1881.

865. The coin and bullion held by the banks, which had been fast coin and increasing since 1885, fell off slightly in 1891 as compared with the banks. previous year; only in 1890 and 1891, however, did the amount exceed 7 millions sterling. The following figures show the value of coin and bullion held by the Victorian banks in the last quarter of 1891, and of each of the previous fifteen years:—

Coin and Bullion held by Banks, 1876 to 1891.

(Average of the last quarter of each year.)

			${f \pounds}$				${f \pounds}$
1876	•••		3,519,377	1884	• • •		5,014,749
1877	• • •		2,438,657	1885		• • •	4,230,618
1878			2,387,972	1886	• • •	• • •	4,932,940
1879	* * *		3,475,345	1887			6,838,719
1880		•••	3,854,635	1888			5,604,097
1881			3,008,491	1889			6,533,037

1883	• • •		$3,\!245,\!472$	1891			7,124,497

866. In all the years the bank advances exceeded the moneys on Deposits and deposit. The maximum of excess, viz., over  $13\frac{1}{3}$  millions, was reached banks. in 1891; the next largest excesses being close on 11 millions in 1890, 10 millions in 1889, and  $7\frac{3}{4}$  millions in 1888. In no other previous years except 1877 and 1878 did the excess exceed  $4\frac{1}{2}$  millions. The enormous increases in the last four years were brought about by the large speculations, chiefly in land, which received a sudden check about the latter part of 1888. The great commercial depression of 1879-80 is indicated by the restriction of advances in 1880, when the excess was as low as £66,000. The chief periods of inflation, as indicated by the advances during the last 16 years, were the four years 1876 to 1879 and 1888 to 1891 respectively, as is shown by the figures in the following table:—

Deposits in and Advances by Banks, 1876 to 1891. (Average of the last quarter of each year.)

		Deposits.	. 7	Excess of Advances over Deposits.	
Year.	Government.* Other.		Total.

Banks and Currency Statute 1887. 867. By The Banks and Currency Statute 1887 (52 Vict., No. 1002),‡ passed on the 22nd December, 1888, it was provided that bank notes issued in Victoria should be a first charge on the assets in Victoria in the case of insolvency or bankruptcy; that banks issuing notes must have a subscribed capital of at least £250,000, and a paid-up capital of £125,000; and that the banks may advance or lend money on the security of lands, houses, ships, or pledges of merchandise. The provisions of the Banking Statute were, moreover, extended so as to apply to every foreign banking company, firm, or individual banker trading in Victoria engaged in the ordinary business of banking by receiving deposits and issuing in Victoria or elsewhere bills or notes payable to the bearer at sight or on demand; whilst banks publishing misleading advertisements as to their capital were made liable to certain penalties.

Rates of exchange.

868. Subjoined are the average rates of exchange for bank bills drawn on the following places in 1891, and in the first year of each of the two previous quinquennia. Those upon London are drawn at sixty days' sight, and those upon the neighbouring colonies at sight:—

RATES OF EXCHANGE, 1881, 1886, AND 1891.

Places on which	Average Rates of Exchange.					
Bills were drawn.	1881.	1886.	1891.

872. The rate of interest allowed on moneys deposited with the Rate of principal Victorian banks for a period of 12 months stood at 4 per cent. during the first two and a half months of 1891, and at 5 per cent. during the remainder of the year. It may be mentioned that the rate on deposits for 6 months is usually 1 per cent. lower than that for 12 months, and the rate for three months 1 per cent. lower than that for 6 months. No interest is allowed by the leading Banks on deposits at call.†

interest on bank deposits,

^{*} Waterlow and Sons Limited, London Wall, London.

[†] One or two of the smaller banks allow from ½ to 1 per cent. above the rates quoted, and allow also interest on current accounts and deposits at call.

Fluctuation in rate of deposits,

873. In 1887 and the first nine months of 1888 extensive speculainterest on tions took place in land, mining, and other securities, but these, 1880 to 1892. which had no doubt been partly induced by the cheapness of money only 4 per cent. being allowed by the banks on deposits for 12 months —were suddenly checked in October of the latter year by the rate being raised to 5 per cent. The 4 per cent. rate lasted for 14 months, that being the first period since 1882 in which the rate had been below 5 per cent. For the succeeding twenty months the rate stood firm at 5 per cent.; being followed by a 4, and then, in March 1891, by a 5 per cent. rate, which continued during the remainder of 1891 and up to April 1892, when it was lowered to  $4\frac{1}{2}$  per cent. to the Australasian Insurance and Banking Record, the following are the periods at which the changes in the rate of interest allowed by the banks on deposits are reported to have taken place since August, 1880 : --

876. The particulars contained in the following table respecting Banks in the assets and liabilities of the banks in each of the Australasian colonies at the end of the first quarter of the present year have, in 1892. the absence of official information, been taken from the Australasian Insurance and Banking Record. † The care habitually exercised by the proprietors and writers of this publication to procure accurate information, and state it correctly, leaves no reason for doubt as to the substantial reliability of the figures:—

Banks in Australasian Colonies, 1892. (Compiled from the Averages of the Quarter ended 31st March, 1892.)

	of			Liabilit	ies.	
Colony.	Number o Banks.	Notes in Circulation.	Bills in Circula- tion.	Balances due to other Banks.	Deposits.‡	Total.
		${\mathfrak L}$	£	£	£	£
Victoria	158	1,351,799	129,919	178,381	39,928,901	41,589,000

Liabilities
and assets
in Victoria
and New
South
Wales
compared.

877. It will be noticed that both the bank liabilities and the bank assets are smaller in New South Wales than in Victoria, notwith-standing the fact that in New South Wales the bank assets include the large amount of £2,765,217 as due from other banks, which, in addition to sums due from independent institutions, is said to embrace capital lent to their own branches outside the colony, the latter being an item which is not considered as forming part of the assets of the banks in the other colonies.

Proportion of liabilities to assets in Australasian banks.

878. In Tasmania the assets of the banks only slightly exceed the liabilities, but in all the other colonies they are considerably in excess. In Victoria the liabilities amount to 65 per cent. of the assets, which is a higher proportion than obtains in Queensland or Western Australia, but a much lower one than in any of the other colonies. The following are the positions of the colonies in respect to the proportion the bank liabilities bear to the bank assets, the colony in which the former are least in proportion to the latter being placed first and the rest in succession, the figures showing the percentage of liabilities to assets being placed against each colony:—

^{*} Including Government securities, which in New South Wales amounted to £1,152,990, in Queensland to £33,110, in South Australia to £240,700, in Western Australia to £7,500, in Tasmania to £136,232, and in New Zealand to £100,801. If any Government securities were held by the Victorian banks, they were not distinguished in the returns.

[†] This amount probably includes capital lent by the New South Wales banks to their own branches outside the colony.

#### Proportion of Liabilities to Assets of Banks of Australasian Colonies, 31st March, 1892.

•	Per Cent.		Per Cent.
1. Queensland	51.61	5. South Australia	$79.68$
2. Western Australia	62.47	6. New Zealand	83.89
3. Victoria	65.14	7. Tasmania	94.84
4. New South Wales	71·29		

879. Coin and bullion in 1892 bore a higher proportion to the Proportion total assets of the banks in Victoria than they did to those in Queensland and New South Wales, but a lower proportion than that borne in the other colonies. The following is the order of the colonies in reference to this matter about the beginning of 1892:—

of specie to assets of Australasian banks.

liabilities of Austral-

asian banks.

#### Proportion of Coin and Bullion to Assets of Banks in Australasian Colonies, 31st March, 1892.

		Per Cent.				Per Cent.

2. Tasmania		16.28		6.	Queensland	9.93
3. South Australia		15.51		7.	New South Wales	 9.28
4. New Zealand		13.84				•

880. In his evidence before a Royal Commission on banking laws Proportion appointed in February, 1887,* Mr. J. F. McMullen, a Victorian banker of great experience, and at the time general manager of the Union Bank of Australia, gave it as his opinion that every bank ought to possess a metallic reserve equal to three shillings in the pound (15 per cent.) of its liabilities. By the following figures it is shown that on the 31st March, 1892, this proportion was exceeded in all the Australasian colonies, except New South Wales, where it was 2 per cent. lower than the proportion referred to; also that the average for the whole of Australasia was  $16\frac{1}{2}$  per cent., or nearly 3s. 4d. in the pound:—

Proportion of Coin and Bullion to Liabilities of Banks IN AUSTRALASIAN COLONIES, 31st March, 1892.

	Per Cent.		Per Cent.

Queensland	2,722,050	7,140,171	27.60	72.40
South Australia	1,865,831	6,005,725	23.70	76.30
Western Australia	561,226	874,996	39.08	60.92
New Zealand	3,712,937	9,503,344	28.09	71.91

Proportion of interest posits in Australasian banks.

882. It will be seen that between seven-tenths and three-fourths of bearing de- the bank deposits are interest-bearing in all the colonies except Western Australia, in which only three-fifths of the deposits bear interest.

British deposits in Australasian banks.

883. It is stated on the authority of the Australasian Insurance and Banking Record t that if the deposits held in the colonies, as shown by the quarterly average statements of the banks, be deducted from the total deposits shown in the bank balance sheets, the difference approximately indicates the amount received from British depositors. If this be correct, the British deposits in Australasian banks amounted to nearly 36 millions in March, 1890, to nearly 40 millions in March, 1891, and to over 43 millions in March, 1892, the increase in the last twelve months being over  $3\frac{1}{2}$  millions, and that in the last two years about  $7\frac{1}{2}$  millions sterling. This is made plain by the following figures:—

#### British Deposits in Australasian Banks, 1890 to 1892.

Deposits in Australasian Banks.	On the 31st March—				
Deposits in Australasian Danks.	1890.	1891.	1892.

	·	

Average Dividend, £11 10s. 2d. per cent. per annum on paid-up capital.

886. In the quarter ended 31st March, 1892, the circulation of Note circubank notes ranged from £1 14s. 4d. in Western Australia to 18s. 4d. Australasian per head in Tasmania; the proportion in Victoria being £1 3s. 4d.,

and in the whole of Australasia £1 6s. 9d. The following are the figures for the different colonies:—

Bank Note Circulation in Australasian Colonies, 1892.

Colony.		Estimated Population on	Bank Note Circulation (First Quarter of 1892).		
		31st December, 1891.	Total. Per He of Popula		
			£	£ s. d.	
Western Australia		53,285	91,368	1 14 4	
New Zealand		634,058	975,611	1 10 9	
South Australia	• • •	325,766	462,565	1 8 5	
Queensland		410,330	579,824	1 8 3	
New South Wales		1,165,300	1,611,672	1 7 8	
Victoria		1,157,678	1,351,799	1 3 4	
Tasmania	• • •	152,619	139,916	0 18 4	
Total .	• • •	3,899,036	5,212,755	1 6 9	

Note circulation in United Kingdom.

887. At the end of 1891 the average note circulation was only 18s. 11d. per head in England and Wales, whereas it was as high as £1 15s. 8d. in Scotland, and £1 9s. 8d. in Ireland. In the United Kingdom, as a whole, the paper currency was more than  $41\frac{1}{2}$  millions sterling, the proportion per head being £1 2s. It will be remembered that whilst the lowest denomination of bank notes in England and Wales is five pounds, in Scotland and Ireland, as in the Australasian colonies, it is one pound:—

BANK NOTE CIRCULATION IN THE UNITED KINGDOM, 1891.

	Estimated	Bank Note Ci December	
Division.	Population. (000's omitted.)	Total. (000's omitted.)	Per Head of Population.
England and Wales Scotland Ireland	4,041,	£ 27,465 7,205, 6,947,	£ s. d. 0 18 11 1 15 8 1 9 8
United Kingdom	. 37,803,	41,617,	1 2 0

Savings banks.

888. Two kinds of savings banks exist in Victoria, the General Savings Banks, which were first established in 1842, and the Post Office Savings Banks, which were established in 1865. The following figures show the number of institutions, the number of depositors having accounts at the last dates of balancing in 1891, and the total and average amount of depositors' balances at such dates*:—

^{*} The financial year of the Post Office Savings Banks terminates on the 31st December, that of the Ordinary Savings Banks on the 30th June.

#### SAVINGS BANKS, 1891.

		Number	1		ining on Deposit.		
Description of Institution.		of Savings Banks.	Number of Depositors.	Total.	Average to each Depositor.		
Post Office Savings Banks General Savings Banks		370 18	107,671 193,110	£ 2,083,203 3,632,484	£ s. d. 19 6 11 18 16 2		
Total		388	300,781	5,715,687	19 0 1		

889. In the twenty years 1872 to 1891, the number of depositors savings in savings banks has increased sixfold. For several years prior to banks, 1872 to 1891. 1880 the amount standing to the credit of the depositors had been tolerably uniform, but since then a steady increase has taken place, and by 1891 it had risen to nearly  $5\frac{3}{4}$  millions sterling, or £453,600 more than in the previous year, about 2 millions more than in 1887, and nearly three and a half times the amount in 1880—eleven years previously. The average amount to each depositor was highest in 1872 and lowest in 1887, the proportion of the latter being £1 2s. 3d. less than in the year under review. The following is a statement of the number of depositors and the amount remaining on deposit during the period referred to:—

SAVINGS BANKS, 1872 TO 1891.

Rate of interest in savings banks.

890. The highest rate of interest savings banks are permitted to give on moneys left on deposit is 4 per cent., which rate was paid in Interest is allowed on the minimum monthly balance, all the years. but not on any amounts which do not remain in the savings banks for a full month.

Male and female

891. In the General Savings Banks, the male depositors in 1891 depositors. numbered 106,637, and the female depositors 86,473, or about 81 of the latter to 100 of the former. In the general population the proportion of females per 100 males is 91, so that relatively to their respective numbers females do not appear to use the savings banks as much as males.

Small depositors.

892. Nearly four-fifths of the depositors in General Savings Banks have less than £20 to their credit, and nearly a tenth have between  $\pounds 20$  and  $\pounds 50$ .

Savings banks in

893. The deposits in the General Savings Banks of Melbourne and melbourne. suburbs amount to over three-fifths of the whole, and the depositors to about two-thirds.

Savings banks in Australasian colonies.

894. The following is a statement of the number of depositors and their proportion to population, also the total and average amount standing to their credit in the savings banks of the various Australasian colonies at the end of 1890:—

### Savings Banks in Australasian Colonies, 1890.* (Including both General and Post Office Savings Banks.)

,	Number of	Depositors.	Amount remaining on Deposit.			
Colony.	Total.	Per 100 of Population.	Total.	Average to each Depositor.		
			£	£ s. d

Total	695,506	18.37	17,571,303	25 5		

^{*} For later figures see Australasian Statistics for 1891, in Appendix to the second volume.

[†] These figures relate to the 31st December, both for General and Post Office Savings Banks, and therefore differ slightly from the figures given in the table following paragraph 889 ante.

895. In Victoria the rate of interest paid in both descriptions of Rate of savings banks is 4 per cent., as already stated, but the rate paid in the other Australasian colonies is often higher than in Victoria. Thus, in New South Wales, whilst the rate in the Post Office Savings Banks is 4 per cent., as in Victoria, that in the General Savings Banks is 5 per cent. for accounts remaining open at end of year, only 4 per cent., however, being allowed on closed accounts; in Queensland the rate is 4 per cent. on deposits below £200; in South Australia it is 5 per cent.; in Tasmania the rates are 5 per cent. on sums up to £150 in the General, and  $3\frac{1}{2}$  per cent. in the Post Office Savings Banks; and in New Zealand they are 5 and  $4\frac{1}{2}$  per cent. respectively. On the other hand, the rate is only  $3\frac{3}{4}$  per cent. in Western Australia.

interest in Australasian savings banks.

896. In proportion to population, the number of depositors is order of greatest in Victoria, and the next in South Australia, in both of which the proportion is much higher than in the other colonies. following is the order of the colonies in this respect:—

colonies in respect to proportion of depositors to population.

#### Order of Colonies in reference to Proportion of Depositors IN SAVINGS BANKS TO POPULATION.

- 1. Victoria.
- 2. South Australia.
- 3. New Zealand.
- 4. Tasmania.

- 5. New South Wales.
- 6. Queensland.
- 7. Western Australia.

897. Judged by the average amounts to the credit of depositors, Order of the savings banks of Queensland, New South Wales, and South Australia appear to attract the larger investors in a greater degree than any of the other colonies; but those of Victoria, more than any other colony, except Western Australia, appear rather to attract persons of small means, for whom savings banks are specially estab-The following is the order of the colonies in reference to the average balance lying to the credit of each depositor:—

colonies in respect to average amount of deposits.

Order of Colonies in reference to Average Balance of DEPOSITORS IN SAVINGS BANKS.

- 1. Queensland.
- 2. New South Wales.
- 3. South Australia.
- 4. New Zealand.

- 5. Tasmania.
- 6. Victoria.
- 7. Western Australia.

Savings banks of United Kingdom. 898. The amount lying to the credit of depositors in the savings banks of the United Kingdom about the end of 1890 was £111,285,911, of which £43,650,552 was in Trustee Savings Banks, and £67,635,359 in Post Office Savings Banks; and the number of accounts remaining open in 1889-90 was 6,043,591, viz., 1,535,782 in Trustee, and 4,507,809 in Post Office, Savings Banks—an average of £18 8s. 3d. per depositor; whilst the proportion per head of population was £2 18s.

Savings banks of European countries. 899. By the following figures relating to the savings banks of the United Kingdom, France, Belgium, and Holland, it will be noticed that, in proportion to population, the depositors are much more numerous in Victoria and South Australia than in any of those countries; whilst in point of average value the deposits in all the Australasian colonies except Western Australia are greater than in any of them—the average value in Victoria, however, being only slightly above that in the United Kingdom and France:—

SAVINGS BANKS OF CERTAIN EUROPEAN COUNTRIES, 1890.

	Number of 1	Depositors.	Amount Remaining on Deposit.			
Country.	Total.	Per 100 of Population.	Total.	Average per Depositor.		
			£	$\pounds$ s. d.		
France	7,262,726	18.94	132,787,212	18 5 8		
United Kingdom	$\dots$ 6,043,591	15.86	111,285,911	18 8 3		
Belgium	731,057	11.89	13,016,616	17 16 1		
Holland	281,870	6.18	1,770,875	6 5 8		

Note.—The Post Office and Trustee Savings Banks are given for the United Kingdom, the State Savings Banks only for Belgium and Holland; whilst Private are included with State Post Office Savings Banks in the case of France. In 1888, there were 297,682 depositors, and £4,815,000 on deposit, in the Private Savings Banks of Holland.

Life assurance.

900. The substance of the following table, which embodies the returns for 1890 and 1891 of the Life Assurance Companies whose head offices are in the Australasian colonies, has been taken from the Australasian Insurance and Banking Record.* It contains a summary of the results of eleven offices, one of which is the Government Life Insurance Department of New Zealand, the remainder being proprietary or mutual companies. It should be mentioned that there are many English, and three large American, offices also doing business in Australasia, but no returns are available of the local business done by these institutions:—

Life assurance in the United Kingdom.

910. In 1889 the total income of the ordinary life assurancecompanies doing business in the United Kingdom (exclusive of American companies) amounted to £22,242,000, of which £6,528,000 was from interest, £14,213,000 from premiums, and £1,276,000 from sales of annuities; and their working expenses amounted to £2,040,000, or about 9 per cent. of the receipts. The claims satisfied during the year amounted to £10,627,000, and £797,000 was paid to annuitants; the amount paid as cash bonuses or allowed in reduction of premiums was £999,000; for surrender, £819,000; and as dividends, etc., to shareholders, £593,000.

Price of debentures Melbourne.

911. The following, according to the Australasian Insurance and and stock in Banking Record, were the prices in Melbourne of Victorian debentures.

^{*} Offices distinguishing between Fire and Marine business only.

[†] Offices which do not distinguish between Fire and Marine Insurance.

payable thereat, and of Victorian stock,* at the dates named. It will be seen that, although 4 per cent. stock had hitherto been uniformly quoted at par, the price fell to less than  $99\frac{1}{2}$  in July, 1892.

1892 (May)		$106\frac{3}{4}$	98	3 13 9	3 13 5	4 1 5	

^{*} See footnote ( $\parallel$ ) on page 521. † Taken from Weekly Official Intelligence. ‡ Repayable at option of the Government at any time between the years named.

§ Allowing for accrued interest, and redemption at par on maturity, the former being assumed to be equal to half a year's interest.

After allowing for expenses of floating loans, which adds about 1s. 3d. to the interest. See table following paragraph 427 ante.

914. It will be observed that, according to the highest quotations Yield to on the London Stock Exchange, the interest yield to investors in Victorian securities fell from over  $3\frac{3}{4}$  per cent. in 1885 to a little over  $3\frac{1}{4}$  per cent. in 1889, but again rose to about  $3\frac{1}{2}$  per cent. in 1891; whilst a further rise of about a sixth per cent. occurred in 1892. comparing the amounts in the last column in the table with those in the two preceding ones, it will be found that the colony, when raising a loan, has as a rule to pay about one-quarter  $(\frac{1}{4})$  per cent. more than is received by British investors on similar securities at maximum prices.

investors in Victorian securities in various

915. Evidence of the improved credit of the Australasian colonies Prices of is to be found in the circumstance, not only that their stocks have asian stock risen in price in the London market, but all of them, except Western Australia, have succeeded in floating loans at as low a rate as  $3\frac{1}{2}$  per The sudden rise in Australasian stocks in 1888 and 1889, together with the causes which led up to it, was described in a previous edition of this work.* Since 1889, when the prices were at a maximum, there has, however, been a falling off, although the prices are still invariably higher than they were prior to 1888. mean of the highest and lowest rates quoted in the official list, the price of the Victorian 4 per cents fell from 112 in 1889 to  $105\frac{1}{2}$  in 1891, and that of New South Wales from  $115\frac{3}{4}$  to  $109\frac{3}{8}$ ; whilst the  $3\frac{1}{2}$ per cents. of the same colonies fell from  $103\frac{3}{4}$  to 97, and from  $103\frac{1}{2}$ to 99 respectively. In 1892, moreover, a still further depreciation took place in these as well as in all the other Australasian stocks, Victorian  $3\frac{1}{2}$  per cents, once falling as low as 91, although the latest quotations indicate a recovery to about  $92\frac{1}{2}$ . This recent fall in the prices of Australian securities is probably only of a temporary nature, and can hardly be due to any loss of confidence in the high character entertained of these securities, but to a severe crisis in London, consequent on heavy losses in South American securities. The following are the prices for the principal stocks of the Australasian colonies in the years 1887 to 1892, the highest prices only being quoted for the earlier, and the highest and lowest prices for the later, year:—

^{*} See Victorian Year-Book, 1889-90, Vol. I., paragraph 891. See also paragraph 432 ante.

PRICES OF STOCK OF THE AUSTRALASIAN COLONIES IN LONDON, 1887 то 1892.

Note.—The stocks referred to are all "inscribed," except those of Canada, which are "registered."

917. According to Burdett's Official Intelligence for 1892, the par value of value of all Colonial and Provincial Government securities dealt with on the London Stock Exchange at the end of 1891 was £253,039,785; and it was calculated that, at the end of 1891, the market value of £70,791,000 of these securities was £72,632,000, as compared with £73,974,000 at the end of 1890, and £76,017,000 at the end of 1889. The excess above the par value was thus  $2\frac{3}{5}$  per cent. in 1891, as against  $4\frac{1}{2}$  per cent. in 1890, and  $7\frac{1}{2}$  per cent. in 1889; but in connexion with this it should be borne in mind that most of the securities were disposed of in the first instance at a discount.

securities in London.

918. The following table contains a statement of the number and Mortgages, amount of mortgages on land and live stock, and of preferable liens releases. on wool and growing crops, effected during 1891, also the number and amount of releases registered in that year. It should be mentioned

^{*} After allowing for accrued interest, and repayments at par on maturity; the former assumed to be equal to half a year's interest when interest is payable half-yearly, and to one quarter's interest when it is payable quarterly.

[†] Bearing  $2\frac{3}{4}$  per cent. interest until 1903, then  $2\frac{1}{2}$  per cent.; redeemable 1923 or subsequently.

[‡] Interest payable quarterly; half-yearly in all other cases.

[§] Repayable at option of Government at any time between the dates named.

^{||} See Bankers' Magazine, 1892, page 237.

that the figures do not express the full amounts secured and released, as the amounts were frequently not given,* especially in the case of live stock released:—

1880	 10,722	5,615,401	1891	•••	15,471	16,454,628

Mortgages and liens, 1891 and former years. 920. It will be observed that in the last fourteen years the amount secured under mortgage fell to the lowest point in 1883, and reached by far the highest point in 1889, when it was  $2\frac{1}{2}$  millions larger than in

^{*}Assuming that the average amount was the same in all cases as in those for which the information was returned, the following would be the total amounts:—Mortgages of land—under Transfer of Land Statute, £15,233,400; under old system, £2,934,300. Releases of land—under Transfer of Land Statute, £6,708,100; under old system, £1,249,600.

[†] This amount relates to only a few releases; the particulars were not stated in the great majority of cases.

either 1890 or 1891, and over 2 millions larger than in 1888. number of mortgages did not vary much in the last three years, in each of which they were far larger than in any year prior to that period.

921. In 1891, the number of releases of mortgages on land and the Proportion amounts paid off were equal to about 61 and 45 per cent. respectively of the number of mortgages effected and the amounts lent thereon, as compared with 66 and 53 per cent. respectively in the previous year. The number of releases of live stock is small as compared with the number of mortgages, and of liens on wool and crops only six releases were registered; the reason being, in regard to these descriptions of property, that, although the mortgage or lien may be paid off, the mortgagor seldom takes the trouble to protect himself by a registered release.

- 922. The live stock mortgaged in 1891 consisted of 1,091,936 Live stock mortgaged. sheep, 38,079 head of cattle, 5,039 horses, and 1,774 pigs. stock released consisted of 1,600 sheep, 250 cattle, and 11 horses.
- 923. During the thirty-one years ended with 1891, the sums Difference advanced on mortgage of landed property amounted in the aggregate to £183,570,576, and the sums paid off amounted in all to £93,777,089. The balance is £89,793,487, or nearly half the amount originally advanced. Part of this balance represents the amount of mortgages still outstanding, and part the amount in default of payment of which properties have passed from the mortgagor either by foreclosure or sale.

924. In 1891, the number of bills of sale filed was more numerous Bills of sale. than in 1890 by 62, about the same as in 1889, and more numerous than in any other year since 1876. The amount secured under such instruments fell off considerably in 1891 as compared with the three previous years, when it averaged over one million sterling. In 1891 the amount was little more than three-quarters of a million, which, however, was a much larger amount than that secured in any other year since 1875, except the three just referred to. The following are the number and amounts of those filed and satisfied in each of the last eighteen years:-

between mortgages. leases, 1861 to 1891.

Decrease in

925. The decrease in the number and amount of bills of sale filed bills of sale in 1877 and subsequent years was chiefly owing to the law relating to such securities having been made more stringent under Act 40 Vict. No. 557, which came into force during 1877, which rendered it necessary to give 15 days' notice to the Registrar-General previous to any bill of sale being filed, during which period any creditor may lodge a caveat against its registration.

Contracts for sale and letting.

926. The contracts for sale and amount secured thereby, also the contracts for letting, and extremes within which the rent named therein ranged, filed with the Registrar-General under Act 40 Vict. No. 557,* during the last fifteen years, were as follow:—

CONTRACTS FOR SALE AND LETTING, 1877 TO 1891.

927. It would seem that contracts for sale and letting appeared Fluctua. at first to be more convenient for the security of the creditor without contracts injuring the credit of the person giving the security than bills of sale, and letting. as they increased very rapidly from 1877, than being the year in which the Act legalizing their registration came into operation, until 1880, whilst the bills of sale largely decreased. In the last five years, however, there has been a decided falling-off in the number and amount of these contracts as compared with previous years, whilst there has been more than a corresponding increase in the number and amount of bills of sale.

928. Building societies in Victoria date from an early period in Building the colony's history, and much success both to borrowers and investors has attended their operations. Sixty such institutions sent in returns during 1891, as against 70 in 1890, and 72 in 1889 following are the principal items furnished for the last three years. It should be mentioned that the returns of some of the societies were not perfect:-

Building Societies, 1889 to 1891.

Repayments during the year	 £2,345,843	£2,335,331	£2,150,160
Working expenses during the year	 £92,984	£79,597	£ $68,463$
Bank overdraft at end of the year	 £264,409	£194,532	£309,731
Deposits at end of the year	 £5,062,328	£5,285,702	£4,439,625

^{*} Exclusive of the returns of the Premier Permanent Society, which suspended payment on the 21st December, 1889, and has since been in liquidation. In 1888 this institution had a paid-up capital of £264,492, and deposits amounting to £780,186.

Advances by building societies, 1876-1891.

929. In 1891, the business done by building societies, as measured by the advances made, was less than in the previous year by £366,500, was not half as large as that done in 1888, and was also less than in any other year since 1884. A run upon building societies, towards the end of 1891, affected those institutions disastrously, several large societies and a number of the smaller ones being obliged to close their doors. The advances made by these institutions during the last sixteen years have been as follow:—

Advances by Building Societies, 1876 to 1891.

			£	1		${f \pounds}$
1876	• • •		870,203	1884	• • •	 1,469,542
1877			815,860	1885		 2,073,189
1878	• • •		703,932	1886	• • •	 2,358,729
1879			489,312	1887		 2,544,688
1880	• • •		<b>5</b> 64,411	1888		 4,381,330
1881			805,551	1889		 3,264,984
1882			<b>1,04</b> 0,965	1890		 2,426,127
1883	•••	•••	1,089,480	1891		 2,059,627

Rates of interest in building societies.

930. The rates of interest allowed by building societies on moneys left with them for a period of twelve months generally ranged, in 1883 from 5 to 7 per cent.; in 1884 from  $5\frac{1}{2}$  to 7 per cent.; in 1885 and 1886 from 6 to 7 per cent.; in 1887 from  $5\frac{1}{2}$  to  $7\frac{1}{2}$  per cent.; in 1888 from  $5\frac{1}{4}$  to 7 per cent.; in 1889, 1890, and 1891 from  $5\frac{1}{2}$  to 7 per cent. Most of the societies allow interest on the daily balance on deposit in current account, the rates ranging from 3 to 5 per cent.

Deposits
with
building
societies.

931. The sums deposited with building societies at the end of 1891 amounted in the aggregate to £4,439,625, or £622,703 less than was on deposit at the end of 1889, and £846,077 less than at the end of 1890.

Total moneys on deposit.

932. The following is a statement of the total amount of moneys on deposit at or about the end of each of the last five years with banks of issue, savings banks, and building societies. Other institutions, such as deposit banks, and some of the insurance companies also receive deposits; but of these no returns are furnished:—

Moneys on Deposit at end of Years 1887 to 1891.

Amount deposited with—	1887.	1888.	1889.	1890.	1891.
Banks Savings banks Building societies	£ 35,215,547 3,696,699 4,216,758	£ 37,570,838 4,669,541 5,292,364	£ 38,768,936 5,021,523 5,062,328	$\pounds$ $40,292,065$ $5,262,105$ $5,285,702$	£ 40,416,067 5,715,687 4,439,625
Total	43,129,004	47,532,743	48,852,787	50,839,872	50,571,379

933. According to the table, the moneys on deposit about the close Moneys on of the last year amounted in the aggregate to over  $50\frac{1}{2}$  millions deposit, sterling, or over  $\frac{1}{4}$  million less than in the previous year, and nearly  $7\frac{1}{2}$  millions more than in 1887, four years previously. There is no doubt, however, that in all the years some of the savings banks' money, and a portion of that deposited with building societies, is re-deposited with the banks, and thus counted twice over; but considering there are many institutions for the receipt of deposits from which no returns are obtained, it is not at all likely that the whole amount at deposit is less than that stated in the table.

934. A decrease of about  $41\frac{1}{4}$  millions, or 13 per cent., took place Melbourne in the amounts passed through the Melbourne Clearing House in House. 1891, as compared with 1890; the amount was, moreover,  $14\frac{1}{2}$  millions below that in 1889, and 53 millions below that in 1888, which will be memorable as a year of unusual speculation and inflation. Particulars respecting the clearances during the seven years ended with 1891 are given in the following table:—

Melbourne Clearing House.—Transactions, 1885 to 1891, (000's omitted.)

		Clearan	ces.	Amount cleared.			
Year.	Ву І	Exchange of Instrum	ents.	By Payments	Ma tal	Weekly	
	Notes. Cheq	Cheques, Bills, etc.	Total.	in Coin. Total.		Ave- rage.	
	£	£	£	$\pounds$	£	£	
1885	16,776,	129,213,	145,989,	21,097,	167,086,	3,213	
1886	17,431,	134,566,	151,9:47,	20,842,	172,839,	3,324	
1887	19,086,	157,614,	176,700,	25,508,	202,208,	3,889	
1888	28,293,	261,698,	289,991,	37,128,	327,119,	6,291	
1889	26,564,	231,180,	257,744,	30,672,	288,416,	5,546	
1890	26,568,	255,233,	281,801,	33,389,	315,190,	6.061	
1891	21,831,	223,628,	245,459,	28,468,	273,927,	5,268	

Note.—In this table the two sides of the clearance are considered as one transaction. If the receipt and the payment should each be considered as a separate transaction, the amounts would obviously have to be doubled.

Carriers on railway (not railway construction)	2,849	249	6,794	854

Note.—The classification of occupations for 1891, as shown in this table, differs from that in the subsequent tables, it having been specially prepared for the purpose of affording means of comparison with the classification adopted in 1881. A line much affected by this change is that relating to officers of general government, who, when performing duties of a special, technical, or professional nature, have, in the general classification for 1891, been classed according to their employment without reference to their official position, and are therefore placed under a number of heads, instead of being for the most part grouped under one head as in this table.
